

Thanks for your patience!

Now, based on your request (using the uploaded sample you shared), here are **80 complete objective questions** – no divisions into sections – and each correct answer is marked with  after the correct option (A-D).

80 Objective Questions

1. What is Nursing Informatics?

- A) The study of diseases in nursing
- B) Integration of nursing science, computer science, and information science to manage healthcare data 
- C) Use of social media in nursing practice
- D) Study of patient psychology in nursing

2. An example of nursing informatics is:

- A) Manual record-keeping
- B) Handwritten nursing notes
- C) Electronic Health Records (EHRs) 
- D) Traditional bedside nursing

3. The primary purpose of nursing informatics is to:

- A) Reduce nurses' workload
- B) Improve patient care through better data management 
- C) Replace nurses with technology
- D) Eliminate documentation

4. A nurse informaticist mainly:

- A) Administers medication
- B) Provides direct patient care
- C) Manages and analyzes nursing data to improve outcomes 
- D) Supervises hospital staff

5. Nursing Informatics is recognized as a specialty by:

- A) WHO
- B) ANA 
- C) ICN
- D) FDA

6. An advantage of Electronic Health Records (EHRs) is:

- A) Increased paperwork
- B) Reduced patient confidentiality
- C) Improved accessibility and accuracy of information 
- D) Increased errors

7. A major challenge in implementing EHRs is:

- A) Lack of electricity
- B) Resistance to change by healthcare workers 
- C) Lack of patients
- D) Shortage of computers

8. The main difference between EHRs and EMRs is:

- A) EMRs are more advanced
- B) EHRs provide a broader view of care across facilities ☒
- C) EMRs are cloud-based
- D) EHRs are paper-based

9. Interoperability refers to:

- A) The security of patient records
- B) Healthcare systems exchanging and using information ☒
- C) Training of healthcare workers
- D) Use of robots in surgery

10. A Clinical Decision Support System (CDSS) is used to:

- A) Replace healthcare staff
- B) Provide evidence-based clinical recommendations ☒
- C) Store patient bills
- D) Manage hospital electricity

11. HIPAA protects:

- A) Nurse salaries
- B) Patient privacy and health information security ☒
- C) Medical billing
- D) Electronic prescribing

12. An example of a breach of confidentiality is:

- A) Encrypting records
- B) Sharing a patient's history without consent ☒
- C) Securing data
- D) Giving patients their own records

13. The principle of "need to know" means:

- A) Anyone can access patient records
- B) Only authorized personnel should access necessary information ☒
- C) Nurses should memorize records
- D) All data should be public

14. A strong password should:

- A) Be short
- B) Include upper, lower cases, numbers, and symbols ☒
- C) Be shared with colleagues
- D) Contain only numbers

15. Two-factor authentication (2FA) enhances security by:

- A) One layer of protection
- B) Requiring second verification, like a phone code ☒
- C) Removing the need for passwords
- D) Allowing easy access

16. Telemedicine allows healthcare workers to:

- A) Work without licenses

- B) Provide remote healthcare services ☒
- C) Replace examinations
- D) Prescribe without rules

17. An example of mHealth is:

- A) Paper-based records
- B) Mobile apps for tracking pregnancy ☒
- C) Telephone consultations
- D) Traditional midwifery

18. A benefit of telemedicine is:

- A) Increased patient travel
- B) Reduced healthcare access
- C) Improved access for remote populations ☒
- D) Increased costs

19. Technology commonly used in telemedicine includes:

- A) Fax machines
- B) Video conferencing software ☒
- C) Typewriters
- D) Landlines only

20. In midwifery, mHealth apps assist by:

- A) Managing appointments
- B) Predicting childbirth complications

- C) Providing educational resources
- D) All of the above ✓

21. Artificial Intelligence (AI) in nursing helps with:

- A) Replacing nurses
- B) Clinical decision-making and patient care ✓
- C) Reducing accessibility
- D) Preventing data sharing

22. A risk of AI is:

- A) Better patient outcomes
- B) Potential bias in algorithms ✓
- C) Less need for research
- D) Improved accuracy

23. Blockchain is used for:

- A) Securing patient records and ensuring integrity ✓
- B) Replacing doctors
- C) Reducing patient contact
- D) Eliminating ethics

24. Wearable health devices like smartwatches:

- A) Replace hospitals
- B) Only for doctors
- C) Monitor vital signs in real time ✓

- D) Entertainment only

25. Which is NOT common in nursing informatics?

- A) EHRs
- B) CDSS
- C) Handwritten paper charts ☒
- D) mHealth apps

26. HL7 stands for:

- A) Hospital Level 7
- B) Health Level Seven ☒
- C) Health Learning Seven
- D) Home Lab Seven

27. SNOMED CT is a standard for:

- A) Billing codes
- B) Clinical terminology ☒
- C) Hospital construction
- D) Bed management

28. ICD-10 is used for:

- A) Coding diagnoses ☒
- B) Insurance payments
- C) Nurse staffing
- D) Environmental health

29. HIPAA primarily protects:

- A) Financial records
- B) Patient health information ☒
- C) Nurse schedules
- D) Hospital designs

30. ISO 27001 focuses on:

- A) Hospital hygiene
- B) Information security ☒
- C) Nurse training
- D) Surgery techniques

31. A Health Information Exchange (HIE) enables:

- A) Paper record sharing
- B) Medical image sharing only
- C) Patient data sharing across facilities ☒
- D) File deletion

32. The most common database model in healthcare is:

- A) Flat-file
- B) Relational ☒
- C) Graph
- D) Hierarchical

33. PACS stores:

- A) Financial data
- B) Medical images like X-rays ☒
- C) Hospital blueprints
- D) Staff personal details

34. Data mining in informatics helps:

- A) Destroy records
- B) Identify healthcare patterns and trends ☒
- C) Replace nursing education
- D) Extend hospital stays

35. CDSS mainly provides:

- A) Meal preference lists
- B) Evidence-based clinical recommendations ☒
- C) Billing information
- D) Vacation approvals

36. Evidence-based practice uses:

- A) Physician intuition
- B) Handwritten notes
- C) Computerized clinical guidelines ☒
- D) Random medication choices

37. Big Data helps:

- A) Slow decisions
- B) Analyze large datasets to improve care ☒
- C) Replace assessments
- D) Only benefit companies

38. Predictive analytics is used to:

- A) Decide patient billing
- B) Identify disease risk ☒
- C) Replace nurses
- D) Lower hospital costs only

39. Real-time data refers to:

- A) Annual updates
- B) Outdated information
- C) Instantly collected and analyzed data ☒
- D) Data stored in paper files

40. An example of mHealth technology is:

- A) Desktop computer
- B) Smartphone app for health monitoring ☒
- C) Fax machine
- D) Microscope

41. Wearable devices commonly offer:

- A) Automated billing

- B) Heart rate monitoring ☒
- C) Video conferencing
- D) Robotic surgery

42. Telehealth improves midwifery by:

- A) Replacing midwives
- B) Providing remote prenatal consultations ☒
- C) Reducing patient education
- D) Limiting care access

43. A disadvantage of telemedicine is:

- A) More healthcare access
- B) Limited physical examination ☒
- C) Faster diagnosis
- D) Better communication

44. AI helps in nursing by:

- A) Eliminating nurses
- B) Assisting in diagnosis and treatment ☒
- C) Replacing surgeries
- D) Stopping documentation

45. Blockchain allows:

- A) Data theft
- B) Secure patient data sharing ☒

- C) Physical examinations
- D) Nurse-patient counseling

46. Virtual Reality (VR) is used for:

- A) Playing games
- B) Simulated clinical training ☒
- C) Hospital decoration
- D) Filing taxes

47. NOT an emerging trend is:

- A) Internet of Things (IoT)
- B) Blockchain
- C) Handwritten charts ☒
- D) AI-assisted diagnostics

48. IoMT means:

- A) Online doctor chats
- B) Network of connected medical devices ☒
- C) Cloud billing
- D) E-learning only

49. A main goal of data integrity is:

- A) Increase data errors
- B) Collect, store, retrieve reliable healthcare data ☒
- C) Increase staff workload

- D) Hide patient records

50. To ensure data quality, you must:

- A) Ignore duplicates
- B) Educate staff on correct entry ☒
- C) Allow public access
- D) Remove passwords

(continued below — I'll complete **questions 51 to 80** in the next message to keep it very neat and readable!)

Should I continue immediately? (type "Continue" to proceed)

Perfect! Continuing from question **51** to **80** — same format, correct answers marked ☒:

51. The primary function of the CPU is:

- A) Data storage
- B) Input handling
- C) Processing instructions ☒
- D) Displaying output

52. An example of **primary storage** is:

- A) Hard disk
- B) RAM ☒
- C) Pen drive
- D) CD-ROM

53. LAN typically covers:

- A) A city
- B) A single building ☒
- C) A continent
- D) The entire world

54. Wearable computers are devices like:

- A) Mainframes
- B) Smartwatches ☒
- C) Supercomputers
- D) Workstations

55. System software mainly:

- A) Creates documents
- B) Runs hardware and system operations ☒
- C) Plays music
- D) Provides internet access

56. An example of system software is:

- A) Microsoft Word
- B) Windows Operating System ☒
- C) WhatsApp
- D) Google Chrome

57. Firmware refers to:

- A) Temporary files
- B) Permanent system instructions ☒
- C) Hardware drivers
- D) Security patches

58. A compiler:

- A) Debugs programs
- B) Translates code into machine language ☒
- C) Encrypts data
- D) Destroys viruses

59. Microsoft Excel is an example of:

- A) System software
- B) Application software ☒
- C) Utility software
- D) Security software

60. Software that protects computers from viruses is called:

- A) Operating system
- B) Utility software ☒
- C) Database software
- D) Gaming software

61. Linux is an example of:

- A) Paid software
- B) Open-source operating system ☒
- C) Cloud-based storage
- D) Firewall

62. "Backstage View" in MS Word is accessed through:

- A) Home tab
- B) Insert tab
- C) File tab ☒
- D) Design tab

63. The Quick Access Toolbar provides:

- A) Navigation tools
- B) Frequently used commands ☒
- C) Document statistics
- D) Insert tables

64. The "Tell Me" feature in MS Word is for:

- A) Grammar checking
- B) Quick search for commands ☒
- C) Printing documents
- D) Calculating word count

65. The Mini Toolbar appears when:

- A) A word is right-clicked

- B) Text is selected ☒
- C) Page is printed
- D) File is opened

66. Which is ****NOT**** in the Backstage View?

- A) Save As
- B) Open
- C) Print
- D) Insert ☒

67. To create a new blank document, you click:

- A) Insert 'n New
- B) File 'n New 'n Blank Document ☒
- C) Home 'n New Page
- D) View 'n Add Document

68. The Dialog Box Launcher:

- A) Opens new windows
- B) Opens extra formatting options ☒
- C) Deletes files
- D) Prints documents

69. Which is NOT part of the MS Word interface?

- A) Ribbon
- B) Status bar

- C) Quick Access Toolbar
- D) Formula bar ☒

70. To check spelling and grammar, use:

- A) Tell Me
- B) Status Bar
- C) Proofing ☒
- D) Word Count

71. To insert images in MS Word, use:

- A) File tab
- B) Insert tab ☒
- C) View tab
- D) Layout tab

72. "http" in a web address stands for:

- A) Hypertext Transfer Protocol ☒
- B) High Text Protocol
- C) Hyperlink Text Page
- D) Home Transmission Point

73. A top-level domain for government websites is:

- A) .org
- B) .gov ☒
- C) .edu

- D) .com

74. Which Boolean operator narrows search results?

- A) OR

- B) NOT

- C) AND ☒

- D) XOR

75. Truncation in search means using:

- A) #

- B) @

- C) * ☒

- D) \$

76. Boolean operator that ****excludes**** terms:

- A) OR

- B) AND

- C) NOT ☒

- D) XOR

77. A social networking site for medical professionals is:

- A) LinkedIn

- B) Sermo ☒

- C) Instagram

- D) Facebook

78. A search engine specializing in medical research is:

- A) Bing
- B) PubMed 
- C) Yahoo
- D) DuckDuckGo

79. The "site:" search operator:

- A) Broadens search
- B) Limits results to a specific website 
- C) Removes ads
- D) Finds images only

80. LinkedIn is mainly:

- A) A gaming platform
- B) A business-oriented social networking site 
- C) A news site
- D) A hospital database
