

- c. Thirst and confusion
- d. Orthostatic hypotension and Weak pulse
- 55. A patient with diabetes insipidus is most likely to experience what type of fluid volume deficit (dehydration)?
 - a. a.Hypertonic dehydration
 - b. b.Hypotonic dehydration
 - c. c.Isotonic dehydration
- 56. A female client comes into the emergency room complaining of SOB and pain in the lung area. She states that she started taking birth control pills 3 weeks ago and that she smokes. Her VS are: 140/80, P 110, R 40. The physician orders ABG's, results are as follows: pH: 7.50; PaCO₂ 29 mm Hg; PaO₂ 60 mm Hg; HCO₃- 24 mEq/L; SaO₂ 86%. Considering these results, the first intervention is to:
 - a. Begin mechanical ventilation
 - b. Place the client on oxygen.
 - c. Give the client sodium bicarbonate.
 - d. Monitor for pulmonary embolism
- 57. There is a considerable decline in the weight of the body and growth rate along with the mental faculties getting impaired. Which of these diseases are associated with the mentioned symptoms?
 - a. Epilepsy
 - b. Indigestion
 - c. Kwashiorkor
 - d. Marasmus
- 58. Marasmus is not characterized by
 - a. Swelling of limbs
 - b. Replacing tissue proteins
 - c. Impaired growth
 - d. Protein deficiency
- 59. Which disorder are kids of age below one year more likely to suffer from if breastfeeding is replaced by foods low in calories and proteins?
 - a. Rickets
 - b. Kwashiorkor
 - c. Marasmus
 - d. Pellagra
- 60. A male adult patient hospitalized for treatment of a pulmonary embolism develops respiratory alkalosis. Which clinical findings commonly accompany respiratory alkalosis?
 - a. Lightheadedness or paresthesia
 - b. Nausea or vomiting
 - c. Abdominal pain or diarrhea
 - d. Hallucinations or tinnitus
- 61. Which mineral deficiency is associated with the development of goitre?
 - a. Iron
 - b. Iodine
 - c. Zinc
 - d. Selenium
- 62. Miriam a college student with acute rhinitis sees the campus nurse because of excessive nasal drainage. The nurse asks the patient about the colour of the drainage. In acute rhinitis nasal drainage normally is:
 - a. Yellow

- b. Green
 - c. Clear
 - d. Gray
63. If a client continues to hypoventilate, the nurse will continually assess for a complication of:
- a. Respiratory acidosis
 - b. Metabolic acidosis
 - c. Respiratory alkalosis
 - d. Metabolic alkalosis
64. How does nasal catarrh differ from a common cold?
- a. Nasal catarrh is caused by a virus, while a cold is caused by bacteria.
 - b. Nasal catarrh is a chronic condition, while a cold is acute.
 - c. Nasal catarrh only affects children, while a cold affects people of all ages.
 - d. Nasal catarrh is not contagious, while a cold is contagious.
65. What are common symptoms of influenza?
- a. Sneezing and coughing
 - b. Rash and fever
 - c. Diarrhea and vomiting
 - d. Joint pain and headache
66. As the nurse you know that one of the reasons for an increase in multi-drug-resistant tuberculosis is:
- a. Incorrect medication ordered
 - b. Increase in tuberculosis cases nationwide
 - c. Incorrect route of drug ordered
 - d. Noncompliance due to duration of medication treatment needed
67. A patient in the Emergency Room is diagnosed with bacterial meningitis due to *Neisseria meningitidis*. The patient was not properly isolated, and several employees entered her room without wearing a mask. Which employees should receive post-exposure prophylaxis?
- a. The phlebotomist who drew blood on the patient
 - b. The respiratory therapist who intubated the patient
 - c. The radiology technician that performed the chest radiograph
 - d. The employee from admissions that registered the patient
68. What bacterium causes diphtheria?
- a. *Streptococcus pneumonia*
 - b. *Corynebacterium diphtheria*
 - c. *Haemophilus influenzae*
 - d. *Neisseria meningitidis*
69. Which of the following is a common symptom of mumps?
- a. Rash
 - b. Sore throat
 - c. Swollen salivary glands
 - d. Earache
70. As the nurse in a primary care clinic, which cultural concern would you integrate into your psychological assessments of your clients?
- a. The concern related to the client's cultural reluctance to report psychological symptoms because of some possible culturally based stigma associated with psychiatric mental health disorders
 - b. Concerns revolving around the lack of financial and health insurance resources to pay for psychological care lack of social support systems

- c. The concern related to the culturally based client apathy about nursing care and nursing assessments
 - d. Concerns related to the compliance with psychological treatment regimens because of the client's
71. The nurse provides home care instructions to the mother of a child with chickenpox about preventing the transmission of the virus. Which instruction should the nurse include?
- a. Isolate the child until the skin vesicles have dried and crusted
 - b. Ensure that the child uses a separate bathroom for elimination
 - c. Brings all household members to the clinic immediately for a varicella vaccine
 - d. Ask the health care provider for a prescription for antibiotics for all household members
72. An emergency department nurse is a member of a Disaster Preparedness planning group. The group is developing a specific emergency response plan in the event that a client with small pox arrives in the emergency unit. Which intervention should not be included in the plan?
- a. Isolate the client
 - b. Don protective equipment immediately
 - c. Administer smallpox vaccines to all hospital staff, client contacts and clients sitting in the emergency department waiting room immediately.
 - d. Identify all client contacts, including transport services to the emergency department and clients in the waiting room
73. A child is seen in the health care clinic, and testing for human immunodeficiency virus (HIV) performed because of the child's exposure to HIV infection. Which home care instruction should the nurse provide to the parents of the child?
- a. Avoid sharing toothbrushes
 - b. Avoid all immunizations until the diagnosis is established
 - c. Wipe up any blood spills with a rag, and allow them to air dry
 - d. Wash your hands with half-strength bleach if they come in contact with the child blood
74. Causative agent of yellow fever
- a. Group A alphavirus
 - b. Enterovirus
 - c. Flavivirus
 - d. Adenovirus
75. Which of the following vector transmit yellow fever.
- a. *Mansonia* mosquito
 - b. *Aedes* mosquito
 - c. Hard tick
 - d. Trombiculid mite
76. Which of the drug of choice for the initial treatment for tuberculosis
- a. Rifampicin
 - b. Isoniazid
 - c. Ethambutol
 - d. The combination of isoniazid and ethambutol along with other drugs
77. During her first prenatal visit, a woman asks why she is being screened for syphilis. Which of the following is the best response by the healthcare provider?
- a. If you have the infection, the safest time to treat you is during the first Trimester

- b. Syphilis can be transferred from you to your baby through the placenta
 - c. We must report all cases of syphilis to the health department
 - d. If you test positive you may need to be admitted to the hospital for care
78. HIV post prophylaxis should be started within?
- a. 48 hours
 - b. 6 hours
 - c. 24 hours
 - d. 72 hours
79. What is the primary cause of dengue fever?
- a. Bacterial
 - b. Virus
 - c. Fungai
 - d. None of the above
80. Which of the following is a disease caused by a virus?
- a. Chorea
 - b. Tuberculosis
 - c. Leprosy
 - d. Chickenpox
81. Which disease is transmitted from infected mammals to man?
- a. Rabies
 - b. Malaria
 - c. Chickenpox
 - d. AIDS
82. Which of the following is a contagious disease?
- a. Diabetes
 - b. Heart attack
 - c. Hypertension
 - d. Diphtheria
83. Incubation period of typhoid fever?
- a. 21-25 days
 - b. Less than 3 days
 - c. 3-5 days
 - d. 10-14 days
84. A hospitalized client with active pulmonary tuberculosis has been receiving multidrug therapy for the past month and is being prepared for discharge. Which indicates that respiratory isolation is no longer required and that medication therapy has been effective?
- a. stools are clay coloured
 - b. the mantoux test is negative
 - c. sputum cultures are negative
 - d. nausea and vomiting have stopped
85. the parent of a child with mumps express concern that their child will develop orchitis as a result of having mumps and ask the nurse about the signs of this complication. What should the nurse tell the parents is a sign of this complication?
- a. Fever
 - b. Facial swelling
 - c. Swollen glands
 - d. Difficulty urinating
86. Which bacterium is responsible for causing Buruli ulcer?
- a. Mycobacterium tuberculosis

- b. *Mycobacterium leprae*
 - c. *Mycobacterium ulcerans*
 - d. *Mycobacterium avium*
87. How is Buruli ulcer primarily transmitted?
- a. Through contaminated food and water
 - b. Through mosquito bites
 - c. Through respiratory droplets
 - d. Through direct contact with infected wounds or soil
88. What is a common symptom of Buruli ulcer?
- a. Severe headache
 - b. Joint pain
 - c. Skin lesion with undermined edges
 - d. Persistent cough
89. Which part of the body is most commonly affected by Buruli ulcer?
- a. Arms
 - b. Legs
 - c. Face
 - d. Abdomen
90. What is the most effective method for diagnosing Buruli ulcer?
- a. Blood test
 - b. Urine test
 - c. Skin biopsy
 - d. X-ray
91. Which of the following is a complication associated with untreated Buruli ulcer?
- a. Blindness
 - b. Amputation
 - c. Heart attack
 - d. Kidney failure
92. What is the most effective method for preventing Buruli ulcer?
- a. Vaccination
 - b. Avoiding swimming in ponds or stagnant water
 - c. Eating a balanced diet
 - d. Using insect repellent
93. Which is the priority action by the nurse in the provision of care for a client admitted with a suspected diagnosis of acute meningitis?
- a. Assure the client's room is dimly lit.
 - b. Have the client sign consent for a lumbar puncture.
 - c. Place two 18-gauge intravenous (IV) catheters.
 - d. Prepare a client room for droplet isolation precautions.
94. What is the most effective method for diagnosing leprosy?
- a. Blood test
 - b. Urine test
 - c. Skin biopsy
 - d. X-ray
95. What is the primary treatment for leprosy?
- a. Antibiotics
 - b. Antifungal medication
 - c. Corticosteroids
 - d. Antiviral medication
96. Which bacterium is responsible for causing paratyphoid fever?

- a. *Salmonella typhi*
 - b. *Salmonella paratyphi A*
 - c. *Salmonella enterica*
 - d. *Escherichia coli*
97. What is a common complication of untreated typhoid fever?
- a. Blindness
 - b. Dehydration
 - c. Tooth decay
 - d. Joint pain
98. Which of the following is a common symptom of rabies?
- a. Itchy rash
 - b. Muscle weakness
 - c. Runny nose
 - d. Swollen lymph nodes
99. What is the most effective method for diagnosing rabies?
- a. Blood test
 - b. Urine test
 - c. Skin biopsy
 - d. Direct fluorescent antibody (DFA) test on saliva or brain tissue
100. If you have been bitten or scratched by a wild animal, what should you do?
- a. Clean the wound with soap and water to remove any saliva
 - b. Call your health care provider as soon as possible
 - c. Call your state or local health department as soon as possible
 - d. All of the above
101. Which of these is an early symptom of rabies?
- a. Restlessness
 - b. Itching and numbness around the site of the bite
 - c. Nausea
 - d. All of the above
102. Which bacterium is responsible for causing anthrax?
- a. *Bacillus anthracis*
 - b. *Clostridium botulinum*
 - c. *Escherichia coli*
 - d. *Streptococcus pneumoniae*
103. Which of the following is a common symptom of schistosomiasis?
- a. Skin rash
 - b. Severe headache
 - c. Bloody urine or stool
 - d. Joint pain
104. What is the treatment of choice for dracunculiasis (Guinea worm disease)?
- a. Enteric antibiotics
 - b. Radiation therapy
 - c. Removal of the worm from the lesion
 - d. Treatment with one dose of praziquantel
105. Which of the following is a common symptom of ankylostomiasis?
- a. Bloody diarrhea
 - b. Skin rash
 - c. Persistent cough
 - d. Iron-deficiency anemia
106. Which of the following parasites is responsible for flagellate infestation?

- a. *Giardia lamblia*
 - b. *Plasmodium falciparum*
 - c. *Trypanosoma cruzi*
 - d. *Taenia solium*
107. How is actinomycosis primarily transmitted to humans?
- a. Through contaminated food and water
 - b. Through mosquito bites
 - c. Through respiratory droplets
 - d. Through direct contact with soil or feces
108. What causes histoplasmosis?
- a. Bacteria
 - b. Virus
 - c. Fungi
 - d. Parasitic protozoa
109. Which of the following is a common symptom of ringworm?
- a. Diarrhea
 - b. Skin rash with circular patches
 - c. Persistent cough
 - d. Muscle weakness
110. Which of the following is a common symptom of gonorrhea?
- a. Skin rash
 - b. Painful urination and discharge
 - c. Joint pain
 - d. D) Persistent cough
111. Which bacterium is responsible for causing lymphogranuloma venereum (LGV)?
- a. *Chlamydia trachomatis* serovars L1, L2, L3
 - b. *Neisseria gonorrhoeae*
 - c. *Treponema pallidum*
 - d. *Haemophilus ducrey*
112. Which virus is responsible for causing genital warts?
- a. Human papillomavirus (HPV)
 - b. Herpes simplex virus (HSV)
 - c. Varicella-zoster virus (VZV)
 - d. Hepatitis B virus (HBV)
113. You have completed diet teaching with a patient who has hypernatremia. Which statement by the patient causes concern?
- a. I will buy fresh vegetables and fruits
 - b. I will avoid eating canned foods
 - c. I'm glad I can still eat sandwiches with bologna
 - d. I will avoid cooking with butter
114. A comprehensive health assessment includes:
- a. A complete medical history, a general survey and a complete physical assessment.
 - b. complete medical history, a general survey and a focused physical assessment.
 - c. A client interview, a significant other interview, a general survey and a complete physical assessment.
 - d. A client interview, a significant other interview, a general survey and a focused physical assessment.
115. Which of the following is not a symptom of hyperkalemia?

- a. Positive Chvostek's sign
 - b. Decreased blood pressure
 - c. Muscle twitches/cramps
 - d. Weak and slow heart rate
116. All peaked T-waves, flat P-waves, prolonged PR intervals and widened QRS complexes can present in which of the following conditions?
- a. Hypocalcemia
 - b. Hypercalcemia
 - c. Hypokalemia
 - d. Hyperkalemia
117. A patient's potassium level is 3.0. Which foods would you encourage the patient to consume?
- a. Cheese, collard greens, and fish
 - b. Avocados, strawberries, and potatoes
 - c. Tofu, oatmeal, and peas
 - d. Peanuts, bread, and corn
118. When documenting assessment findings, which of the following are examples of objective data?
- a. Chest pain and headache
 - b. leg pain and calf tenderness
 - c. redness and swelling of feet
 - d. dizziness and headache
119. While assessing a patient's lower extremities, the nurse notes edema around the feet and ankles. When the area is depressed, it lasts for more than 1 minute before the shape returns. The nurse would document this edema as pitting edema.
- a. 4+
 - b. 3+
 - c. 2+
 - d. 1+
120. During the review of systems, the nurse questions the 88-year-old patient about her gastrointestinal system. The nurse will ask about what symptom?
- a. Pyrosis
 - b. wheezing
 - c. Polyuria
 - d. Dyspnea
