

KAAF UNIVERSITY COLLEGE

SCHOOL OF NURSING AND MIDWIFERY

DEPARTMENT OF MIDWIFERY AND PUBLIC HEALTH NURSING

END OF SECOND SEMESTER EXAMINATIONS

COURSE: KNUR 108: NURSING PROCESS. LEVEL 200 MIDWIFERY AND PHN

22ND MAY, 2024

Duration: 1 HOUR

GENERAL INSTRUCTION TO STUDENTS:

1. Do not leave your seat unless you are given permission by an Invigilator
2. Please avoid the use of red and green ink.
3. Do not communicate in any way with any other candidate in the examination room.
4. All rough work must be written in the answer booklet provided. A line should be drawn through any rough work to indicate to the examiner that it is not part of the work to be marked. Writings should be done in pencils.
5. You should write legibly in black or blue ink
6. PDA's (Personal Digital Assistants) and mobile phones are NOT permitted in this examination.
7. You are not to leave the examination room until after the first hour of the examination.
8. You are not to leave the exam hall 30 minutes to the end of the examination

INSTRUCTIONS

Read the questions carefully. For each of the following questions, select the most appropriate and shade on the sheet provided.

1. What is the name of the assessment that focuses on past medical history, family history, the reason for admission, medications currently taking, previous hospitalization, nutrition, complete physical assessment?
☒ A. Comprehensive assessment
B. Emergency assessment
C. Focus assessment
D. Initial assessment
2. In this step of the nursing process, you prioritize the diagnosis in order of importance and figure out what nursing interventions need to take place to accomplish these as well as goals to achieve your care plan
A. Assessment
B. Evaluation
C. Implementation
☒ D. Planning
3. What purpose does the nursing process serve?
A. Assisting family members in making important healthcare decision
B. Help other healthcare professional know what is going on with the client
C. Organize information so the doctor knows what is wrong with the client
☒ D. Providing nurses with a framework to aid them in delivering comprehensive care
4. Which could be considered objective data from the following?
A. A patient's report of moderate pain
☒ B. A temperature of 100.1-degree Fahrenheit
C. Complaints nausea
D. Feeling sleepiness
5. Which nursing diagnosis should receive the highest priority in the case of a female patient who is diagnosed with deep vein thrombosis?
☒ A. Altered peripheral tissue perfusion related to venous congestion
B. Fluid volume excess relating to peripheral vascular disease
C. Impaired gas exchanged relating to an increased
D. Risk of injury from edema

6. Which of the following is a risk nursing diagnosis statement?
- A. Constipated because of fecal impaction
 - B. Risk for Constipation related to dehydration
 - C. Risk for diarrhea
 - ☒ D. Risk for falls related to unstable balance
7. Prioritization of task belongs to which phase of the nursing process?
- A. Assessment
 - B. Evaluation
 - C. Implementation
 - ☒ D. Planning
8. Which of the following is true regarding nursing diagnosis?
- A. A nursing diagnosis is usually the etiology of the disease
 - B. A nursing diagnosis is any problem related to the health of a patient
 - ☒ C. Both medical and nursing diagnosis can be converted into a nursing intervention
 - D. When writing a nursing diagnosis, place the adjective before the noun modified
9. Which of the following statement is true about the nursing process?
- ☒ A. A nursing care plan is a product of the nursing process
 - B. A nursing process is written together with a nursing care plan
 - C. Both the nursing process and the nursing care plan are purely critical thinking strategies
 - D. The nursing process is not an accurate clinical theory
10. Which desired outcome written by the nurse is correctly written and measurable?
- A. Client will have a normal bowel pattern by April 2
 - ☒ B. The client will lose 4 lbs. within next 2 weeks
 - C. The nurse will provide skin care at least 3 times each day
 - D. The client will breathe better after resting for 10 minutes
11. The nursing diagnosis is Risk for impaired skin integrity related to immobility and pressure secondary to pain and presence of a cast. Which of the following desired outcomes should the nurse include in the care plan?
- A. Client will be able to turn self by day 3
 - B. Client will state pain relieved within 30 minutes after medication
 - C. Pressure will be prevented by repositioning client every 2 hours
 - ☒ D. Skin will remain intact and without redness during hospital stay

12. While assisting a client from bed to chair, the nurse observes that the client looks pale and is beginning to perspire heavily. The nurse would then do which of the following activities as a reassessment?
- A. Document client's vital signs taken just prior to moving the client
 - B. Help client back to bed immediately
 - C. Help client into the chair but more quickly
 - ☒ D. Observe client's skin color and take another set of vital signs
13. After instructing the client on crutch walking technique, the nurse should evaluate the client's understanding by using which of the following methods?
- A. Achievement of 90 on written test
 - B. Explanation
 - C. Have client explain procedure to the family
 - ☒ D. Return demonstration
14. A client on the nursing unit is terminally ill but remains alert and oriented. Three days after admission, the nurse observes signs of depression. The client states, "I'm tired of being sick. I wish I could end it all." What is the most accurate and informative way to record this data in a nursing progress note?
- A. Client appears to be depressed, possibly suicidal
 - B. Client does not want to live any longer and is tired of being ill
 - C. Client reports being tired of being ill and wants to die
 - ☒ D. Client states, "I'm tired of being sick. I wish I could end it all."
15. The nurse evaluates the client's progress and determines that one of the nursing diagnoses on the client's care plan has been resolved. How should the nurse document this so that it is best communicated to the healthcare team?
- ☒ A. Draw a single line through the diagnosis on the care plan and write the nurse's initials and date
 - B. Recopy the care plan without the resolved diagnosis
 - C. Use Liquid Paper to "white out" the resolved diagnosis on the care plan
 - D. Write a nursing process note indicating that the outcome goals have been achieved
16. A client who complains of nausea and seems anxious is admitted to the nursing unit. The nurse should take which of the following actions regarding completion of the admission interview?
- A. Ask the charge nurse to interview the client while the admitting nurse calls the doctor for anti-nausea and anti-anxiety medication
 - ☒ B. Do the interview as soon as some uninterrupted time is available in order to address the client's concerns
 - C. Do the interview immediately, directing the majority of the questions to the client's spouse

- D. Help the client to get settled and do the interview the next morning when the client is rested.
17. The nurse would do which of the following activities during the diagnosing phase of the nursing process? Select all that apply.
- I. Collect and organize client information
 - II. Analyze data
 - III. Identify problems, risk, and client strengths
 - IV. Develop nursing diagnoses
- A. I, II
☒ B. II, III
C. I, III
D. I, IV
27. The functional health pattern assessment data states: "Eats three meals a day and is of normal weight for height." The nurse should draw which of the following conclusions about this data?
- ☒ A. Client has a wellness diagnosis
B. Client has an actual health problem
C. Collaborative health problem needs to be written
D. Possible nursing diagnosis exists
28. For the nursing diagnostic statement, Self-care deficit: feeding related to bilateral fractured wrists in casts, what is the major related factor or risk factor identified by the nurse?
- A. Discomfort
B. Deficit
C. Feeding
☒ D. Fractured wrists
29. The nurse would make which of the following inferences after performing the appropriate client assessment?
- A. Client is hypotensive
B. Client relays anxiety about blood work
C. Oxygen saturation of 95%
☒ D. Respiratory rate of 20 breaths per minute
30. The nurse would write which of the following outcome statements for a client starting an exercise program?
- A. Client will be able to walk a mile
B. Client will have no alteration in breathing during the walk
☒ C. Client will progress to walking a 20-minute mile in one month
D. Client will walk quickly three times a day

31. The nurse decides it would be beneficial to the client to allow the client's infant granddaughter to visit before the client's scheduled heart transplant. Before implementing this intervention, the nurse should collaborate with which of the following?
- A. Hospital administration
 - B. Security department
 - ☒ C. Staff, Client and Family
 - D. Ward unit
32. The nurse informs the physical therapy department that the client is too weak to use a walker and needs to be transported by wheelchair. Which step of the nursing process is the nurse engaged in at this time?
- A. Assessment
 - B. Evaluation
 - ☒ C. Implementation
 - D. Planning
33. A desired outcome for a client immobilized in a long leg cast read; Client will state three signs of impaired circulation prior to discharge. When the nurse evaluates the client's progress, the client is able to state that numbness and tingling are signs of impaired circulation. What would be an appropriate evaluation statement for the nurse to write?
- A. Client understands the signs of impaired circulation
 - ☒ B. Goal met: Client cited numbness and tingling as sign of impaired circulation
 - C. Goal not met: Client able to name only two signs of impaired circulation
 - D. Goal not met: Client unable to describe signs of impaired circulation
34. A nurse is performing an initial assessment for a client. Which of the following would be considered subjective information received during the assessment?
- A. The client has a pinpoint rash on the face and trunk
 - ☒ B. The client rates pain at a level of 6 on the numeric rating scale
 - C. The client weighs 186 pounds
 - D. The client's blood pressure increases when the provider enters the room
35. When planning nursing care for a client, objectives should be SMART. Specific, measurable, action-oriented, realistic, and timely. Which example best describes an outcome that is measurable?
- ☒ A. The client will ambulate to the end of the hallway within 2 days
 - B. The client will have control of his back pain
 - C. The client will verbalize feelings about her diagnosis
 - D. The client's family will agree to the methods of treatment

36. A nurse is caring for a 2-day-old infant who requires phototherapy for treatment of jaundice.

Which information would be included as part of the nurse's subjective assessment?

- A. The amount of the infant's last feeding
- B. The infant's weight at birth
- C. The most recent bilirubin level
- ☒ D. The parent had jaundice as a newborn

37. A nurse is assessing a client who is being admitted to the hospital from home for knee surgery. Which part of the assessment would be included with an admission assessment but not with a routine focused assessment?

- A. Assessment of knee range of motion
- ☒ B. Assessment of the cause of the client's knee injury
- C. Assessment of the client's pain
- D. Assessment of the client's vital signs

38. The nurse is planning care for a client and prioritizes health promotion and accident prevention. Which of the following age groups does this client most likely fall into, with accidents and injuries from recreational activities as the main health concern?

- ☒ A. Adolescence
- B. C Early adulthood
- C. Middle adulthood
- D. School age

39. A nurse is caring for a client who has been sexually abused. Which of the following interventions should the nurse implement to establish rapport and to demonstrate safety?

- ☒ A. Assess the client's stress level before performing procedures
- B. Delay treatment until the client can talk about the situation
- C. Let the client spend time alone in a quiet area
- D. Respond to shocking information by ignoring or disregarding the account

40. A nurse has assessed a client during the admission and is formulating a nursing care plan based on the provider's orders and results of the assessment. Which of the following is a true statement regarding a nursing care plan?

- ☒ A. A nursing care plan guides the nurse for how to provide care for the client
- B. A nursing diagnosis focuses on finding a solution to the patients' problem
- C. A nursing diagnosis is based on a judgment call made by the nurse about the client's condition.
- D. A nursing diagnosis must be validated by the provider

41. During which part of the client interview would it be best for the nurse to ask, "What's the weather forecast for today?"
- A. Body
 - ☒ B. Closing
 - C. Introduction
 - D. Orientation
42. The nurse is most likely to collect timely, specific information by asking which of the following questions?
- A. "How are you today?"
 - B. "What would you like to talk about?"
 - ☒ C. "Where does it hurt?"
 - D. "Would you describe what you are feeling?"
43. The nurse should avoid asking the client which of the following leading questions during a client interview.
- A. "Were you aware I've has this same type of surgery?"
 - B. "What medication do you take at home?"
 - C. "What would you like to talk about?"
 - ☒ D. "You are really excited about the plastic surgery, aren't you?"
44. The nurse needs to validate which of the following statements pertaining to an assigned client?
- A. A weight of 185 lbs. is recorded in the chart
 - B. The client has a hard, raised, red lesion on his right hand.
 - ☒ C. The client reported an infected toe
 - D. The client's blood pressure is 124/70. It was 118/68 yesterday.
45. Which of the following items of subjective client data would be documented in the medical record by the nurse?
- A. Cervical lymph nodes are palpable
 - ☒ B. Client feels nauseated
 - C. Client's face is pale
 - D. Nursing assistant reports client refused lunch
46. A nurse explains to a student that the nursing process is a dynamic process. Which of the following actions by the nurse best demonstrates this concept during the work shift?
- A. Nurse and client agree upon health care goals for the client
 - B. Nurse explains to the client the purpose of each administered medication
 - ☒ C. Nurse rapidly reset priorities for client care based on a change in the client's condition
 - D. Nurse reviews the client's history on the medical record

47. The client reports nausea and constipation. Which of the following would be the priority nursing action?
- ☒ A. Administer an anti-nausea medication
 - B. Collect a stool sample
 - C. Complete an abdominal assessment
 - D. Notify the physician
48. The nurse suspects that a client is withholding health-related information out of fear of discovery and possible legal problems. The nurse formulates nursing diagnoses for the client carefully, being concerned about a diagnostic error resulting from which of the following?
- A. Generalize from experience
 - B. Identifying with the client
 - ☒ C. Incomplete data
 - D. Lack of clinical experience
49. Which of the following descriptors is most appropriate to use when stating the "problem" part of a nursing diagnosis?
- ☒ A. Anxiety
 - B. Grimacing
 - C. Output 500 mL in 8 hours
 - D. Oxygenation saturation 93%
50. Which of the following statements about the nursing process is most accurate?
- A. Beginning in Florence Nightingale's days, nursing students learned and practiced the nursing process.
 - B. The nursing process is a four-step procedure for identifying and resolving patient problems.
 - ☒ C. The state board examinations for professional nursing practice now use the nursing process rather than medical specialties as an organizing concept.
 - D. Use of the nursing process is optional for nurses, since there are many ways to accomplish the work of nursing.
51. After determining a nursing diagnosis of acute pain, the nurse develops the following appropriate client-centered goal:
- A. Administer analgesic 30 minutes before physical therapy treatment.
 - B. Determine effect of pain intensity on client function.
 - C. Encourage client to implement guided imagery when pain begins.
 - ☒ D. Pain intensity reported as a 3 or less during hospital stay

52. Once a nurse assesses a client's condition and identifies appropriate nursing diagnoses, a:
- A. List of priorities is determined.
 - B. Physical assessment begins
 - ☒ C. Plan is developed for nursing care.
 - D. Review of the assessment is conducted with other team members.
53. Planning is a category of nursing behaviors in which:
- ☒ A. Client-centered goals and expected outcomes are established.
 - B. The client determines the care needed.
 - C. The nurse determines the health care needed for the client.
 - D. The Physician determines the plan of care for the client.
54. Priorities are established to help the nurse anticipate and sequence nursing interventions when a client has multiple problems or alterations. Priorities are determined by the client's:
- A. Future well-being.
 - B. Non-Emergent, non-life-threatening needs
 - C. Physician
 - ☒ D. Urgency of problem
55. A client centered goal is a specific and measurable behavior or response that reflects a client's:
- A. Desire for specific health care interventions
 - ☒ B. Highest possible level of wellness and independence in function.
 - C. Physician's goal for the specific client.
 - D. Response when compared to another client with a like problem.
56. As goals, outcomes, and interventions are developed, the nurse must:
- A. Be in charge of all care and planning for the client.
 - ☒ B. Be aware of and committed to accepted standards of practice from nursing and other disciplines.
 - C. Not change the plan of care for the client.
 - D. Be in control of all interventions for the client.
57. When establishing realistic goals, the nurse:
- A. Bases the goals on the nurse's personal knowledge.
 - ☒ B. Knows the resources of the health care facility, family, and the client.
 - C. Must have a client who is physically and emotionally stable.
 - D. Must have the client's cooperation.
58. To initiate an intervention the nurse must be competent in three areas, which include:
- A. Experience, advanced education, and skills.
 - ☒ B. Knowledge, function, and specific skills
 - C. Leadership, autonomy, and skills.
 - D. Skills, finances, and leadership.

59. Well formulated, client-centered goals should:
- A. Include Surgical procedures
 - ☒ B. Meet immediate client needs. \
 - C. None of the above
 - D. All of the above.
60. The following statement appears on the nursing care plan for an immunosuppressed client: The client will remain free from infection throughout hospitalization. This statement is an example of a (an):
- ☒ A. Expected outcome
 - B. Long-term goal
 - C. Nursing diagnosis
 - D. Short-term goal
61. The planning step of the nursing process includes which of the following activities?
- A. Assessing and diagnosing
 - B. Evaluating goal achievement.
 - C. Performing nursing actions and documenting them.
 - ☒ D. Setting goals and selecting interventions.
62. The nursing care plan is
- A. A documentation of client care.
 - B. A projection of potential alterations in client behaviors
 - C. A tool to set goals and project outcomes.
 - ☒ D. A written guideline for implementation and evaluation.
63. After determining a nursing diagnosis of acute pain, the nurse develops the following appropriate client-centered goal:
- A. Administer analgesic 30 minutes before physical therapy treatment.
 - B. Determine effect of pain intensity on client function.
 - C. Encourage client to implement guided imagery when pain begins.
 - ☒ D. Pain intensity reported as a 3 or less during hospital stay.
64. Which of the following nursing interventions are written correctly? A. Apply continuous passive motion machine during day.
- B. Change dressing once a shift.
 - ☒ C. Elevate head of bed 30 degrees before meals.
 - D. Perform neurovascular checks.
65. When calling the nurse consultant about a difficult client-centered problem, the primary nurse is sure to report the following:
- ☒ A. Client's concern about the current treatment.
 - B. Length of time the current treatment in place.
 - C. Physician's reluctance to change the current treatment plan.
 - D. The spouse's reaction to the client's dressing change.

66. The primary nurse asked a clinical nurse specialist (CNS) to consult on a difficult nursing problem. The primary nurse is obligated to.....
- ☐ A. Clarify the suggestions with the client and family members.
 - ☒ B. Discuss and review advised strategies with CNS.
 - ☐ C. Implement the specialist's recommendations.
 - ☐ D. Report the recommendations to the primary physician.
67. Which of the following statements about the nursing process is most accurate?
- ☐ A. Beginning in Florence Nightingale's days, nursing students learned and practiced the nursing process.
 - ☐ B. The nursing process is a four-step procedure for identifying and resolving patient problems.
 - ☒ C. The state board examinations for professional nursing practice now use the nursing process rather than medical specialties as an organizing concept.
 - ☐ D. Use of the nursing process is optional for nurses, since there are many ways to accomplish the work of nursing.
68. The systematic problem-solving approach towards providing individualized nursing care is known as _____.
- ☐ A. Nurses practice act
 - ☐ B. Nursing care plan
 - ☐ C. Nursing method.
 - ☒ D. Nursing process
69. Name the association established to develop, refine, and promote the taxonomy of nursing diagnostic terminology used by nurses.
- ☐ A. American nurses' association
 - ☐ B. Ethical Nursing Association
 - ☐ C. Humane Nursing Association
 - ☒ D. North American Nursing Diagnosis Association International
70. This step of the nursing process includes the systematic collection of all subjective and objective data about the client in which the nurse focuses holistically on the client-physical, psychological, emotional, sociocultural, and spiritual. Name this step.
- ☒ A. Assessment
 - ☐ B. Planning
 - ☐ C. Implementation
 - ☐ D. Diagnosis.

71. Name the assessment process that collects data about a problem that has already been identified and determines if the problem still exists or any changes.
- ☒ A. Focus assessment
 - B. Initial assessment
 - C. Emergency assessment
 - D. Non-invasive assessment
72. Information verbalized or stated by the client is called _____.
- A. Holistic data
 - B. Integral data
 - C. Objective data
 - ☒ D. Subjective data
73. This step begins after the care plan has been made and is recognized as the step where the nurse performs the interventions to achieve goals.
- A. Assessment
 - B. Diagnosis
 - ☒ C. Implementation
 - D. Planning
74. Name the stage where you determine if the patient has achieved the expected outcomes.
- A. Assessment
 - B. Diagnosis
 - ☒ C. Evaluation
 - D. Implementation
75. What purpose does the nursing process serve?
- A. Assisting family members in making important healthcare decisions
 - B. Help other healthcare professionals know what is going on with the client
 - C. Organize information so the doctor knows what is wrong with the client
 - ☒ D. Providing nurses with a framework to aid them in delivering comprehensive care
76. Which could be considered objective data from the following?
- A. A patient's report of moderate pain
 - ☒ B. A temperature of 100.1 degrees Fahrenheit
 - C. Complaints of nausea
 - D. Feelings of sleepiness.
77. To participate in goal setting clients must be:
- A. Able to read and write
 - ☒ B. Alert and have some degree of independence
 - C. Ambulatory and mobile
 - D. Be able to talk

78. A client-centered goal is a specific and measurable behavior or response that reflects a client's:
- A. Desire for specific health care interventions
 - ☒ B. Highest possible level of wellness and independence in function
 - C. Physician's goal for the specific client
 - D. Response when compared to another client with a like problem
79. A nurse is performing an initial assessment for a client. Which of the following would be considered subjective information received during the assessment?
- A. The client has a pinpoint
 - ☒ B. The client rates pain at a level of 6 on the numeric rating scale rash on the face and trunk
 - C. The client weighs 186 pounds
 - D. The client's blood pressure increases when the provider enters the room
80. When planning nursing care for a client, objectives should be SMART. Specific, measurable, action-oriented, realistic, and timely. Which example best describes an outcome that is measurable?
- ☒ A. The client will ambulate to the end of the hallway within 2 days
 - B. The client will have control of his back pain
 - C. The client will verbalize feelings about her diagnosis
 - D. The client's family will agree to the methods of treatment
