

Index number:

Signature:

D. Terbinafine

E. Nystatin

32. Pick the odd one out:

A. Fluconazole

B. Ketoconazole

C. Clotrimazole

D. Miconazole

E. Caspofungin

33. A female patient reports with fungal infection on the scalp. The physician assistant prescribes a medication that inhibits microtubules in the fungal cells. Which one of the following antifungal agents performs this action?

A. Fluconazole

B. Griseofulvin

C. Nystatin

D. Terbinafine

E. Flucytosine

34. A student reported to your health facility with cough, sore throat and fever. The doctor prescribed an antibiotic which works by inhibiting transpeptidase. Which one of the following is this antibiotic?

A. Ciprofloxacin

B. Nitrofurantoin

C. Amoxycillin

D. Trimethoprim

E. Paracetamol

35. An adult male with G6PD deficiency reported with urinary tract infection. All of the following antibiotics are suitable for use in this patient, except?

A. Sulphonamides

Index number:

Signature:

- B. Ceftriaxone
- C. Cefuroxime
- D. Amoxicillin-clavulanic acid
- E. Ampicillin

36. A lady reports to your clinic with complains of acne and was given an antibiotic lotion that inhibits the activity of the 50S subunit of the bacterial ribosome. All of the following antibiotics do not perform such action, except?

- A. Tetracycline
- B. Clindamycin
- C. Ciprofloxacin
- D. Moxifloxacin
- E. Trimethoprim

37. A patient having tuberculosis of the lungs was started on antibiotics. This patient reports of red-orange discolouration of his urine after taking the prescribed antibiotic. Which one of the following antibiotics does this side effect occur?

- A. Rifampin
- B. Flucloxacillin
- C. Azithromycin
- D. Ampicillin
- E. Meropenem

38. Pick the odd one out:

- A. Prednisolone
- B. Hydrocortisone
- C. Dexamethasone
- D. Acyclovir
- E. Betamethasone

Index number:

Signature:

39. An adult male report with a painful red eye and was given an eye antibiotic ointment that inhibits the activity of the 30S subunit of the bacterial ribosome. All of the following antibiotics do not perform such action, except?

- A. Tetracycline
- B. Ciprofloxacin
- C. Penicillin
- D. Clindamycin
- E. Diclofenac

40. A 32-year-old female developed severe acne and was put on an antibiotic for 2 weeks. She developed jaundice, dark urine and generalized itchiness whilst on this antibiotic. Which one the following antibiotics has this side effect commonly occurring?

- A. Erythromycin
- B. Ceftriaxone
- C. Ciprofloxacin
- D. Cefuroxime
- E. Amoxicillin

41. A child is rushed to the emergency with fever and loss of consciousness. Further examination and laboratory investigations shows meningitis for which an antibiotic was prescribed. This child had a previous reaction to penicillin drug. Which one of the following antibiotics is contraindicated in this patient?

- A. Erythromycin
- B. Azithromycin
- C. Ceftriaxone
- D. Ciprofloxacin
- E. Clindamycin

Index number:

Signature:

42. Pick the odd one out:

- A. Penicillin
- B. Bacitracin
- C. Vancomycin
- D. Polymyxins
- E. Trimethoprim

43. Which one of the following is not a bactericidal antibiotic?

- A. Vancomycin
- B. Ciprofloxacin
- C. Rifampicin
- D. Macrolides
- E. Bacitracin

44. A 20-year-old lady was put on an antibiotic for acne. She later reported that she develops a rash on her skin only when she walks in the sun but the rash disappears when she is indoors. Which one the following antibiotics has this side effect?

- A. Tetracycline
- B. Clindamycin
- C. Amoxycillin
- D. Flucloxacillin
- E. Cefuroxime

45. Your patient developed a pneumonia and reported to the clinic. After examination, the doctor gave a medication that was not affected by the penicillinase enzyme of the bacteria. Which one of the following is this antibiotic?

- A. Penicillin G
- B. Penicillin V
- C. Amoxicillin-clavulanic acid

Index number:

Signature:

D. Amoxicillin

E. Ampicillin

46. All the following are side effects of steroids, except?

A. Peptic ulcer

B. Hypertension

C. Reduced blood glucose

D. Delayed wound healing

E. Cataract

47. A 15-year-old is brought to your health facility with sore throat and also has a previous reaction to penicillin antibiotics. The doctor prescribes a drug that inhibits the activity of the 50S subunit of the bacterial ribosome. Which one of the following antibiotics perform such action?

A. Ciprofloxacin

B. Erythromycin

C. Vancomycin

D. Levofloxacin

E. Aspirin

48. A patient was given Amoxicillin-clavulanic acid for the treatment of pneumonia. She reports back with bloody mucoid diarrhoea. What is the name of this side effect?

A. Intestinal obstruction

B. Hepatitis

C. Pseudomembranous colitis

D. Appendicitis

E. Gonorrhoea

49. Which one of the following antimalaria has sporozoitocidal effect on the malaria parasites?

A. Pyrimethamine

B. Mefloquine

Index number:

Signature:

C. Primaquine

D. Artesunate

E. Sulphonamides

50. All of the following are side effects of steroids, except?

A. Gastritis

B. Immunosuppression

C. Activation of infections

D. Activation of tuberculosis

E. Hypotension

51. A lady reports to your clinic with complains of acne and was given an oral antibiotic that inhibits the activity of the 30S subunit of the bacterial ribosome. All of the following antibiotics do not perform such action, except?

A. Chloramphenicol

B. Azithromycin

C. Clindamycin

D. Doxycycline

E. Linezolid

52. Pick the odd one out:

A. Albendazole

B. Mebendazole

C. Pyrantel

D. Levamisol

E. Cetirizine

Index number:

Signature:

53. A patient reports with fungal infection at the fourth webspace of the right foot. the medical officer prescribes a medication that inhibits 14 α -demethylase enzyme. All of the following antifungal agents inhibit this enzyme, except?

- A. Miconazole
- B. Fluconazole
- C. Terbinafine
- D. Ketoconazole
- E. Clotrimazole

54. All the following are contraindicated in G6PD deficient patient, except?

- A. Chloroquine
- B. Mefloquine
- C. Sulphonamides
- D. Ceftriaxone
- E. Nitrofurantoin

55. A G6PD deficient patient reported with lower abdominal pain, dysuria and frequency of urination. All of the following antibiotics are suitable for use in this patient, except?

- A. Cefuroxime
- B. Amoxicillin-clavulanic acid
- C. Nitrofurantoin
- D. Ceftriaxone
- E. Cefixime

56. An alcoholic comes to your health facility with chronic cough and weight loss and was diagnosed as having tuberculosis of the lungs. Among his medication was an antibiotic that inhibits the activity of RNA polymerase. Which one of the following antibiotics perform such action?

- A. Levofloxacin

Index number:

Signature:

- B. Rifampin
- C. Dicloxacillin
- D. Clindamycin
- E. Gentamicin

57. A female patient reports with fungal infection at the fourth webspace of the right foot. The physician assistant prescribes a medication that incorporates abnormal nucleotides into the fungal cell DNA. Which one of the following antifungal agents performs this action?

- A. Griseofulvin
- B. Clotrimazole
- C. Flucytosine
- D. Itraconazole
- E. Amphotericin B

58. A patient was given Amoxicillin-clavulanic acid for the treatment of pneumonia. She reports back with bloody mucoid diarrhoea. What is the treatment of this side effect?

- A. Cefuroxime
- B. Ceftriaxone
- C. Vancomycin
- D. Flucloxacillin
- E. Dicloxacillin

59. Which one of the following is not a bactericidal antibiotic?

- A. Metronidazole
- B. Isoniazid
- C. Sulphonamides
- D. Ampicillin
- E. Daptomycin

Index number:

Signature:

60. A 60-year-old lady developed multiple boils and was put on an antibiotic for 2 weeks. Patient developed jaundice, dark urine and generalized itchiness whilst on this antibiotic. Which one the following antibiotics has this side effect commonly occurring?

- A. Flucloxacillin
- B. Ampicillin
- C. Ceftriaxone
- D. Cefuroxime
- E. Ciprofloxacin

SECTION B

Answer all questions (40 MARKS)

1. A 50-year-old male had symptoms of painful urination, frequency and urgency of micturition. A urine culture and sensitivity requested showed *Klebsiella* sp. isolated with sensitivities as follows:

Cefpodoxime- sensitive	Erythromycin- resistant
Clindamycin- resistant	Ofloxacin- sensitive
Moxifloxacin- sensitive	Vancomycin- resistant
Sulphonamides- sensitive	Ciprofloxacin- sensitive
Nitrofurantoin- sensitive	Cephalexin- resistant
Meropenem- resistant	Ceftriaxone- sensitive
Levofloxacin- sensitive	Amoxicillin- clavulanic acid- resistant

Index number:

Signature:

I. Name 8 antibiotics which will be effective to treat this bacterial infection. (8 MARKS)

II. Name 6 antibiotics which will be ineffective in treating this infection. (6 MARKS)

II. Later test showed patient has G6PD deficiency full defect. Name 6 antibiotics which should be avoided in treating this bacterial infection. (6 MARKS)

2. A 28-year-old female is brought to the hospital with fever, headache, malaise and general body pain. Laboratory test showed that she tested positive for malaria. The available antimalaria medications are as follows:

Quinine	Clindamycin
Chloroquine	Doxycycline
Primaquine	Proguanil
Mefloquine	Artesunate

I. If patient has G6PD deficiency, which 4 of the following antimalaria is contraindicated in this patient? (8 MARKS)

II. Which 4 antimalarial drugs listed above are suitable for a G6PD deficient patient. (8 MARKS)

III. Which 2 antimalarial drugs listed above that have antibacterial properties? (4 MARKS)
