1. Which of the following is not a pelvic joint?
☒ A. Lumbosacral
B. Sacrococcygeal
C. Sacroiliac
D. Symphysis pubis
2. Which of the under-listed structures do not form part of the Fallopian tube:
a. Ampulla
☒ b. Cornua
c. Interstitial
d. Isthmus
3. The fertilization takes place in which of the following structure
☒ A. Ampulla
B. Cornua
C. Interstitial
D. Isthmus
4. Which of the following is NOT part of the innominate bone of pelvis
☒ A. Coccyx
B. Ilium
C. Ischium
D. Pubis
5. During pregnancy the decidual of the uterus contain the following structures.
I. Basal layer
II. Capsular layer
III. Functional layer
IV. Spongy layer
☒ A. i, ii, iii
B. ii iii iv
C. I, iii, iv
D. i, ii, iv
6. The following blood vessels supply the vagina with blood **EXCEPT**?
A. Inferior vesical
☒ B. Internal superficial
C. Pudendal
D. Uterine

7. The function of the prostate gland is to.....
- A. Assist spermatozoa to mature
 - ☒ B. Produce lubricant for the urethra
 - C. Produce spermatozoa
 - D. Secrete testosterone
8. From which of the following structure does the fetus develop?
- A. Amniotic sac
 - ☒ B. Inner cell mass
 - C. Trophoblast
 - D. Yolk sac
9. Which of the following hormone is responsible for milk production?
- A. Oestrogen
 - B. Oxytocin
 - C. Progesterone
 - ☒ D. Prolactin
10. The statement below depicts the characteristics of the puerperium: **EXCEPT?**
- A. Breastfeeding period
 - ☒ B. Febrile stage
 - C. Recuperative stage
 - D. Strengthens mother- child relationship
11. The increased activity of the endometrial glands during luteal phase of the female reproductive cycle is stimulated by:
- ☒ A. Progesterone
 - B. Estrogen
 - C. Prolactin
 - D. Oxytocin
12. A 17 years old is bleeding between periods of less than two weeks. This condition is an abnormality in the menstrual cycle known as:
- ☒ A. Metrorrhagia
 - B. Menorrhagia
 - C. Amenorrhea
 - D. Dysmenorrhea
13. Which the following is **NOT** of the superficial muscles of the pelvic floor?
- A. Bulbocavernosus
 - B. External anal sphincter
 - ☒ C. Internal anal sphincter
 - D. Ischioanal fossa

14. Which of the underlisted contract when Oxytocin is been released into the blood stream?
- A. Acini cell
 - B. Areola
 - C. Montgomery's tubercles
 - ☒ D. Myoepithelial
15. Intramuscular vitamin K is given to babies at birth because of
- A. High level of fetal
 - B. High level of hemoglobin
 - ☒ C. Low level of prothrombin
 - D. Low level of platelets
16. Which of the following complications occurs as prolonged administration of oxygen of babies in the intensive care unit?
- A. Chronic lung disease
 - B. Renal failure
 - ☒ C. Retrolental fibroplasias
 - D. Retrolental fibrocystic
17. Which of the following is true of the sagittal suture?
- A. Divides the frontal bones
 - ☒ B. Divides the parietal bones
 - C. Separate the occiput from the parietal
 - D. Separate the parietal from the frontal bones

USE THE CASE STUDY BELOW TO ANSWER QUESTION 19 TO 21

Madam Ackon 30 years reported to the antenatal clinic with a history of 18 weeks amenorrhea. She had one abortion, delivered one baby at term which was alive. Her last pregnancy ended in stillbirth at 36 weeks. Her LMP was on the 18th April, 2018.

18. Madam Ackon is.....
- A. Gravida 3 para 1 + 1
 - B. Gravida 3 para 2+1
 - ☒ C. Gravida 4 para 2+1
 - D. Gravida 4 para 1+2

19. What is madam Ackon's expected date of delivery?
- A. 25/ 1/ 2018
 - B. 25/ 2/ 2018
 - ☒ C. 25/ 1/2019
 - D. 25/ 2/ 2019
20. On examination the fundus will be
- A. Above the symphysis pubis
 - B. At the level of the umbilicus
 - ☒ C. Midway between the symphysis pubis and the umbilicus
 - D. Midway between the umbilicus and xiphisternum
21. What would be considered the most important factor in determining the progress of labour?
- ☒ A. Cervical dilatation
 - B. Descent of head
 - C. Maternal condition
 - D. Uterine contraction
22. The first stage of true labour starts with
- A. Appearance of "show"
 - B. Backache and pain in the loins
 - C. Effacement of the cervix
 - ☒ D. Regular rhythmic uterine contraction
23. Which of these injuries may occur as a result of difficult labour?
- ☒ A. Erb's palsy
 - B. Facial palsy
 - C. Fracture of femur
 - D. Torticollis
24. Which of the following is the normal range of fetal heart rate?
- ☒ A. 110-160
 - B. 120-160
 - C. 130-150
 - D. 140-160
25. How many hours does the spermatozoa remain viable in the fallopian tube before fertilization
- A. 12 - 24 hours
 - B. 24 - 30 hours
 - ☒ C. 36- 72 hours
 - D. 72- 96 hours

26. How many hours does the ovum remain viable in the fallopian tube before fertilization?
- ☒ A. 12-24 hours
 - B. 24-36 hours
 - C. 36-72 hour
 - D. 72-96 days
27. Which of the following hormones influence the formation of spermatozoa?
- A. Testosterone
 - B. Hyaluronidase
 - C. Luteinizing Hormone
 - ☒ D. Follicle stimulating hormone
28. Which enzyme allows the spermatozoa to penetrate the zona pellucid to fertilize the ovum?
- A. Acrosome
 - B. Semen
 - ☒ C. Hyaluronidase
 - D. Testosterone
29. Which part of the external genitalia is highly vascularised during pregnancy?
- A. Prepuce
 - ☒ B. Labia minora
 - C. Labia majora
 - D. Vagina
30. The following structures are found on the female external genitalia: **EXCEPT?**
- A. Skene's duct
 - B. Bartholin's gland
 - C. Urethra orifice
 - ☒ D. Frenulum
31. Which part of the vestibule does the opening of the Skene's duct located?
- A. Prepuce
 - B. Frenulum
 - C. Clitoris
 - ☒ D. Urethral orifice
32. Which part of the vestibule does the Bartholin's gland located?
- A. Fourchette
 - B. Triangular ligament
 - C. Urethral orifice
 - ☒ D. Vagina orifice
