

E. Respiratory system Chest pain

65. A patient with a history of penicillin allergy accidentally took cefpodoxime for respiratory tract infection. All the following would be present on assessment, except?

- A. Jaundice
- B. Pruritus
- C. Low blood pressure
- D. Wheezing
- E. Angioedema

66. Your patients report with fever, palpitation, dizziness, vomiting and fullness in the left ear. The neurological symptom amongst these presenting complaints is:

- A. Palpitation
- B. Vomiting
- C. Dizziness
- D. Fullness in the left ear
- E. Fever

67. Where is the brachial artery pulse located?

- A. Outer surface of the small toe
- B. In-between the big toe and index toe
- C. At the antecubital fossa
- D. Above the medial malleolus
- E. Both A and C

68. A patient report with severe pallor. Which of the examination findings would be seen on assessment of this patient?

- A. History of urination three times during the day
- B. History of passage of bloody urine
- C. History of excessive eating 4 times a day
- D. History of blood seen in toilet bowl during passage of stools
- E. B and D

69. Which of the follow does not suggest a chronic liver disease?

- A. White nails
- B. Jaundice
- C. Spider naevi
- D. Pruritus
- E. Distended neck veins

70. Two days after starting malaria treatment, a patient report to the emergency with the passage of red-coloured urine throughout urination. This symptom is described as:

- A. Diuresis
- B. Initial haematuria
- C. Dyspareunia
- D. Total haematuria
- E. Dysuria

71. All the following organs do not present with right lumbar region pain, except:

- A. Rectum
- B. Left lobe of the liver
- C. Descending colon
- D. Urinary Bladder
- E. Right Kidney

72. Normal respiratory rate of adults:

- A. 12-20 cycles per minute
- B. 24-30 cycles per minute
- C. 40-60 cycles per minute
- D. 60-110 cycles per minute
- E. 110-160 cycles per minute

73. A 38-week gestation pregnant patient comes with pain in the right loin and fever. The likely cause of this symptom may include:

- A. Malaria
- B. Myocarditis
- C. Pyelonephritis
- D. Right inguinal hernia
- E. Ectopic pregnancy

74. Genitourinary system symptom:

- A. Low libido
- B. Diarrhoea
- C. Dizziness
- D. Anal pain
- E. Tremors

75. Which of the following is not an abnormality during examination of the face?

- A. Loss of forehead wrinkle
- B. Ptosis of the left eye
- C. Loss of nasolabial folds
- D. Absent philtrum
- E. Pink lips

76. Cardiovascular system symptom:

- A. Stridor
- B. Expiratory wheeze
- C. Rhinorrhea
- D. Intermittent night cough
- E. Hoarseness of voice

77. A dehydrated patient will not have:

- A. sunken eyes on inspection
- B. cracked lips and dry tongue
- C. loss of skin turgor
- D. blood pressure of 110/ 70 mmHg
- E. oliguria

78. The following organs do not present with pain in the left iliac fossa, except:

- A. Pancreas
- B. Left Ovary
- C. Left kidney
- D. Left lobe of the liver
- E. Sigmoid colon

79. After complaining about right loin pain, which of the following examination findings suggests a pyelonephritis?

- A. Suprapubic auscultation
- B. Epigastric palpation
- C. Renal angle tenderness

- D. Dizziness
- E. Cough

80. During abdominal examination, auscultation of the abdomen showed absent bowel sounds. This means:

- A. No bowel mobility
- B. Reduced bowel mobility
- C. Fluid in the peritoneal cavity
- D. Distended intestines
- E. Increased bowel mobility

81. Pick the odd one out:

- A. Easy fatigability
- B. Vertigo
- C. Dizziness
- D. Ankle swelling
- E. Sweating Profusely

82. A 13-year-old patient reports to the hospital with low haemoglobin level. Which of the following assessment findings will confirm haemolysis as the cause of her anaemia?

- A. Temperature of 36.7degree Celsius measure in her axilla
- B. The presence of anaemia and amber coloured urine
- C. Both yellowing of her sclera and pallor
- D. Capillary refill less than 2 seconds
- E. Bluish palms and soles

83. Nurse, please I have been passing fresh blood in my stools. Which of the following explains the patient's symptom?

- A. Stridor
- B. Palpitation
- C. Rest pain
- D. Claudication
- E. Haematochezia

84. Pick the odd one out:

- A. Tenesmus
- B. Diarrhoea
- C. Tinnitus
- D. Jaundice
- E. Vomiting

85. A patient reported to the hospital with painful swollen left leg. Which of the following findings confirms cellulitis?

- A. Differential warmth
- B. Reduced distal pulses
- C. Presence of an abscess
- D. A and C only
- E. All of the above

86. Genitourinary symptom:

- A. Stridor
- B. Terminal haematuria
- C. Jaundice
- D. Intermittent night cough
- E. Hoarseness of voice

87. Your sister-in-law who has been having difficulty achieving pregnancy reports to you about taking isotretinoin for acne given to her by a friend but missed her menstrual period 2 months ago. Which of the following would be most important during history taking?

- A. A pregnancy test was done prior to starting medication
- B. Face has become smoother
- C. Whether her acne has subsided
- D. Whether her teeth have become white
- E. A and C

88. A 25-year-old female presents with generalised abdominal pain. Which of the following would be much important in terms of preventing maternal mortality?

- A. Yellowing of both eyes
- B. Tenderness over all nine abdominal regions
- C. Pregnancy test
- D. Blood pressure of 110/70mmHg
- E. Capillary refill less than 2 seconds

89. Nurse, please I get breathless and coughs a lot at night with ankle swelling. Which one of the following symptoms explains this patient's complaint?

- A. Stridor
- B. Palpitation
- C. Orthopnea
- D. Paroxysmal nocturnal dyspnoea
- E. Hoarseness of voice

90. A 38-year-old woman complains of swelling of both feet. Inspection of both feet was normal and you want to palpation to confirm oedema. Which of the following is correct concerning lower limb palpation for oedema?

- A. You hold the space in-between the big toe and index toe for 10 minutes
- B. You feel for pulsations in-between the big toe and index toe for 20 minutes
- C. You palpate posterior to the posterior medial malleolus for 10 seconds
- D. You press on the nails of both big toe and index toe for 30 minutes
- E. You feel the temperature over the whole feet for 20 minutes

91. A 21-year-old missed her menstrual period 2 months ago and now presents with sudden onset abdominal pain and profuse sweating. Vaginal examination elicited severe suprapubic pain upon moving the cervix horizontally to the left and to the right. This examination finding is called:

- A. Vaginal tenderness
- B. Dyspareunia
- C. Strangury
- D. Cervical excitation tenderness
- E. Renal angle tenderness

92. A 37 week's pregnant woman reports to the antenatal care with right leg swelling, shortness of breath and haemoptysis. As part of your assessment, you would like to feel for the pulses on the lower limb. Which one of the following is not a pulse on the lower limb?

- A. Popliteal pulse
- B. Posterior tibial pulse
- C. Femoral pulse
- D. Carotid pulse
- E. Dorsalis pedis pulse

93. Your friend wants to know the meaning of diarrhoea. Which one of the following would you tell her?

- A. Bilirubin
- B. Hard stools
- C. Bloody mucoid stools passed once since morning
- D. Whitish chalky stools
- E. Yellowish watery stools passed 4 times since last night

94. Examination of the mouth shows the following:

- A. Dental caries
- B. Inflamed gum
- C. Inflamed tonsils
- D. Cyanosis of the lips and tongue
- E. All of the above

95. A colleague nurse reported to you that a patient has central cyanosis. Which of the following sites of the patient will you confirm this sign?

- A. Scalp and both ears
- B. Sclera
- C. Tongue
- D. Palms of both hands
- E. Anterior triangle

96. All the following organs does not present with hypogastric pain, except:

- A. Duodenum
- B. Spleen
- C. Jejunum
- D. Descending colon
- E. Stomach

97. A 30-year-old male reports of shortness of breath on exertion and weakness. You think it is anaemia and wants to check for pallor. Which one of the following areas will you check for pallor?

- A. Scalp
- B. Conjunctiva
- C. Anterior chest wall
- D. Perineum
- E. Dorsum of both hands

98. A patient report with bipedal oedema. Which of the following additional findings suggests chronic kidney disease?

- A. Black colouration of scalp hair
- B. Periorbital oedema
- C. Jaundice
- D. Cyanosis
- E. Diarrhoea

99. All the following organs do not present with epigastric pain, except:

- A. Caecum
- B. Appendix
- C. Transverse colon
- D. Descending colon
- E. Rectum

100. A 21-year-old reports to your health facility with right loin pain associated with dysuria. Further assessment showed the possibility of right pyelonephritis. Which one of the following examination findings confirm such diagnosis?

- A. Auscultation of the lower abdomen
- B. Auscultation of the right hypochondriac region
- C. Right renal angle tenderness on palpation
- D. Percussion over the right groin
- E. Inspection of the abdomen

101. A 22-year-old patient presented to the clinic with complaints of vomiting 6 times and passage of watery stools 10 times since morning. On assessment, you think she is dehydrated. Which of the following is false concerning dehydration?

- A. Sunken eyes
- B. Loss of skin turgor
- C. Dry mucous membranes
- D. Capillary refill of one second
- E. No urine passed

102. Where is the carotid artery pulse located?

- A. Below the angle of the jaw
- B. In-between the big toe and index toe
- C. At the antecubital fossa
- D. Above the medial malleolus
- E. Both A and C

103. A patient was knocked down by a moving vehicle and was brought to the emergency. Percussion of the left lung showed hyper resonant sound. This means:

- A. There is accumulation of blood in the left lung
- B. There is air accumulation in the left lung
- C. There is fibrosis of the right lung
- D. There is accumulation of water in the right lung
- E. There is a normal right lung

104. Pick the odd one out:

- A. Palpitation
- B. Straining on micturition
- C. Easy fatigability
- D. Claudication
- E. Ankle oedema

105. Pick the odd one out:

- A. Palpitation
- B. Dysuria
- C. Easy fatigability
- D. Claudication
- E. Pinkish frothy sputum

106. A patient report with severe pallor. Which of the laboratory investigation(s) would be appropriate when assessing this patient?

- A. Full blood count
- B. Blood sodium levels
- C. Blood proteins
- D. Stool routine examination
- E. A and D

107. After eating fufu and palm-nut soup by the roadside, a patient reported to your hospital feeling weak or having generalized body discomfort. Which of the following symptom describes this complaint?

- A. Palpitation
- B. Dizziness
- C. Malaise
- D. Fever
- E. Vomiting

108. You saw a new born breastfeeding on the ward who turned bluish and breathless to feed. This likely suggests:

- A. Cardiovascular system aetiology
- B. Gastrointestinal system aetiology
- C. Genitourinary system aetiology
- D. Musculoskeletal system aetiology
- E. Nervous system aetiology

109. The pulmonary area of the heart is usually situated at:

- A. 3rd left intercostal space mid-axillary line
- B. 2nd left intercostal space
- C. 4th left intercostal space midclavicular line
- D. 4th right intercostal space midclavicular line
- E. 5th left intercostal space mid-axillary line

110. A patient presented with oedema of both feet and dorsum of both hands. In addition, you noticed she was breathless and this may be due to a likely fluid collection in the pleural space. Which of the following will you find on assessment?

- A. Stony dullness on lung percussion
- B. Absent breath sounds on auscultation
- C. Dullness on auscultation
- D. Vesicular breath sounds
- E. A and B only

111. Nurse, please my baby breaths fast and turns blue during breastfeeding. Which one of the following systems does this symptom belong to?

- A. Cardiovascular system
- B. Respiratory system
- C. Genitourinary system
- D. Nervous system
- E. Gastrointestinal system

112. A patient reported to your clinic with complains of

- I. poor sleep
- II. vomiting
- III. ankle swelling
- IV. intermittent difficulty in breathing at night
- V. cough which is productive of frothy sputum.

The cardiovascular assessment involves:

- A. I, II and IV only
- B. I, IV, and V only
- C. III, IV and V only
- D. II, III, IV and V only
- E. II, III and V only

113. The tricuspid area of the heart is usually situated at:

- A. 3rd left intercostal space mid-axillary line
- B. 2nd left intercostal space
- C. 4th left intercostal space midclavicular line
- D. 4th left intercostal space at the left sternal border
- E. 5th left intercostal space mid-axillary line

114. A pain from a small intestine will present at which site on the anterior abdominal wall?

- A. Right hypochondriac region
- B. Hypogastric region
- C. Right iliac region
- D. Left hypochondriac region
- E. Umbilical region

115. A 12-year-old patient reports with complains of vomiting, headache and warm touch. You want to confirm the rise in temperature as fever. Which of the following defines fever?

- A. Temperature less than 35.5 degree Celsius measured in mouth
- B. Temperature less than 33.5 degree Celsius measured in mouth
- C. Temperature of 37.2 degree Celsius measured in mouth
- D. Temperature of 37.0 degree Celsius measure in right axilla
- E. Temperature less than 37.2 degree Celsius measure in left axilla

116. Which one of the following on assessment confirms a hydrocele?

- A. Passage of urine through the base of the penis
- B. An inguinal swelling the extends into the scrotum
- C. The presence of only one testis in the right scrotum
- D. A tensed scrotum that illuminates light
- E. An inguinal swelling with visible or palpable cough impulse

117. The normal apex beat of the heart is usually situated at:

- A. 3rd left intercostal space mid-axillary line
- B. 4th right intercostal space midclavicular line
- C. 4th left intercostal space midclavicular line
- D. 1st left intercostal space mid-axillary line
- E. 5th left intercostal space midclavicular line

118. When palpating the areas of the heart, which of the following shows the normal position of the apex beat?

- A. Second left intercostal space anterior axillary line
- B. Fifth left intercostal space mid-clavicular line
- C. Fourth left intercostal space mid-clavicular line
- D. Fourth left intercostal space mid-axillary line
- E. B and C

119. Normal heart rate of adults:

- A. 60-100 beats per minute
- B. 90-180 beats per minute
- C. 110-160 beats per minute
- D. 200-250 beats per minute
- E. 85-95 beats per minute

120. Upon assessing your patient on the ward, you noticed the palms being yellowish but not the sclera of the eye. This signifies:

- A. Vomiting
- B. Non-existent icterus
- C. Partial constipation
- D. Abdominal pain
- E. Pruritus
