

True/false

83. Explain the types of feeding

84. when and to whom are these alternative methods of feeding executed; cup feeding ,spoon feeding, tube feeding

85. Water forms about percentage of breast and it is important not to give water in hot weather and if the baby is thirsty

86. What do you do when the baby has hiccoughs.....

87. What is hormone is responsible for stimulation of milk secretion.....

a. Prolactin

b. Oxytocin

c. Aveolar

d. Acini

88. The hormones are produced by Pituitary

a. Posterior

b. Anterior

c. Lateral

d. Superior

89. Action of prolactin are suppressed by....

a. Testosterone and FSH

b. Estrogen and progesterone

c. Estrogen only

d. Progesterone only

90. Removal of at birth enables prolactin to activate-milk secretion in the acini cells.

91. what are the acini cells

92. Production of milk is higher at the

a. during pregnancy

b. after delivery

c. in the morning

e. At night

92..... is the release of the hormone oxytocin, which is involved in the milk ejection or let down reflex.

- a. Successful lactation
- b. Premature lactation
- c. Acination
- d. Ejection

93. The neuro endocrine reflex is also known as the

- a.milk ejection
- b. oxytocin response
- c. let up reflex
- e. Let down reflex

94. Oxytocin stimulates the contraction of the surrounding the aveolar

- a. Myo- endothelial cells

b. Myo – epithelial cells

c. Aveolar cells

d. Let down reflex cells

95. Hormonal imbalance affect the production of milk? True or false

96. Inadequate milk production and unsuccessful breast feeding may be due to

a. Imbalance hormones

b. Insufficient calorie intake

c.poor attachment or infrequent intake

d.incorrect suckling

97. What are the importance of breastfeeding to the ;mother,baby,family and community

98. Mention 4 disadvantages of breastfeeding

99. Name 4 methods of expressing breast milk

100. When a woman breastfeed a baby to whom she did not give birth is called.....

101. Name and describe 4 breastfeeding positions and their purpose

102. what are some of the nurses role in breastfeeding

103. explain breastfeeding and HIV

104. contraindications to breast feeding

105. Mentions 3 UNICEF and WHO recommendations to breastfeeding

106. Explain exclusive breastfeeding

107. breast milk is an important source of energy and nutrients in children aged
.....

108. Breastmilk can provide half or more of a child's energy needs between the age
.....

109. it can provide 1/3 of energy needs between between

110. differentiate between colostrum and matured breast milk based on appearance
, texture and colour

111. What is growth and development

112. Differentiate between growth and development in a table form

113. Importance of understanding growth and development in a child's health.

114. Factors affecting growth in children

115. Why is monitoring and development important

116. Average age for paediatric nursing in GHANA

117. Roles and responsibilities of a paediatric nurse

118. Which bible verse was growth stated

119. Mention the indicators of growth

120. Growth rate is rapid during all the following except

a. Prenatal

b. neonatal

b. Infancy

c. Adolescents

d. Childhood

121. Physical growth is minimal during

a. Childhood

b.adulthood

b. Neonate

c. Prenatal

122. Average length of newborn

a.55

b.50

c.60

d.65

123. Height is useful in determining if a child is stunted or short for age. True /false

124. The body height is increased by at the end of the 1st year and is doubled at the end of the 4th year.

125. Factors affecting child's height

126. Average weight of newborns

a. 2.5

b. 3.0

b. 4.0

d. 3.5

127. Why mothers do not always come for weighing
