 - A. Nutritional status
 - B. Body mass index
 - C. Vital signs
 - D. General appearance

29. Tetanus is contracted by.....
- A. Contact with the skin
 - B. Consumption of contaminated food
 - C. Inhalation of droplets containing the bacillus
 - D. Exchange of body fluids during sexual intercourse
30. A patient with tetanus infection often dies from.....
- A. Destruction of nerve fibres
 - B. Spasms of mouth muscles
 - C. Destruction blood
 - D. Spasms of respiratory muscles
31. A client with a diagnosis of gout will show which of the following in the blood.
- A. Uric acid level of 8.0mg/dl
 - B. Calcium level of 9.0 mg/dl
 - C. Phosphorus level of 3.0mg/dl
 - D. Uric acid level of 5.0mg/dl
32. A 34-year-old female presented to the emergency unit after waking up with unilateral facial paralysis. On physical examination, she has flattening of her forehead and nasolabial fold on the affected side, difficulty closing her eye lid, and a tingling sensation on that side as well. With your knowledge about the nervous system and its functions, which cranial nerve is responsible for her condition?
- A. CN IX
 - B. CN IV
 - C. CN V
 - D. CN VI
33. An aspirate of synovial fluid from a patient with rheumatoid arthritis reveals which of the following Findings?
- A. cloudy synovial fluid
 - B. presence of organisms
 - C. bloody synovial fluid
 - D. presence of urate crystals
34. Mr. Alex Kumi, 59 years has been admitted to the stroke unit with the diagnosis of ischaemic stroke with right sided hemiplegia. Mr. Kumi was assessed to have increase in intracranial pressure (ICP). The best position to put Mr. Kumi will be to.....
- A. Support the legs with pillows
 - B. Elevate the legs of the patient
 - C. Elevate the head of bed
 - D. Turn him to his side
35. In acute urethritis, the commonest symptom is.....
- A. Dysuria
 - B. Pelvic pain
 - C. Urethral discharge
 - D. Increased temperature

36. Gouty arthritis is usually precipitated by

- A. a reduction in intake of vitamins
- B. an increase intake of vitamins
- C. an increase intake of purines
- D. an increase intake alcohol

37. A reduction of calcium levels in the blood usually results from.....

- A. defective vitamin D metabolism
- B. exposure to radiology
- C. increased consumption of protein-rich foods
- D. increased consumption of lead.

38. The common infectious agent that causes osteomyelitis include:

- A. Salmonella typhi
- B. Staphylococcus aureus
- C. Clostridium welchii
- D. Sycobacterium tubercle

39. In osteoporosis, fractures commonly occurs in the.....

- A. Long bones
- B. Flat bones
- C. Short bones
- D. Cranium

40. In osteoporosis, the risk of fracture increases among.....

- A. The children
- B. The adolescents
- C. The elderly
- D. The infants

41. The hormone that is commonly associated with osteoporosis is.....

- A. progesterone
- B. prolactin
- C. oxytocin
- D. oestrogen

42. Nursing care for a 17-year-old girl admitted with tetanus should be primarily directed towards

- A. Careful monitoring of urinary output
- B. Decreasing external stimuli
- C. Encouraging high intake of fluid
- D. Giving adequate diet

43. Which of the following is an early complication of meningitis?

- A. Cerebral oedema
- B. Deafness
- C. Hydrocephalus
- D. Paralysis
