

44. Which of the following sets of symptoms will suggest that a patient is suffering from meningitis ruling out tetanus?

- A. Fever, headache, vomiting, opisthotonus
- B. Fever, headache, trismus, opisthotonus
- C. Fever, headache, trismus, spasms
- D. Photophobia, trismus, headache, opisthotonus

45. Kernig's sign is a characteristic sign on

- A. Brain tumour
- B. Cerebral palsy
- C. Meningitis
- D. Osteomyelitis

46. Under certain circumstances the virus that causes chickenpox can also cause:

- A. German measles
- B. Athlete's foot
- C. Hepatitis
- D. Herpes zoster

47. The four stages of Grandmal seizures in sequential order are:

- A. Aura, Clonic, Tonic and Coma stage
- B. Aura, Tonic, Clonic and Coma stage
- C. Clonic, Tonic, Coma and Aura stages
- D. Tonic, Coma, Clonic and Aura stages

48. Which of the diagnostic investigations below is not likely to be requested for a patient who has a migraine?

- A. Encephalography
- B. Brain scan
- C. Skull X-ray
- D. Endoscopic scan

49. After a lumbar puncture procedure, the nurse instructs the patient to:

- A. Lie in the supine position for at least 6 hours
- B. Drink 2-3 Liters of water
- C. Perform physiotherapy as instructed
- D. Keep the oxygen mask on to facilitate breathing

50. The nurse is dressing a wound on the left leg of a patient diagnosed of tetanus. Which technique is she likely to use?

- A. Dress wound with alcohol and cover with povidone solution and gauze
- B. Dress wound with Hydrogen peroxide, normal saline and leave the wound uncovered
- C. Dress wound with normal saline, alcohol and leave the wound uncovered
- D. Dress the wound with Hydrogen peroxide, normal saline and cover with povidone solution and gauze

51. The definite investigation for osteoporosis is:

- A. Arthroscopy
- B. Bone Scan
- C. DEXA
- D. D-Dimer

52. Electroencephalography is done to confirm the diagnosis of:
- Arteriovenous haemorrhage
 - Cerebral embolism
 - Epilepsy
 - Spinal cord compression
53. A doctor performing a lumbar puncture suspect that the patient is having a subarachnoid haemorrhage because of the presence of?
- Blood
 - Pus
 - Protein
 - Glucose
54. The nurse advises a patient undergoing lumbar puncture to avoid jerking during the procedure; this will prevent:
- Dye reaching the brain
 - Free flow of dye
 - Penetration of the needle
 - Spinal cord injury
55. To control diabetes mellitus, the nurse should advise the patient to take the following foods in moderation EXCEPT
- Cabbage
 - Bread
 - Fruit
 - Milk
56. The hormone that regulates the reabsorption of calcium and phosphorous is
- Aldosterone
 - Parathormone
 - Somatostatin
 - Thyroxin
57. In teaching a patient and family to administer insulin at home, the nurse
- Demonstrate the action of insulin to only the patient
 - Demonstrate how to take other prescribed drugs
 - Demonstrate the ability to prepare a syringe with insulin solution
 - Demonstrate the action of oral drugs
58. During dietary care of a patient with nephrotic syndrome, the nurse is expected to
- restrict the patient from taking protein
 - design a diet to replace the protein lost in the urine.
 - Add more sodium to patient's meals
 - Allow to take oral fluids liberally

59. In caring for a patient suffering from nephrotic syndrome, the nurse should understand that...
- He may be conscious of the disorder but finds it difficult in coping with restrictions of the course of treatment.
 - He needs anti-diuretic drugs to enhance recovery.
 - He needs to wear tight clothing to reduce the occurrence of oedema.
 - He keeps away from other patients at the ward.
60. In providing nursing care for a client diagnosed of diabetes mellitus, the patient said he enjoys eating pastries. The nurse's response should be
- "Consult your counselor before your take pastries"
 - "Take pastries in moderation"
 - "You should eat pastries freely"
 - "You must avoid eating pastries"
61. A nurse has collected data on a client with diabetes mellitus. The FBS is 130 mg/dl, temperature 38°C, respiration is 22 breathes per minute, and blood pressure 140/80mmHg. Which of the Following is the most concern to the nurse?
- Pulse rate
 - Blood pressure
 - Blood glucose
 - Temperature
62. In caring for a patient suffering from acute renal failure, the nurse is to.....
- Serve fluids liberally
 - Avoid serving energy foods
 - Inform patient to adhere to his previous lifestyle
 - Observe for signs of infection.
63. The principal signs of gout DO NOT include:
- Excruciating pain
 - Swollen joint
 - Frequent discharges
 - Difficulty in movement
64. The common infectious agent that causes osteomyelitis include:
- Salmonella typhi
 - Staphylococcus aureus
 - Clostridium welchii
 - Mycobacterium tubercle
65. The posterior lobe of the pituitary gland secretes:
- Antidiuretic hormone and oxytocin
 - Progesterone and oxytocin
 - Aldosterone and oestrogen
 - Cortisol and calcitonin.

66. The immediate diagnostic test a nurse can conduct on a patient suffering from diabetes later in a day is.....
 A. Urea and creatinine
 B. Fasting blood sugar
 C. Flood nitrogen level.
 D. Random blood sugar.
67. The thyroid gland produces the following hormones EXCEPT:
 A. Calcitonin
 B. Cortisol
 C. Thyroxine
 D. Triiodothyronine.
68. In diabetes mellitus, the priority of the nurse is to correct
 A. Fluid balance
 B. Knowledge deficit
 C. Altered nutrition
 D. Ineffective family coping
69. In nephritic syndrome, the urine is reduced in volume and characteristically contains large amounts of.....
 A. Proteins
 B. Ions
 C. Urea
 D. Nitrogen
70. The adrenal cortex secretes.....
 A. Thyroxine and cortisol
 B. Oestrogen and cortisol
 C. Aldosterone and cortisol
 D. Oxytocin and cortisol
71. The structures that deliver urine into the bladder are called.....
 A. Ureters
 B. Urethras
 C. Calyces
 D. Hilum
72. The small masses of crystals formed in the joints of patients suffering from gout are called.....
 A. Typhi
 B. Tophi
 C. Salates
 D. Uric acid
73. In dietary control of a patient diagnosed of gout, the nurse must instruct the patient to avoid:.....
 A. Liver, kidney and sardines
 B. Liver, and fish alone
 C. Fish and eggs

D. Meat and green vegetables.

74. Intravenous pyelogram is an investigation used to.....

- A. Isolate bacteria in the urine
- B. Identify tumours in the lumbar region
- C. Exclude underlying abnormality of the renal tract.
- D. Identify the colour of pus from an abscess

75. The common feature in a client with Alzheimer's disease is:

- A. Difficulty in performing new tasks
- B. Problems with concrete thinking
- C. Recent memory loss
- D. Problems with learning

76. Slow movement is described as:

- A. Hypokenetics
- B. Hypokenesia
- C. Bradykenesia
- D. Brady kinetics

77. Risk factors associated with cardiovascular accident include

- I. Epstein- barr virus
- II. hypertension
- III. polycythemia
- IV. pre-existing cardiovascular disease

- A. I,II and III
- B. I, II and IV
- C. II, III, and IV
- D. I, II, III, and IV

78. A common cause of cretinism is.....

- a. hypoadrenalism
- b. hypothyroidism
- c. hyperadrenalism
- d. hyperadrenalism

79. Management of diabetes mellitus is directed toward.....

- a. reducing metabolic activities
- b. establishing and maintaining metabolic control
- c. treatment of complications to avoid death
- d. increasing the body's insulin resistance

80. The components of management of diabetes mellitus include

- I. Diet
- II. Exercise
- III. Fasting
- IV. Medication
- A. I, II and III
- B. I, II and IV
- C. II, III and IV
- D. I, II, III and IV

SECTION B

ANSWER ONLY ONE QUESTION FROM THIS SECTION

QUESTION ONE

Mr Kofi Frani, aged 44years, has been admitted to the medical ward with liver Cirrhosis as a result of alcoholism.

- a. State Six (4) clinical features which will make you suspect that he is going into hepatic coma (2 marks)
- b. Describe the management of Mr Frani in the following areas:
 - i. Diet (6 marks)
 - ii. Observation (6 marks)
- c. What health education would you give to Mr Frani on discharge (6 marks)

QUESTION TWO

Mr. Yanson, a 45-year-old man is admitted to your ward with duodenal ulcer.

State FOUR cardinal signs and symptoms of Mr. Yanson's condition. – 4marks

Outline FIVE precipitating factors of Mr. Yanson's illness - 5 marks

What education will you give to Mr. Yanson after confirmation of duodenal ulcer? - 11 marks

QUESTION THREE

Kofi Tetey, 35 years old is admitted to the ward a diagnosis of bacterial meningitis. He is conscious but ill.

- a. State Five (5) physical assessment findings that would help with the diagnosis (5marks)
- b. State four investigations for that would be carried out on Mr Tetey to conclude diagnosis (4marks)
- c. State two groups of drugs that may be prescribed, give one example from each (2 marks)
- d. Describe how you would manage Mr Tetey for the first 48 hours (9 marks)
