

d. Mentum

79. The average age of closure of the anterior fontanelle is

a. 18 weeks

b. 6 weeks

c. 6 months

d. 18 months

80. The main cells found in the dermis of a human skin are

a. Melanocytesnocytes

b. Keratinocytes and fibroblast

c. Macrophages and melanocytes

d. Macrophages and mast cells

81. The following are true of human breast except

a. It is a modified sweat gland

b. The right breast is usually greater than the left in females

c. In the young females,the breast is conical in shape

d. The base extends from the lateral margin of the sternum to the mid axillary line

82. Fluid-filled sac found in connective tissue, usually in the area of joints is

a. Bursa

b. Callus

c. Epiphysis

d. Diaphysis

83. Number of cranial nerves in human is

a. 16

b. 12

c. 11

d. 24

84. Abducens nucleus 'cranial nerve (VI)' is located in the

a. Pons

b. Medulla

c. Cranial and spinal roots

d. Cerebellopontine angle

85. Olfactory nerve is

a. Both sensory and motor

b. Purely sensory

c. Purely motor

d. None of the above

86. Cranial nerves supplying the eyes are

a. 3,4,5

- b. 4,6,7
- c. 4,5,6
- d. 3,4,6**

87. Damage to _____ cranial nerve results in inability to shrug and weak head movement?

- a. Vagus nerve
- b. Accessory nerve**
- c. Glossopharyngeal
- d. Facial nerve

88. The fourth cranial nerve is the

- a. Trigeminal
- b. Abducens
- c. Trochlear**
- d. Facial

89. Which cranial nerve innervates the lateral rectus muscle of the eye?

- a. Oculomotor
- b. Trochlear
- c. Trigeminal
- d. Abducens nerve**

90. Trochlear nucleus of the trochlear cranial nerve is located in the

- a. Frontal
- b. Medulla oblongata
- c. Mid brain**
- d. Pons

91. The neurons of motor pathway control

- a. Stress reaction
- b. Organs and glands
- c. Involuntary muscles
- d. Voluntary muscles**

92. Basal ganglia or neostriatum include the following areas except

- a. Caudate nucleus
- b. Putamen
- c. Globus pallidus
- d. Amygdala**

93. A third space fluid shift is best described as

- a. Shift from Intracellular Fluid(ICF) to Extracellular Fluid(ECF)
- b. Shift from ECF to ICF
- c. Loss to space that is neither ECF nor ICF**
- d. Imbalance between ECF and ICF

94. Which of the following is an interstitial fluid?
- a. **Lymph**
 - b. Cerebrospinal fluid
 - c. Pericardial fluid
 - d. Plasma
95. Which of the following statements concerning the levels of structural complexity of human body is not false?
- a. are different type of cells that perform similar function
 - b. Organs are tissues of the same type that perform specific function
 - c. Cells are the smallest but dependent units of living matter
 - d. **Cells with similar structures and functions are found together**
96. The most abundant plasma proteins are
- a. Globulins
 - b. **Albumins**
 - c. Prothrombins
 - d. Fibrinogen
97. A nurse was assessing Mr Jones for anaemia and saw the PCV result as 30%, the nurse understands that the following are correct except
- a. PCV a proportion of RBCs to the plasma in a whole blood
 - b. Mr Jones is anaemic
 - c. **Mr Jones has a high haematocrit value**
 - d. Mr Jones might have been over hydrated
98. The nurse would call the primary care provider immediately for which of the following lab results
- a. Hgb=16g/dL for male client
 - b. **Hct=22% for female client**
 - c. WBC=9x10³/mL³
 - d. Platelets=200x10³/mL³
99. Which of the following is not true about Red blood cell count
- a. It provides an indirect estimate of blood's haemoglobin
 - b. **Its value is higher in female when compared to male**
 - c. It is the number of red blood cell per cubic millimeter of blood
 - d. It is low in bone marrow suppression
100. The term tonicity may also refer to the
- a. **Osmolality of a solution**
 - b. Osmolarity of a solution
 - c. pH of a solution
 - d. None of the above

101. Albumins are the most abundant plasma proteins
a. **True**
b. False
102. The process of blood cell formation is known as erythropoiesis
a. True
b. **False**
103. Red blood cells are produced mainly in the lymphoid tissues
a. True
b. **False**
104. The life span of normal red blood cell is about 120 days
a. **True**
b. False
105. An average red blood cell carries about 280 million haemoglobin molecules
a. **True**
b. False
106. Monocytes and lymphocytes are the two forms of granulocyte
a. True
b. **False**
107. The liver not the skin is the largest gland in the body
a. **True**
b. False
108. During inspiration in a normal condition, the following occur except
a. The volume of the lung increases
b. **The intrapulmonary pressure increases**
c. The diaphragm contracts
d. The intercostal muscles contract
109. Which of the following best facilitates expiration of air:
a. Increase in lung volume
b. Lung compliance
c. **Lung recoil**
d. Contraction of intercostal muscles
110. The right kidney is longer and more slender than the left kidney
a. True
b. **False**
111. The adenophysis consists of two parts in the adult, the pars distalis and the
a. **Pars intermedia**
b. Pars tuberalis
c. Lobus nervosa

- d. Infundibulum
- 112. Each of the following hormones is an amino acid derivative except
 - a. Epinephrine
 - b. Melatonin
 - c. Thyroxine
 - d. Glucagon**
- 113. When there is increased secretion of ADH,
 - a. Urine output increases
 - b. Osmotic pressure of the blood will increase
 - c. Urine output decreases**
 - d. Dehydration may result
- 114. The inferior thyroid artery is a branch of the
 - a. External carotid artery
 - b. Internal carotid artery
 - c. Subclavian artery**
 - d. Iliac artery
- 115. Calcitonin is a hormone secreted by
 - a. Pituitary gland
 - b. Thyroid gland**
 - c. Adrenal gland
 - d. Parathyroid gland
- 116. The major role of calcitonin in the body is to
 - a. Reduce blood calcium level when it is raised**
 - b. Increase the blood calcium level when it is low
 - c. Reduce the blood sugar level
 - d. Increase the blood sugar level
- 117. The following are hormones of the adrenal cortex except
 - a. Androgen
 - b. Mineralocorticoids
 - c. Glucocorticoids
 - d. None of the above**
- 118. Hormone are cleared from the plasma in the following ways except
 - a. Metabolic destruction by the tissues
 - b. Binding with proteins**
 - c. Excretion by the liver into the bile
 - d. Excretion by the kidneys into the urine
- 119. Hormone of the anterior pituitary gland does not include
 - a. Prolactin

- b. Follicle stimulating hormone
 - c. Growth hormone
 - d. Vassopressin**
120. The following are connective tissues except
- a. Bones
 - b. Neurons**
 - c. Blood
 - d. Cartilage
121. Columnar epithelium is formed by a single layer of cells shaped like
- a. A pear
 - b. Elongated cubes**
 - c. Football
 - d. Cylinder
122. The thickest chamber of the heart is the
- a. Right ventricle
 - b. Right atrium
 - c. Left ventricle**
 - d. Left atrium
123. The axillary artery is a continuation of the
- a. Internal carotid artery
 - b. Brachial artery**
 - c. Subclavian artery
 - d. Brachiocephalic
124. The heart weighs about _____ in a woman
- a. 280g
 - b. 310g
 - c. 225g**
 - d. 325g
125. The apex of the heart is about
- a. 20cm Heart
 - b. 15cm
 - c. 13cm
 - d. 9cm**
126. Cardiac Output $\times$ Peripheral Resistance is the
- a. rate
 - b. Blood pressure**
 - c. Cardiac cycle
 - d. Stroke volume

127. The circulation of blood from the right ventricle of the heart to the lung and back to the left atrium is called
- Circulation
 - Systemic circulation
 - Pulmonary circulation**
 - Coronary circulation
128. At rest, the healthy adult heart is likely to beat at a rate of
- 110-120bpm
 - 90-110bpm
 - 60-80bpm**
 - 100-120bpm
129. The superficial veins in the body include the following except
- Cephalic vein
 - Basilica vein
 - Axillary vein**
 - Median vein
130. Long term blood pressure control is mainly exerted by the
- Renin-angiotensin-aldosterone system**
 - Baroreceptors
 - Chemoreceptors
 - High centers in the brain
131. The minimum urinary output required to excrete body waste products is about
- 2000ml per day
 - 1500ml per day
 - 1000ml per day
 - 500ml per day**
132. The capacity of human bladder is rarely more than about
- 1200ml
 - 1000ml
 - 800ml
 - 600ml**
133. Anterior to bladder is the
- Cervix
 - Uterus
 - Symphysis pubis**
 - Urethra
134. The following are the composition of normal urine except
- Water

b. **Protiens**

c. Creatinine

d. Phosphates

135. The composition of the internal environment is tightly controlled and this fairly constant state is called **Homeostasis**.

136. The three basic components of a control system are **Detector**, **Control Centre** and **Effector**.

137. The average body surface area of a 70 kilogram human is about **1.8m²**.

138. The red blood cell indices that are used to determine the RBC size and Hb concentration include **Mean Cell Volume**.

139. Cardiac muscle is unique in that unlike skeletal muscle, it can generate an electrical impulse and contraction independently. This unique property of the heart is called **Automaticity/Autorhythmicity**.

140. There are two kinds of nephron found in human population, they are **Juxtamedullary** and **Cortical Nephron**.

141. T mammary glands consist of three types of tissues namely: **Glandular**, **Fibrous** and **Fatty Tissue**.

142. On the surface of the areola of female breasts are numerous sebaceous glands called **Montgomery Tubercles**.

143. A roughly triangular area extending from the base of the labia minora to anal canal is the **Perineum**.

144. The blood supply to the pancreas is through **Splenic** and **Mesenteric Artery**.

145. The PH of the vagina is maintained between **3.5 – 4.5 by Dordlein Bacteria**.

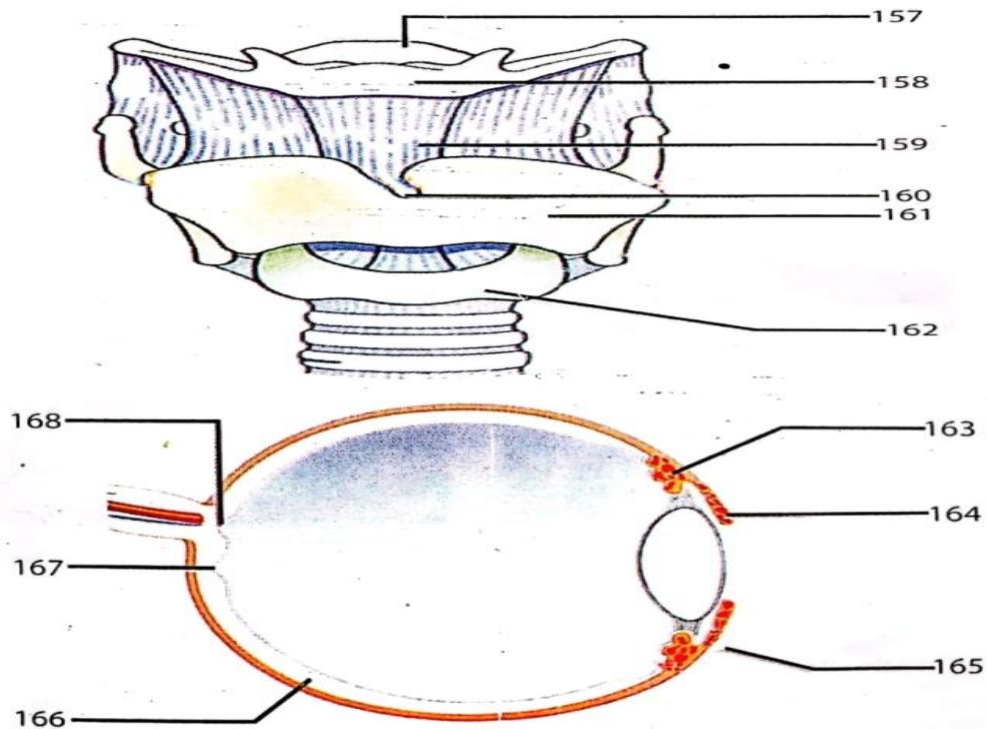

146. The hand is placed on the hip, it rests on the **Ilium**.

147. Bone is composed of **Cells**, **Proteins Matrix** and **Mineral Deposits**.

148. The two basic processes of ossification are Endochondral and Intramembranous Processes.
149. The cardiovascular system is divided for descriptive purposes into two main parts Circulatory System and Lymphatic System.
150. With the exception of the Pinna the structure that form the ear are encased within the petrous portion of the temporal bone.
151. Ceruminous glands are modified sweat glands that secrete Ear Wax.
152. The medial wall of the ear is a thin layer of temporal bone in which there are two openings are Oval Window and Round Window.
153. The three small bones that extend across the middle ear from tympanic membrane to oval window are Malleus/Hammer, Incus/Anvil and Stapes/Stirrup.
154. The normal number of cardiac cycles per minute ranges from 60 to 80.
155. The primary pacemaker of the heart is the Sinoatrial Node(SA Node).
156. The two hormones involved in the regulation of blood calcium level are Calcitonin and Parathormone.

DIAGRAMS

157. Epiglottis
158. Hyoid bone
159. Thyrohyoid membrane
160. Thyroid notch
161. Thyroid cartilage
162. Cricoid cartilage
163. Cilliary body
164. Iris
165. Canal of Schlemm(sclera venous sinus)
166. Retina
167. Macula lutea
168. Optic disc
