b. Histogram
c. Normal curve
d. Distribution

30. The reliability of a measuring tool has the following aspect except
    a. Stability
    b. Internal consistency
    c. Efficiency
    d. Equivalence
31. . The stability index of a measuring tool is derived through proce-dures that evaluate
    a. Interrater reliability
    b. Internal consistency
    c. Crombach's alpha
    d. Test-retest reliability
32. Cardiac patients who receive support from former patients have less anxiety and higher self-efficacy than other patients.This statement is an example of
    a. Directional hypothesis
    b. Non directional hypothesis
    c. Statistical hypothesis
    d. Null hypothesis
33. What is true about research hypothesis
    a. States there is no relationship between the variables
    b. Statement about the expected relationship of the variables
    c. States a negative relationship between the variables
    d. Research hypothesis should always be directional
34. Hypothesiss sometimes called
    a. Exploratory data analysis
    b. Power analysis
    c. Deductive reasoning
    d. Confirmatory data analysis
35. When considering levels of significance, critical value of z corre-sponding to the alpha level of 0.05 is
    a. 0.001
    b. 1.96
    c. 2.58
    d. 3.29
36. The test's probability of correctly rejecting the null hypothesis is stated by
    a. Significance level of a test (a)
    b. Effect size

c. **Power of a test (1-β)**
d. Z=(xbar-μ)/(δ/n)

37. The standard deviation of a sampling distribution is referred to as
    a. Test statistic
    b. Standard error
    c. Confidence interval
    d. Test of significance
38. The most common type of composite scale is
    a. Likert scale
    b. Visual analog scale
    c. Checklist
    d. Thurstone scale
39. Which of the following is not a procedure for establishing con-struct validity of an instrument?
    a. Known group technique
    b. Factor analysis
    c. Multi-trait-multi-matrix
    d. Cronbach's alpha
40. Multi-trait multi -matrix (MTMM) is a procedure developed to establish
    a. Internal consistency
    b. Interrater reliability
    c. Construct validity
    d. Content validity
41. The adequacy of an instrument in differentiating between the per-formance or behaviour in some future criterion is termed as
    a. Predictive validity
    b. Concurrent validity
    c. Content validity
    d. Construct validity
42. Which of the following is not a type of validity index of a research instrument?
    a. Validity
    b. Construct validity
    c. Content validity
    d. Predictive validity
43. The Spearman's Brown formula is used to estimate
    a. Test-retest reliability
    b. Internal consistency
    c. Equivalence

    d. Validity
44. Data collection about everyone or everything in group or population and has the advantage of accuracy and detail is
    a. **Census**
    b. Survey
    c. Probability sampling
    d. Cluster sampling
45. A sampling method which involves arandom start and then pro-ceeds with the selection of every nth element from then onwards (where n= population size/sample size) is
    a. Simple random sampling
    b. Stratified random sampling
    c. **Systematic sampling**
    d. Snowballl sampling
46. Considerations for choosing sample size include:
    a. The degree of precision required
    b. Method of sampling
    c. Way in which results will be analyze
    d. **All of the above**
47. In a student's research study, his first assignment was to determine the effect of alcohol consumption on students' academic performance. What should be his dependent variable
    a. Effect of alcohol
    b. Alcohol consumption
    c. **Level of academic performance**
    d. Students'individual effort

Situation: To determine the effect of folic acid and fersolate in the pre-vention of anaemia in pregnancy, a group of pregnant women were given the drugs routinely while the others were advised on diet alone. (Questions 48-50 refer to this situation).

48. The pregnant women given the drugs are referred to as
    a. Randomized group
    b. Sample group
    c. **Experimental group**
    d. Control group
49. The pregnant women advised on diet only are referred to as the
    a. Intervention group
    b. Research group
    c. **Control group**
    d. Experimental group

50. The independent variables in this study were
    a. Folic acid and fesolate
    b. Anaemia in pregnancy
    c. Pregnant women
    d. Health education on prevention of anaemia.
51. Hypothesis formulation is
    a. An assumption or tentative solution to a problem that is yet to be tested or verified
    b. An accurate solution to a problem to be researched upon or verified
    c. An exploit answer to a problem to be researched upon or veri-fied
    d. A statement of problem that needs solution
52. Research as a process provides a way of
    a. Thinking
    b. Reading
    c. Writing long essay
    d. Differentiation between good and evil
53. In a study to determine the relationship between birth control pill usage and parity, the population of interest is
    a. Adult women
    b. Multiparous women
    c. Women of child bearing age
    d. Married couples
54. The difference between the highest and the lowest score in a dis-tribution is
    a. Mean
    b. Standard deviation
    c. Range
    d. Median
55. In statistics, mean is symbolized as
    a. S
    b. £
    c. 又
    d. Y
56. Graphical representation of data may involve the use of the follow-ing except
    a. A chart
    b. Histogram
    c. Tables
    d. Polygon
57. Coding of data refers to

a. Division of raw data
b. Multiplication of raw data
c. Cross tabulation of raw data
d. Classification of raw data

58. The most important criterion for measuring variable is
    a. Validity
    b. Feasibility
    c. Sensitivity
    d. Meaningfullness
59. The following are the sources of research problem except
    a. Daily experience
    b. Beliefs
    c. Literature review
    d. Deduction from theory.
60. The group which is of interest to the researcher is referred to as
    a. Sample
    b. Target population
    c. Study group
    d. Accessible population
61. Probability samples are those that
    a. Have the possibility of bias
    b. Eliminate all errors
    c. Reduces chances of individuality
    d. Eliminate the possibility of bias

62. The most suitable research design to establish cause and effect relationship is
    a. Survey
    b. Descriptive study
    c. Experimental study
    d. Correlation study
63. The most appropriate research design used for studying variables in their natural setting is ______research design
    a. Quasi experimental
    b. Descriptive
    c. Case study
    d. Experimental
64. The first problem you face as a potential researcher is how to.
    a. State the background of the study

b. Carryout the selected study
c. Select a research problem or topic
d. State the identified problems

65. The statement in research where problem must be clearly defined and stated in researchable form refer to
    a. Systematic approach
    b. Objectivity in research
    c. Accuracy in research
    d. Plan
66. In research, a person with special knowledge of experti in par-ticular area is known as
    a. Author
    b. Experienced
    c. Authority
    d. Intelligent
67. Research done for the purpose of acquiring knowi as
    a. Applied
    b. Empirical
    c. Basic
    d. Educational
68. Variables that lie outside the interest of the researcher but could have significant on the study are called
    a. Dependent variables
    b. Continuous variables
    c. Extraneous variables
    d. Criterion variables
69. The factor that is manipulated by the researcher to find out what will happen is known as
    a. Independent variable
    b. Dependent variable
    c. Intervening variable
    d. Extraneous variable
70. We specify the population and take a sample because
    a. It is scientifically acceptable to take a sample
    b. It is not necessary to study the entire population
    c. It is not always feasible to study the entire population
    d. It is impossible to study the entire population.
71. Applied research can be summarised as
    a. Systematic control of information from various sources
    b. Using new facts in a controlled way

   c. **Finding answers to problems in a systematic manner**
   d. Finding new ideas and relationship

72. If a researcher obtains positive results with respect to a hypothesis, one can state that the results ______the hypothesis
   a. **Verify**
   b. Prove
   c. Confirm
   d. Support
73. Confidentiality in the conduct of research implies all except
   a. **The investigator cannot link a subject with the information in a research work**
   b. The investigator is able to identify the subject's response but promise not to
   c. Respondents are considered anonymous
   d. The investigator agrees with the subject of the need to share observation or information
74. Increase in salary is positively related to job satisfaction is an exam-ple of
   a. Null hypothesis
   b. **Alternative hypothesis**
   c. Non hypothesis
   d. Negative hypothesis
75. Historical research deals with enquiry into
   a. **Events,experience and discoveries of the past**
   b. Events, experience and discoveries of both present and the past
   c. Events, experience and discoveries of the future
   d. Events, experience, and discoveries of the present, past and future
76. Which of the following methods of solving problems rest its case for superiority?
   a. Method of Tenacity
   b. Method of Authority
   c. **A priori Method**
   d. Scientific Method
77. Researchers have a duty to avoid, prevent or minimize risk to study participants. This is based on the principle of
   a. Human right
   b. **Non-Maleficence**
   c. Beneficence
   d. Justice
78. The principle underpinning voluntary and informed consent is
   a. Beneficence
   b. **Autonomy**

c. Non-Maleficence
d. Respect

79. A researcher plans to interview parents who have had a stillbirth child.The researcher has another plan of action knowing that talking about this event may cause distress. The principle underlying this plan is that of
    a. Maleficence
    b. Self determination
    c. Autonomy
    d. Non-Maleficence
80. Which of the following stages of the nursing process is similar to the focus of the research and the research aim?
    a. Assessment
    b. Planning
    c. Implementing
    d. Evaluating
81. Clinical effectiveness is about which of the following
    a. Introducing new clinical procedures into practice
    b. Undertaking research in order to determine effective out-comes
    c. **Getting evidence of what works into everyday clinical practice and evaluating its effect** on patient care
    d. Evaluating the best evidence
82. How would you define research process?
    a. The researcher's plan of action to be followed when carrying out research
    b. A method of collecting research data
    c. The stages or steps the researcher follows during a research project
    d. The account of a study the researcher will write at the end of the study
83. The research process can be compared to which of the following?
    a. Atrain timetable
    b. The spine of a skeleton
    c. The problem-solving process
    d. Nursing theories
84. ______Is an area of statistics in which conclusions about a large bedy of data are reached by examining only part of those data
    a. Inferential
    b. Descriptive
    c. Probability
    d. Explanatory

85. A sampling method where each element in a population is chosen at randam and has a known, non-zero chance of selection is called
    a. **Probability sampling**
    b. Purposive sampling
    c. Non-probability sampling
    d. Systematic sampling
86. ______Is a list of the members of the population under inves-tigation and is used to select the sample
    a. **Sampling frame**
    b. Quota
    c. Strata
    d. Variable
87. Correlation of present scores with some other observation of pres-ent behavior is a criterion for
    a. Predictive validity
    b. **Concurrent validity**
    c. Content validity
    d. Construct validity
88. In an experiment to find out if taking ginseng increases IQ scores, the IQ scores would be
    a. Independent variable
    b. Control variable
    c. Extraneous variable
    d. **Dependent variable**
89. Students who do better in mathematics tend to do better in phys-ics. This is an Example of
    a. Negative correlation
    b. Zero correlation
    c. **Positive correlation**
    d. Perfect correlation
90. The statistical technique that combines result of a large number of studies is called
    a. Experimental correlation
    b. Statistical linear analysis
    c. **Meta-analysis**
    d. Hypothetical analysis
91. Three major ethical concerns of a nurse researcher are deception, lasting harm to subjects,and
    a. Morality of the question under investigation
    b. Loss of future research possibilities

c. Falsified
d. Investigation

92. An experimenter conducts an experiment on the effects of a drug to control hallucinations. He declares the results to be "statistically significant," which usually means
    a. Even though appropriate statistics were used, no differences could be detected between experimental and control groups
    b. The result has important implications for theory and practice.
    c. Differences between experimental and control groups of this size occur by chance only
    d. Differences between experimental and control groups were so large,they could never occur by chance alone.

93. The two types of concepts are **Concrete** and **Abstract.**

94. **Hypothesis** is defined as a suggested answer to a problem.

95. Two types of observation used in data collection are **Participatory** and **Non Participatory**.

96. Four basic methods of data collection include **Observation** **Questionnaire**, **Biophysiologic** and **Record**.

97. Two main types of research are **Basic** and **Applied**.

98. In research ethics, the principle that talks about freedom from harm is **Non-Maleficence.**

99. **Stratified Sampling** subdivides the population into homogenous subsets from which appropriate number of elements is selected at random.

100. A plan specifying how element will be drawn from the population is known as **Sampling method.**
