DEPARTMENT OF NURSING & MIDWIFERY

END OF SECOND SEMESTER EXAMINATIONS, 2023/2024 ACADEMIC YEAR
BSc GENERAL NURSING, LEVEL 200

MNUR 209: SURGICAL NURSING I

(Examiner: Mr. Narcotey Stephen)

04.00 Saturday, May 3, 2024

TIME ALLOWED: 2 HOURS

INSTRUCTIONS: ANSWER ALL QUESTIONS. ANSWER SECTION A ON THE QUESTION PAPER AND SECTION B IN THE ANSWER BOOKLET PROVIDED.

SECTION A [40 Marks]

Read the questions carefully and select the best choice for each question. Write the letter corresponding to your choice in the space provided.

1. The risk factors of cancer can be associated with all the following **except**:
- A. dietary and genetic factors.
 - B. hormonal and chemical agents.
 - C. parity
 - D. viruses.

Ans.....

2. A major disadvantage of chemotherapy is that it:
- A. attacks cancer cells during their vulnerable phase.
 - B. functions against disseminated disease.
 - C. is systemic.
 - D. targets normal body cells as well as cancer cells.

Ans.....

3. A woman is diagnosed of uterine cancer and is scheduled for radiotherapy. Which of the following techniques is most appropriate for this patient?
- A. Chemosurgery
 - B. Electrotherapy
 - C. External radiation
 - D. Internal radiation

Ans.....

4. A nurse is administering IV Chemotherapeutic agent and realized that there is extravasation. Her intervention should include all the following **except**:
- A. apply warm compress over the infiltration area.
 - B. immediately discontinues the infusion.
 - C. injecting an antidote, if required.

D. place ice over the site of infiltration.

Ans.....

5. The **most** common cause of bleeding in cancer patients is:

- A. anaemia.
- B. coagulation disorders.
- C. hypoxemia.
- D. thrombocytopenia.

Ans.....

6. What factor differentiates a malignant tumour from a benign tumour?

- A. It causes death.
- B. It grows at a faster rate.
- C. It invades and metastasizes.
- D. It is often encapsulated.

Ans.....

7. A patient was told she has carcinoma in situ, and the patient wonders what that is. How would you explain this to the patient?

- A. Capable of causing cellular alterations associated with cancer
- B. Evasion of the immune system by cancer cells
- C. Lesion with histologic features of cancer except invasion
- D. Tumour cell surface antigens that stimulate an immune response

Ans.....

8. Which of the following is a characteristic of benign tumours?

- A. Fully differentiated tissue.
- B. Immature, poorly differentiated tissue
- C. Invasive growth
- D. Presence of metastasis

Ans.....

9. Human papilloma virus is known to be associate with:

- A. cervical cancer
- B. gastric cancer
- C. hepatocellular cancer
- D. lymphoma

Ans.....

10. In staging and grading neoplasm TNM system is used. What does the TNM stands for?

- A. Time, lymph node involvement, metastasis
- B. Time, neoplasm, mode of growth
- C. Tumour size, lymph node involvement, metastasis
- D. Tumour size, lymph node involvement, mode of growth

Ans.....

11. Neoplasm can be classified as either benign or malignant. The following are characteristics of malignant tumour apart from?

- A. Encapsulated
- B. Infiltrates surrounding tissues
- C. Metastasis
- D. Poorly differentiated cells

Ans.....

12. The following are disadvantages of 2% Glutaraldehyde in sterilization **except**

- A. It takes longer time to kill microorganisms
- B. Coagulates blood and fix tissues to surfaces
- C. Cannot be used for towels and gauze
- D. Leaves residue that can be harmful

Ans.....

13. Spinal Anaesthesia is an example of which anaesthetic technique?

- A. Local anaesthesia
- B. General anaesthesia
- C. Regional anaesthesia
- D. Topical anaesthesia

Ans.,,,,,,,,,,

14. In the recovery room, the postoperative client suddenly becomes cyanotic. What is the **most** appropriate nursing action?

- A. Start administration of oxygen
- B. Call for assistance
- C. Reposition the head and determine patency of airway
- D. Insert an oral airway and suction the nasopharynx

Ans.....

15. To prevent complications of immobility, which activities would the nurse plan for the first postoperative day after a colon resection?

- A. Turn, cough, and deep breathe every 30 minutes around the clock
- B. Get the client out of bed and ambulate to a bedside chair
- C. Provide passive range of motion three times a day
- D. It is not necessary to worry about complications of immobility on the first postoperative day

Ans.....

16. A client is scheduled for surgery in the morning. Preoperative orders have been written. What is the **most** important thing to do before surgery?

- A. Remove all jewellery or tape wedding ring
- B. Verify that all laboratory work is complete
- C. Inform family or next of kin
- D. Have all consent forms signed

Ans.....

17. As the nurse caring for a first day postoperative surgical client. Arrange in sequence the dietary progression from 1 to 4:

- 1. Full liquid;
- 2. NPO;
- 3. Clear liquid;
- 4. Soft diet

- A. 1, 2, 3, 4
- B. 2, 3, 1, 4
- C. 2, 1, 4, 3
- D. 4, 3, 2, 1

Ans.....

18. Which of the following is the primary purpose of maintaining NPO for 6 to 8 hours before surgery?

- A. To prevent malnutrition
- B. To prevent electrolyte imbalance
- C. To prevent aspiration pneumonia
- D. To prevent intestinal obstruction

Ans.....

19. The nurse will provide preoperative teaching on deep breathing, coughing and turning exercises. When is the **best** time to provide these teachings?

- A. Before administration of preoperative medications
- B. The afternoon or evening prior to the day of surgery
- C. Several days prior to the day of surgery
- D. Upon admission of the client in the recovery room

Ans.....

20. The following factors ensure validity of informed written consent **except**:

- A. The patient is of legal age with proper mental disposition
- B. If the patient is a child, secure consent from the parents or legal guardian
- C. The consent is secured before administration of preoperative medications
- D. If the patient is unable to write, the nurse signs the consent for the patient

Ans.....

21. Which of the following is experienced by the patient who is under general anaesthesia?

- A. The patient is unconscious
- B. The patient is awake
- C. The patient experiences slight pain
- D. Loss of sensation in the lower half of the body

Ans.....

22. Surgery done to remove lesions that are likely to develop into cancer is known as:

- A. Diagnostic.
- B. Palliative.
- C. Prophylactic.
- D. Reconstructive.

Ans.....

23. An example of palliative surgery is a:

- A. Gastrostomy for oesophageal cancer.
- B. Mastectomy for breast cancer.
- C. Nephrectomy for kidney cancer
- D. Partial hepatectomy for liver cancer

Ans.....

24. What is the name of the process by which malignant cells move from one site of the body to another?

- A. Eroding
- B. Infiltration
- C. Metastasis
- D. Transportation

Ans.....

25. The primary goal in withholding food before surgery is to prevent:

- A. aspiration.
- B. distention.
- C. infection.
- D. Obstruction

Ans.....

26. Hidden fears in preoperative patient may be indicated when the patient:

- A. avoids communication.
- B. repeatedly asks questions that have previously been answered.
- C. talks incessantly.
- D. does all the above.

Ans.....

27. What should be done with parts of the body that have been torn away?

- A. Clean and trim around the rough edges
- B. Incinerate it
- C. Rinse, wrap in dry sterile gauze
- D. Rinse, wrap in moist sterile gauze

Ans.....

28. What is a contusion?

- A. Is an injury to a ligament and is often caused by a wrench or twist
- B. Is an injury to a muscle or tendon, and is often caused by overuse, force, or stretching.
- C. Is an injury to the soft tissue often produced by a blunt force such as a kick, or blow.
- D. None of the above

Ans.....

29. An open wound is one in which the skin surface has **not** been broken.

- A. True
- B. False

Ans.....

30. What is another name for a bruise?

- A. Contusion
- B. Erythema
- C. Laceration
- D. Oedema

Ans.....

31. The nurse is preparing Mrs. Hou for surgery for treatment of a ruptured spleen as the result of an automobile crash. This type of surgery belongs in which of the following categories?

- A. Minor, diagnostic
- B. Minor, elective
- C. Major, emergency
- D. Major, palliative

Ans.....

32. A group of students are reviewing the purposes of general anaesthesia in preparation for a test. The students demonstrate a need for additional study when they identify which of the following as a purpose of general anaesthesia?

- A. Localized loss of sensation
- B. Loss of consciousness
- C. Reduction of reflex action
- D. Relaxation of skeletal muscles

Ans.....

33. Which of the following patient problems would predispose him to compromise respiratory function during or after surgery?

- A. Decreased peripheral pulses
- B. Dehydration
- C. Enlarged scrotum
- D. Obesity

Ans.....

34. A nurse is caring for an obese patient who has surgery. The nurse monitors this patient for which of the following postoperative complications?

- A. Gas pains
- B. Haemorrhage
- C. Hunger
- D. Impaired wound healing

Ans.....

35. Mr. Sitsope has had a surgical procedure that necessitated a thoracic incision. The nurse anticipates that he will have a higher risk for postoperative complications involving which body system?

- A. Circulatory system
- B. Digestive system
- C. Nervous system
- D. Respiratory system

Ans.....

36. Which of the following surgical patients is at a greater risk for alterations in body image?

- A. A 19-year-old woman who had a repair of large facial laceration
- B. A 42-year-old woman who has had gallbladder surgery
- C. A 14-year-old boy who underwent a repair of a fractured clavicle
- D. A 52-year-old man who has had an inguinal hernia repair

Ans.....

37. The nurse is explaining the rationale for performing leg exercises after surgery. Which reason would the nurse include in the explanation?

- A. Increase venous return
- B. Maintain functional abilities
- C. Promote respiratory function
- D. Provide diversional activities

Ans.....

38. When preparing a patient who has diabetes mellitus for surgery, the nurse should be aware of which of the following potential surgical risks associated with this disease?

- A. Altered metabolism and excretion of drugs
- B. Fluid and electrolyte imbalance
- C. Respiratory depression from anaesthesia
- D. Slow wound healing

Ans.....

39. The Theatre Suite is primarily designed to promote?

- A. Electrical safety
- B. Medical and surgical asepsis
- C. Comfort and privacy of the patient
- D. Communication among the surgical team

Ans.....

40. There is a break in sterile technique when the scrub nurse touches.....

- A. the facemask with sterile gloved hands.
- B. sterile gloved hands to the sterile gown at chest level.
- C. the drape at the incision site with sterile gloved hands.
- D. the sterile gown at the navel level with sterile gloved hands.

Ans.....

SECTION B (20 MARKS)

ANSWER BOTH QUESTIONS IN THE ANSWER BOOKLET PROVIDED. EACH QUESTION SHOULD BE ANSWERED ON A FRESH PAGE

1. Tabulate the differences between benign and malignant tumours. **(10 marks)**
2. A 24-year-old man is scheduled for hernia repair and is on admission on your ward.
State how you will prepare him for surgery under:
 - a. Psychological care. **(5 marks)**
 - b. Physiological care. **(5 marks)**
