

- c. Yes, a breach of duty exists
  - d. Yes, foreseeability is present
44. Legal aspect of nursing is necessary as it makes the nurse understand her role better.  
The process by which a will of a deceased person is proved to be valid is called
- a. Testamentary capacity
  - b. Probate**
  - c. Codicil
  - d. Burden of proof.
45. A type of will written and sealed until death is termed
- a. Mystic
  - b. Holographic
  - c. Nuncupative**
  - d. Service man's will
46. A nursing theory is a group of concepts that form a pattern of reality. A concept can be defined as
- a. An idea**
  - b. An outcome
  - c. A philosophy
  - d. A process
47. A 20 year old man was recently admitted into the hospital. According to Erickson, which of the following stages of development is this adult in?
- a. Trust vs. Mistrust
  - b. Initiative vs. guilt
  - c. Autonomy vs. shame
  - d. Intimacy vs. isolation**
48. The theorist who believes that adaptation and manipulation of stressors are needed to foster change is
- a. Betty Neuman
  - b. Dorothea Orem
  - c. Martha Rogers
  - d. Sister Callista Roy**
49. Appearance and disposition of clients are best observed initially during one of the following
- a. Taking vital sign
  - b. Interviewing**
  - c. Implementation of the initial care
  - d. Actual physical examination.
50. To begin the nursing process, the nurse must first

- a. State the patient's nursing needs
  - b. Identify goals for nursing care**
  - c. Obtain information about the patient
  - d. Evaluate the effectiveness of nursing actions.
51. Plasma, the liquid constituent of blood is correctly identified by the nurse as
- a. Interstitial fluid
  - b. Intravascular fluid
  - c. Intracellular fluid
  - d. Intercellular fluid**
52. Blood pressure will be at its highest when the
- a. atria contract
  - b. Heart muscle is relaxed
  - c. Blood is pushed to the ventricle
  - d. Blood is pumped from the heart**
53. Parenteral nutrition provides nutrients to the patient by way of the
- a. Gastrostomy tube
  - b. Intravenous route**
  - c. Nasointestinal route
  - d. Jejunostomy.
54. A student nurse was carrying out urine analysis. She placed some fresh clear urine in a small beaker at room temperature. After sprinkling a little dry, fine, powder of flowers of sulphur on to the surface, the particles sink showing the presence of
- a. Albumin
  - b. Glucose**
  - c. Bile salt
  - d. Ketone bodies.
55. The test above performed by the student is properly called
- a. Fouchet's test
  - b. Hay's test**
  - c. Rothera's test
  - d. Benedicts test
56. A bed ridden patient who is blind is admitted to a health care facility from his or her home with pressure ulcers on the sacral area. A priority nursing diagnosis is
- a. Risk for altered body temperature related to stage 2 pressure ulcer
  - b. Impaired skin integrity related to immobility**
  - c. Feeding self care deficit related to blindness
  - d. Activity intolerance related to prolonged bed rest.

57. An appropriate nursing diagnosis for a client with large areas of skin excoriation resulting from scratching an allergic rash is
- a. Risk for impaired skin integrity
  - b. Impaired tissue integrity
  - c. Impaired skin integrity**
  - d. Risk for infection.
58. Which of the following terms should be used to document wound drainage that is thick, odorous, and green?
- a. Serous
  - b. Sanguineous
  - c. Serosanguineous
  - d. Purulent**
59. The theorist who viewed conservation principles as model for health is
- a. Joyce travelbee
  - b. Myra Levine**
  - c. Hildegard Peplau
  - d. Faye Abdelleh
60. Clinical nursing: A helping art was propounded by
- a. Ernestine Wiedenbach**
  - b. Ida Jean Orland
  - c. Imogene King
  - d. Magaret Newman.
61. A client has a pressure ulcer with a shallow, partial skin thickness, eroded area but no necrotic areas. The nurse would treat the area with which of the following dressing?
- a. Alginate
  - b. Dry gauze
  - c. Hydrocolloid**
  - d. No dressing is indicated.
62. Asking questions to determine if a person understands the health teaching provided by the nurse would be included during which step of the nursing process?
- a. Assessment
  - b. Evaluation**
  - c. Implementation
  - d. Planning and goals.
63. Which of the following items is considered the single most important factor in assisting the health professional in arriving at a diagnosis or determining the person's needs?
- a. Diagnostic test results
  - b. Biographical date

- c. **History of present illness**
  - d. Physical examination
64. When the method of wound healing is one in which wound edges are not surgically approximated and integumentary continuity is restored by granulations, the wound healing is termed
- a. **Secondary intention healing**
  - b. Primary intention healing
  - c. Third intention healing
  - d. First intention healing
65. The nurse is assessing a 48 year old client who has come to the physician's office for his annual physical examination. One of the first physical signs of aging is
- a. Accepting limitations while developing asset
  - b. Increasing loss of muscle tone
  - c. **Failing eyesight, especially close vision**
  - d. Having more frequent aches and pains.
66. Nurse Florence was assessing a patient at risk for hypothermia. When the skin becomes chilled over the entire body, some physiologic processes help to increase the body temperature. Which of these is not correct about these processes?
- a. Shivering increases heat production
  - b. **Sweating is enhanced to decrease heat loss**
  - c. Vasoconstriction occurs to decrease heat loss
  - d. None of the above.
67. The physician orders dextrose 5% in water, 1,000ml to be infused over 8 hours. The IV tubing delivers 15 drops/ml. Nurse John should run the IV infusion at a rate of
- a. 30 drops/minute
  - b. **32 drops/minute**
  - c. 20 drops/minute
  - d. 31 drops/minute
68. Nurse Ikere measures a client's temperature at 102°F; which is the equivalent centigrade temperature?
- a. 40.10C
  - b. **38.90C**
  - c. 40.90C
  - d. 38.10C
69. A female client was recently admitted. She has fever, weight loss, and was stooling. While assessing the client, Nurse Kingsley inspects the client's abdomen and notice that it is slightly concave. Additional assessment should proceed in which orders
- a. Palpation, auscultation and percussion

- b. Percussion, palpation and auscultation
  - c. Palpation percussion and auscultation
  - d. Auscultation, percussion and palpation**
70. Nurse Audu is assessing tactile fremitus in a client with pneumo-nia. For this examination, nurse Audu should use the
- a. Finger tips
  - b. Finger pads
  - c. Dorsal surface of the hand
  - d. Ulnar surface of the hand**
71. Nurse Osondu refers a female client with terminal cancer to a local hospice. The goal of this referral is to
- a. Help the client find appropriate treatment option
  - b. Support for the client and family in coping with terminal illness**
  - c. Ensure that the client get counseling regarding health care cost
  - d. Teach the client and family about cancer and its treatment.
72. Nurse Sandra was to carry out nursing interventions for client with fever. She provided a tepid sponge bath to the client to increase heat loss through
- a. Convection
  - b. Conservation
  - c. Radiation
  - d. Conduction**
73. A nursing diagnosis of ineffective peripheral tissue perfusion would be validated by
- a. Bounding radial pulse
  - b. Irregular apical pulse
  - c. Carotid pulse stronger on the left side than the right side
  - d. Absent posterior tibial and pedal pulse**
74. When the nurse entered the room to measure vital signs in preparing the client for a diagnostic test, the client is on the phone. What technique should the nurse use to determine the respiratory rate?
- a. Count the respirations during conversational pause
  - b. Ask the client to end the phone call now and resume it at a later time
  - c. Wait at the client's bed side until the phone call is completed and then count respirations
  - d. Since there is no evidence of distress or urgency, defer the measurement**
75. The client's temperature at 8.00am using an oral electronic thermometer is 36.1°C (97.2°F). If the respiration, pulse and blood pressure are within normal range, what would the nurse do next?
- a. Wait 15 minutes and retake it

- b. Check what the client's temperature was the last time
  - c. Retake it using a different thermometer
  - d. Chart the temperature, it is normal.
76. According to Piaget, a 5 year old is at what stage of development?
- a. Sensory motor stage
  - b. Concrete operations**
  - c. Pre-operational
  - d. Formal operation.
77. The essential nursing value which represents a concern for the well-being and well being of others is
- a. Human dignity
  - b. Autonomy
  - c. Integrity**
  - d. Altruism
78. Sensation of pain from a stimulus that normally does not produce pain is termed
- a. Dysesthesia
  - b. Hyperalgesia
  - c. Allodynia**
  - d. Wind up.
79. A client who describes his pain as 6 on a scale of 1 to 10 is classified as having which of the following?
- a. Mild pain
  - b. Mild to moderate pain
  - c. Moderate to severe pain**
  - d. Very severe pain.
80. During an admission nursing assessment, a client with diabetes describes his leg pain as a dull, burning sensation. The nurse recognizes this description to be characteristic of which type of pain?
- a. Physiological
  - b. Somatic
  - c. Visceral
  - d. Neuropathic**
81. Which statement best reflects the nurse's assessment of the fifth vital signs
- a. Do you have any complaint?
  - b. Are you experiencing any discomfort right now?**
  - c. Is there anything I can do for you now?
  - d. Do you have any complaints of pain?
82. The famous founder of modern nursing died?

- a. August 13,1918
  - b. February 13,1910
  - c. February 13,1918
  - d. August 13,1910**
83. Chief Uche CNO in charge of female medical ward was explaining to students on round the processes of urine formation. Chief Uche must mention the following except
- a. Filtration
  - b. Secretion
  - c. Micturition**
  - d. Reabsorption.
84. The glomerular filtration rate is best defined as
- a. The volume of filtrate formed by both kidneys each day
  - b. The volume of filtrate formed by one kidney each minute
  - c. The volume of filtrate formed by both kidneys each hour
  - d. The volume of filtrate formed by both kidneys each minute**
85. American Nurses' Association in 1980 sees health as a
- a. Steady state
  - b. Dynamic state**
  - c. Creative process
  - d. Optimum state
86. All are characteristics of acute disease except
- a. Sudden onset
  - b. May require intervention**
  - c. Have period of remission and period of exacerbation
  - d. Have duration.
87. Nurse Nwoye is providing care to a 50 year old woman with osteo-arthritis. Nurse Nwoye planning to reduce pain should know that localized pain and swelling seen in inflammation occurs as a result of
- a. Hyperemia
  - b. Exudates collection**
  - c. Dilatation of small blood vessels
  - d. Tissue replacement.
88. A woman who gave his only son for adoption will experience which of the following types of grieving
- a. Disenfranchised**
  - b. Abbreviated
  - c. Anticipatory
  - d. Dysfunctional

89. 89. Kubler Ross described five stages of grieving in the year
- 1964
  - 1993
  - 1988
  - 1969**
90. One of these is not included in Kubler's five stages of grieving
- Shock**
  - Anger
  - Bargaining
  - Depression
91. The best position for examination of the anterior aspect of the body is
- Sitting**
  - Recumbent
  - Prone position
  - Sims position.
92. One of the initial nursing activities for patient on admission is assessment. Nurse Kosi knows that nursing assessment includes the following except
- Collect data
  - Organize data
  - Analyze data**
  - Validate data.
93. Which of the following behaviours is most representative of the nursing diagnosis phase of the nursing process?
- Identifying major problems or needs**
  - Organizing data in the client's family history
  - Establishing short-term and long term goals
  - Administering an antibiotic.
94. Which of the following behaviours would indicate that the nurse was utilizing the assessment phase of the nursing process to provide nursing care?
- Proposessis
  - Generates desired outcomes
  - Reviews results of laboratory tests**
  - Documents care.
95. Which of the following elements is best categorized as secondary subjective data
- The nurse measures a weight loss of 10 pounds since the last clinic visit
  - Spouse states the client has lost all appetite**
  - The nurse palpates edema in lower extremities
  - Client states severe pain when walking up stair.

96. Pain have medical orders for analgesics, and the nurse is expected to administer the prescribed analgesics; which function of the nurse does this action provides,
- a. Independent function
  - b. Dependent function**
  - c. Collaborative function
  - d. Contributory function.
97. Individuals normally have defenses that protect the body from infection. Nonspecific defense include:
- a. Immunoglobulin
  - b. Helper T cells
  - c. Immune response
  - d. Inflammatory response**
98. For routine client care,the World Health Organization recommends hand washing under a stream of water for at least
- a. 30 seconds
  - b. 10 seconds
  - c. 20 seconds**
  - d. 60 seconds
99. The most effective nursing action for controlling the spread of infection includes which of the following?
- a. Thorough hand cleansing/washing**
  - b. Wearing gloves and masks when providing direct client care
  - c. Implementing appropriate isolation precautions
  - d. Administering broad spectrum prophylactic antibiotics
- 100.The client is a chronic carrier of infection.To prevent the spread of the infection to other client or health care providers, the nurse empha-sizes interventions that
- a. Eliminate the reservoir
  - b. Block the portal of exit from the reservoir**
  - c. Block the portal of entry into the host
  - d. Decrease the susceptibility of the host.
- 101.A patient asks a nurse, "My doctor recommended | increase my intake of folic acid. What type of foods contains the highest concentration of folic Acid?
- a. vegetables and liver**
  - b. Yellow vegetable and red meat
  - c. Carrots
  - d. Milk
- 102.In neurological assessment using the Glasgow coma scale, nurse scores a patient 4 for best motor response if He (the patient)

- a. Moves the limbs spontaneously
  - b. Localizes to pain
  - c. Has flexion withdrawal**
  - d. Decerebrate extension
103. During liver biopsy, the following are nurses' sole responsibility except
- a. To obtain the patient's consent after explaining the procedure to him**
  - b. To ascertain that patient's coagulation profile are available and in normal limit
  - c. Check baseline vital signs
  - d. Administer the premeditation as per physician's instruction.
104. Nurse Buzo 30 minutes after administering pentazocine to patient post operatively instructed the patient to tell him how comfortable he is. This could be included in which stage of the nursing process
- a. Assessment
  - b. Planning
  - c. Intervention
  - d. Evaluation**
105. Mrs. O.C. a 60 year Old woman admitted to the ward with history acute pain. The nurses' priority responsibility is to
- a. Assess for the location, intensity and duration of pain**
  - b. Administer any prescribed analgesic
  - c. Reassure patient and family members
  - d. Put patient in a position most comfortable to her.
106. In nursing process the end result of assessment is
- a. Planning
  - b. Collection of data
  - c. Diagnosis**
  - d. Documentation
107. The practice of nurses wearing uniforms was the initiative of
- a. Florence Nightingale
  - b. Linda Richards**
  - c. Clara Barton
  - d. Lavinia Dock
108. Critical thinking is essential to a nurse because it
- a. Is constantly used for solving problems and making sound judgments**
  - b. Becomes vital in developing nursing knowledge
  - c. Forms the basis for the professional code of ethics of nursing
  - d. Is needed to successfully pass the licensure examination.
109. Nurses use of non contact therapeutic touch is based on the concept developed by
