

METHODIST UNIVERSITY GHANA

DEPARTMENT OF NURSING AND MIDWIFERY

BSC. NURSING: END OF FIRST SEMESTER EXAMINATION: 2024/2025

**COURSE CODE/TITLE: MNUR 103 FUNDAMENTALS OF NURSING II
(3CREDITS)**

INSTRUCTIONS:

ANSWER ALL QUESTIONS ON THE QUESTION PAPER

TIME ALLOWED: 1HOUR :30 MINUTES

EXAMINER: STELLA SAGEO

Page 1 of 11

ANSWER ALL QUESTIONS BY CIRCLING THE MOST APPROPRIATE ANSWER FROM (A-D). ONE MARK IS ASSIGNED TO EACH QUESTION

1. The purpose of appropriate dressing of wounds includes the following except:
 - A. To protect the wound from mechanical injury
 - B. Protect the wound from microbial invasion
 - C. To provide or maintain nutrition
 - D. To provide thermal insulation

2. Which of the following is a primary risk factor for pressure ulcer formation?
 - A. Insomnia
 - B. Sleeping on water bed
 - C. Impaired mobility
 - D. Adequate nutrition

3. The nurse plans to remove a client's sutures. Which of the following actions demonstrate appropriate standards of care?
 - A. Use clean technique
 - B. Grasp the suture at the knot with a pair of scissors
 - C. Clean wound using each one swab only
 - D. Use clean swabs

4. Friction and tear are mechanical forces that contribute to the development of pressure ulcers. Which of the following is an example of shear injury?
 - A. Lying on a firm bed that does not distribute the weight
 - B. Resting in a semi-sitting position that allows gradual downward movement
 - C. Rubbing or irritating the skin so that epithelial cells are removed
 - D. Compression of blood vessels that leads to ischemia

5. When caring for a client who is at risk of developing pressure ulcers the nurse should avoid which one of the following?
 - A. Cleansing the skin with a Ph-balanced soap
 - B. Lubricate the skin with a moisturizing cream
 - C. Massaging reddened areas of the skin
 - D. Using absorbent materials for incontinence

6. Serous drainage from a wound is defined as.....
 - A. fresh bleeding
 - B. clear, watery plasma
 - C. brown and foul smelling
 - D. thick and yellow

7. Which of the following best defines incontinence???

 - A. Voluntary loss of urine and faeces
 - B. Involuntary control of the bowel and bladder function
 - C. Stress incontinence related to bladder and bowel function
 - D. Bivoluntary loss of control over bowel movement

8. Which of the following measures is not aimed at reducing the risk of pressure sores?

 - A. Ensuring a dry and comfortable bed
 - B. Turning patients every 2 hours
 - C. Frequent feeding of patients
 - D. Treatment of pressure areas

9. The following are causes of continence except

 - A. weakened pelvic floor muscles
 - B. Hormonal changes
 - C. Aging
 - D. Sleep parttens

10. The following are personal protective clothing for wound dressing except:

 - A. Epidermal pathes
 - B. Disposable gloves
 - C. Surgical gloves
 - D. Face massk

11. Which of the following is the correct sequential order of the phases of healing?

 - A. Remodeling, inflammation, hemostasis, and repair
 - B. Inflammation, hemostasis, proliferation, and maturation
 - C. Hemostasis, inflammation, repair, and remodeling
 - D. Inflammation, maturation, proliferation, and hemostasis

12. Which of the following factors contributes to wound healing?

 - A. Patient's height
 - B. Blood Circulation
 - C. Fluid status
 - D. Patient's weight

13. What plays a key role in the inflammatory phase of wound healing?

 - A. Platelet
 - B. Lymphocytes
 - C. Macrophages
 - D. Collagen

14. All these factors affect wound healing except:
 - A. Hypoproteinemia
 - B. Hyperglycemia
 - C. Anemia
 - D. Hypovolemia
15. Which of the following phase of the nursing process does the nurse utilize interviewing and observation skills?
 - A. Diagnosis
 - B. Palnning
 - C. Assessment
 - D. Intervention
16. The first phase of wound healing is where what (mainly) occurs?
 - A. Granulation tissue formation
 - B. Scar tissue formation
 - C. Angiogenesis
 - D. Inflammation
17. Which of the following cells are involved with the coagulation phase of tissue repair?
 - A. White blood cells
 - B. Red blood cells
 - C. Platelets
 - D. Fribrnogen
18. The following procedures can be classified under surgical asepsis **except**.....
 - A. Sterilization
 - B. Hand washing
 - C. Autoclaving
 - D. Surgical hansd scrubbing
19. The following are importance of asepsis **except**
 - A. Reduces infection risks in medical procedures.
 - B. Protects patients, healthcare workers, and the public
 - C. Prevents mistakes on the ward
 - D. Prevent surgical site infections

EXAMINER: STELLA SAGEO

20. In caring for an unconscious patient, the nurse places higher priority on which of the following....
- A. pads the bed side rails for comfort
 - B. frequently suction the patient to stimulate coughing
 - C. assesses motor and sensory status
 - D. Places the patient on the side with the head of the bed elevated.
21. Which of the following is a nursing responsibility towards a patient before wound dressing?
- A. Preparation of the environment
 - B. Personal hygiene
 - C. Turning of the patient in bed
 - D. Setting of the vital signs tray
22. The systematic problem-solving approach towards providing individualized nursing care is known as _
- A. Nursing care plan
 - B. Nursing process
 - C. Nursing care
 - D. Nursing practice act
23. Medical Asepsis : An as clean technique, it involves practices that
- A. reduce the number and spread of pathogens
 - B. Increases the number and spread of pathogens
 - C. Creates the environment which is not conducive for the pathogens
 - D. Prevent the spread of pathogens
24. The following are characteristics of the nursing process **except**
- A. Systematic and orderly
 - B. Client centered
 - C. Interventions based
 - D. All of the above

25. What is required before the nurse perform hand hygiene? Select all that apply

- i. Fingernails should be short.
- ii. Remove bracelets.
- iii. Rings should not have jewels or stones.
- iv. Assess hands for visible soil

A. i,ii,iii

B. i,iii,iv

C. i,ii,iv

D. ii,iii,iv

26. Hand washing and the use of gloves are practices that can be classified under medical asepsis...

A. TRUE

B. FALSE

27. Medical asepsis known as sterile technique, it eliminates all microorganisms and their spores from an area

A. TRUE

B. FALSE

28. A client has an infection that is spread through droplets spread. Which of the following is essential for the nurse to use when taking this client's temperature?

A. A gown

B. A mask

C. Gloves

D. Goggles

29. The following procedures requires sterile technique **EXCEPT:**

A. Bathing the patient

B. Checking of vital signs

C. Surgical operation

D. Laying the patient bed
