

KAUF UNIVERSITY COLLEGE

FACULTY OF HEALTH AND ALLIED SCIENCES

DEPARTMENTS OF NURSING, MIDWIFERY & PUBLIC HEALTH

KNUR 219 - HUMAN GROWTH & DEVELOPMENT (2 CR)

END OF SECOND SEMESTER EXAMINATION

MAY 2024

1. The following are factors that may influence the development of language EXCEPT?
 - A. Genetics
 - B. Environment
 - C. Culture
 - ☒ D. Nutrition
2. Which of the following is NOT a developmental task of adolescence?
 - A. Developing a sense of identity.
 - ☒ B. Developing a sense of intimacy.
 - C. Developing a sense of independence.
 - D. Developing a sense of morality.
3. The following statements describe developmental task of adulthood EXCEPT?
 - ☒ A. Caring for aging parents.
 - B. Developing intimate relationships.
 - C. Establishing a career.
 - D. Raising a family.
1. One of the participants attending a parenting class asks the teacher "What is the leading cause of death during the first month of life?"
 - ☒ A. Bacterial sepsis
 - B. Respiratory distress of newborn
 - C. Sudden Infant Death Syndrome
 - D. Neonatal hemorrhage
2. Which stage of development is most unstable and challenging regarding the development of personal identity?
 - ☒ A. Adolescence
 - B. Toddlerhood
 - C. Middle Childhood
 - D. Young adulthood
3. Which age group would have the most tendency towards eating disorders?
 - ☒ A. Adolescence
 - B. Toddlerhood
 - C. Preschool
 - D. Infant
4. When assessing an older adult, the nurse may expect an increase in:
 - A. Nail growth
 - ☒ B. Skin turgor
 - C. Urine residual
 - D. Nerve conduction velocity
5. A maternity nurse is providing instruction to a new mother regarding the psychosocial development of the newborn infant. Using Erikson's psychosocial development theory, the nurse would instruct the mother to
 - ☒ A. Allow the newborn infant to signal a need
 - B. Anticipate all of the needs of the newborn infant

- C. Avoid the newborn infant during the first 10 minutes of crying
D. Allow the infant to cry, once lessen, then attend to the infant
6. A mother of a three (3)-year-old tells a clinic nurse that the child is constantly rebelling and having temper tantrums. The nurse most appropriately tells the mother to:
- A. Punish the child every time the child says "no", to change the behavior
 - B. Allow the behavior because this is normal at this age period
 - ☒ C. Set limits on the child's behavior
 - D. Ignore the child when this behavior occurs
7. The parents of a two (2)-year-old boy arrive at a hospital for a visit. The child is in the playroom when the parents arrive. When the parents enter the playroom, the child does not readily approach the parents. The nurse interprets this behavior as indicating that:
- ☒ A. The child is withdrawn
 - B. The child is self-centered
 - C. The child has adjusted to the hospitalized setting
 - D. This is a normal pattern
8. The mother of a three (3)-year-old is concerned because her child still is insisting on a bottle at nap time and bedtime. Which of the following is the most appropriate suggestion to the mother?
- ☒ A. Do not allow the child to have the bottle
 - B. Allow the bottle during naps but not at bedtime
 - C. Allow the bottle if it contains juice
 - D. Allow the bottle if it contains water
9. Which of the following is NOT a characteristic of the cephalocaudal principle of development?
- A. Growth proceeds from the head to the toes.
 - B. Growth proceeds from the center of the body to the periphery.
 - ☒ C. Growth proceeds from the general to the specific.
 - D. Growth proceeds in a spiral fashion.
10. Which of the following is NOT a characteristic of the proximodistal principle of development?
- A. Growth proceeds from the center of the body to the periphery.
 - B. Growth proceeds from the head to the toes.
 - ☒ C. Growth proceeds in a sequential fashion.
 - D. Growth proceeds from the general to the specific.
11. Which of the following is NOT a developmental task of middle adulthood?
- A. Managing a career.
 - ☒ B. Caring for aging parents.
 - C. Adjusting to midlife changes.
 - D. Developing a sense of generativity.
12. The developmental task that is usually not relevant during late adulthood may include.....?
- ☒ A. Adjusting to retirement.
 - B. Coping with physical changes.
 - C. Maintaining social relationships.
 - D. Developing a sense of integrity.
13. The following characteristics are peculiar to Ericson's psychosocial crisis of initiative vs. guilt EXCEPT?

- A. Children are motivated to explore and learn new things.
 - B. Children are concerned about making mistakes.
 - C. Children feel guilty when they make mistakes.
 - ☒ D. Children develop a sense of purpose.
14. Which of the following is NOT a characteristic of the psychosocial crisis of industry vs. inferiority?
- A. Children are motivated to learn and achieve.
 - B. Children feel inferior when they fail.
 - C. Children develop a sense of competence.
 - D. Children develop a sense of belonging.
15. Which of the following is NOT a characteristic of the psychosocial crisis of identity vs. role confusion?
- A. Adolescents are trying to figure out who they are.
 - B. Adolescents are trying to find their place in the world.
 - ☒ C. Adolescents are concerned about making choices.
 - D. Adolescents are concerned about meeting the expectations of others.
16. Which of the following is NOT a characteristic of the psychosocial crisis of intimacy vs. isolation?
- A. Adults are concerned about forming close relationships.
 - B. Adults are concerned about being alone.
 - C. Adults are concerned about being rejected.
 - ☒ D. Adults are concerned about being interdependent.
9. A nurse is evaluating the developmental level of a two (2)-year-old. Which of the following does the nurse expect to observe in this child?
- A. Uses a fork to eat
 - ☒ B. Uses a cup to drink
 - C. Uses a knife for cutting food
 - D. Pours own milk into a cup
10. The nurse is providing an educational session to new employees, and the topic is abuse to the older client. The nurse tells the employees that which client is most characteristic of a victim of abuse
- ☒ A. A 90-year-old woman with advanced Parkinson's disease
 - B. A 68-year-old man with newly diagnosed cataracts
 - C. A 70-year-old woman with early diagnosed Lyme's disease
 - D. A 74-year-old man with moderate hypertension
11. The home care nurse is visiting an older female client whose husband died six (6) months ago. Which behavior, by the client, indicates ineffective coping?
- A. Visiting her husband's grave once a month
 - B. Participating in a senior citizens program
 - C. Looking at old snapshots of her family
 - ☒ D. Neglecting her personal grooming
12. A clinic nurse assesses the communication patterns of a five (5)-month-old infant. The nurse determines that the infant is demonstrating the highest level of developmental achievement expected if the infant:
- ☒ A. Uses simple words such as "mama"

- B. Uses monosyllabic babbling
 - C. Links syllables together
 - D. Coos when comforted
13. A nurse is preparing to care for a five (5)-year-old who has been placed in traction following a fracture of the femur. The nurse plans care, knowing that, which of the following is the most appropriate activity for this child?
- A. Large picture books
 - B. A radio
 - ☒ C. Crayons and coloring book
 - D. A sports video
14. A 16-year-old is admitted to the hospital for acute appendicitis, and an appendectomy is performed. Which of the following nursing interventions is most appropriate to facilitate normal growth and development?
- A. Allow the family to bring in the child's favorite computer games
 - B. Encourage the parents to room-in with the child
 - C. Encourage the child to rest and read
 - ☒ D. Allow the child to participate in activities with other individuals in the same age group when the condition permits.
15. The mother of a nine (9)-year-old who is four (4) feet tall asks a nurse which of the following car safety devices is the most appropriate to use. The best nursing response is which of the following?
- A. Booster belt
 - B. Seat belt
 - C. Front-facing convertible seat
 - ☒ D. Rear-facing convertible seat
16. The nurse is caring for an agitated older client with Alzheimer's disease. Which nursing intervention would most likely calm the client?
- A. Playing a radio
 - B. Turning the lights out
 - ☒ C. Putting an arm around the client's waist
 - D. Encouraging group participation
17. The nurse who volunteers at a senior citizens center is planning activities for the members who attend the center. Which activity would best promote health and maintenance for these senior citizens?
- A. Gardening every day for an hour
 - B. Aerobics 3 times a week for 30 minutes
 - C. Sculpting twice a week for 60 minutes
 - ☒ D. Walking 3 to 5 times a week for 30 minutes
18. Which of the following is NOT a characteristic of the psychosocial crisis of generativity vs. stagnation?
- A. Adults are concerned about making a difference in the world.
 - ☒ B. Adults are concerned about taking care of others.

- C. Adults are concerned about their own needs.
D. Adults are concerned about their legacy.
19. Which of the following is NOT a characteristic of the psychosocial crisis of integrity vs. despair?
- A. Adults look back on their lives with satisfaction.
B. Adults regret the choices they have made.
C. Adults feel they have lived a meaningful life.
D. Adults are concerned about death.
20. Which of the following theories is NOT related to human development?
- A. Psychoanalytic theory
B. Cognitive theory
C. Behavioral theory
D. Ecological theory
21. The nurse shows an understanding of the error group of aging theories when stating EXCEPT
- A. "Aging occurs differently for the various ethnic groups."
B. "Aging is a result of mistakes in our RNA and DNA metabolism."
C. "The free radical theory is an example of an error theory."
D. "Aging effects are really random and unpredictable"
22. The nurse implements the concepts of the activity theory of aging when instructing the older client with osteoarthritis to:
- A. Continue her daily walking routine.
B. Curtail further increases in physical activity.
C. Document preferred end-of-life interventions.
D. Avoid exposing herself to crowds.
23. A married couple retired to a life care community after the husband had heart surgery. The wife has always been physically and socially active and joined an aerobics class, knitting groups, and a book club shortly after moving to the community. She walks on a daily basis and swims twice a week. Her husband spends his days reading and watching television. He was never a social person and enjoys being by himself. Which of the sociological theories of aging best describes the couple?
- A. Role theory
B. Disengagement theory
C. Continuity theory
D. Personality theory
24. A community health nurse provides an annual flu prevention workshop at a local senior center. The activities include a lecture on preventing infections, which includes hand washing and limiting exposure to individuals who are ill, as well as an influenza immunization clinic. The nurse is basing her activities on what theory of aging?
- A. Wear and tear
B. Oxidative stress
C. Autoimmune
D. Free radical
25. The family member of a patient asks if vitamin C will prevent aging. In formulating an appropriate response, the nurse considers the:
- A. Free radical theory.
B. Autoimmune theory.
C. Wear-and-tear theory.

- D. Continuity theory.
26. The nurse is aware the theory of aging most likely to explain why the older population is at risk for autoimmune disorder is known as:
- ☒ A. Cross-link theory
 - B. Autoimmune theory
 - C. Free-radical theory
 - D. Error theory
27. A 66-year-old retired professional basketball player is admitted to the hospital for a total knee replacement due to osteoarthritis. In preparing preoperative teaching for this patient, the nurse includes which theory of aging to help him understand how the disease has progressed?
- A. Free radical theory
 - ☒ B. Wear-and-tear theory
 - C. Gene theory
 - D. Cross-link theory
28. Which of the following sociological theories of aging explains the decrease of activity later in life?
- ☒ A. Disengagement theory
 - B. Activity theory
 - C. Modernization theory
 - D. Age-stratification theory
29. According to Freud, someone who compulsively bites their nails might have experienced which of the following as a young child?
- A. An overly restrictive breastfeeding schedule.
 - ☒ B. Forced toilet training at a developmentally inappropriate age.
 - C. Poor bonding between mother and child.
 - D. Unstimulating activities during key phases of development.
30. According to Freud, the phases of psychosexual development establish our.....
- A. Behaviour
 - B. Cognition
 - C. Emotions
 - ☒ D. Personality
31. According to Freud, how might parents being overly demanding during toilet training affect a person's development?
- ☒ A. He might become obsessed with control and order.
 - B. He might be slower to reach puberty.
 - C. He would be more likely to smoke.
 - D. He would become focused on his genitalia
32. Which of Freud's stages of psychosexual development take place from age 6 to puberty in which the source of pleasure shifts from self to other people?
- A. Anal
 - B. Oral
 - ☒ C. Genital
 - D. Latency
33. A 16-year-old boy is hospitalized, according to Erik Erikson, what is an appropriate intervention?
- ☒ a. Tell the friends to visit the child

- b. Encourage the boy to learn missed school lessons
 - c. Call the priest to intervene
 - d. Ask the patient's girlfriend to visit.
34. A clinical instructor asks a nursing student to report about the psychosexual stages of development by Sigmund Freud. The following explains the latency period EXCEPT
- a. No psychosexual development takes place during this stage.
 - b. Energy is directed to physical and intellectual activities.
 - ☒ c. This stage begins at puberty and constitutes mature adult sexuality.
 - d. Children spend more time interacting with same-sex peers.
35. The following best describes the development of a school-age child EXCEPT.
- ☒ a. Death has yet no meaning
 - b. Same-sex peers are more important than family
 - c. Children enjoys playing board games and sports
 - d. Causes of injuries include bicycle crashes, head injuries, and sprains
36. The nurse is preparing to care for a toddler who is admitted due to fever, diarrhea, and vomiting. The doctor diagnosed the child with acute gastroenteritis. The following interventions are appropriate for the child EXCEPT.
- ☒ a. Inform the child of his scheduled ultrasound on day 5 of his hospitalization
 - b. Allow to bring his favorite pillow or provide activity e.g., blowing bubbles
 - c. Allow the child to hold the thermometer before getting the temperature
 - d. Provide an option between fruit cups and jellies for dessert.
37. A nurse instructor is preparing to conduct a seminar about Piaget's Theory of Cognitive Development. The current topic is the concrete operational stage. The following milestones during this stage should be included in the discussion, EXCEPT?
- a. Ability to think logic about objects and events
 - b. Ability to understand that an object does not affect its number, length, volume, or mass when it changes appearance or shape
 - c. Increased classification skills
 - ☒ d. Ability to exhibit propositional thought
38. Kim and her daughter Jane went grocery shopping to only buy essential things needed at home. As they went along the different sections of the store, Jane saw a limited-edition Barbie doll. She is tempted to get it but decides not to grab it for fear of being slapped. This behavior of Jane is considered to be in what stage of Kohlberg's Moral Development?
- a. Conventional Stage 3: Good Boy/Nice Girl Orientation
 - ☒ b. Preconventional Stage 1: Punishment/Obedience Orientation
 - c. Conventional Stage 2: Law and Order Orientation
 - d. Preconventional Stage 2: Instrumental Relativist Orientation
39. The nurse is caring for the mother of a newborn. The nurse recognizes that the mother needs more teaching regarding cord care because she
- a. Keeps the cord exposed to the air
 - b. Washes her hands before sponge bathing her baby
 - ☒ c. Washes the cord and surrounding area well with water at each diaper change

- d. Checks it daily for bleeding and drainage
40. A client telephones the clinic to ask about a home pregnancy test she used this morning. The nurse understands that the presence of which hormone strongly suggests a woman is pregnant?
- a. Estrogen
 - ☒ b. Human chorionic gonadotropin (HCG)
 - c. Alpha-fetoprotein (AFP)
 - d. Progesterone
41. The nurse is assessing a six-month-old child. Which developmental skills are normal and should be expected?
- a. Pulling up to a standing position
 - b. Can feed self with a spoon
 - ☒ c. Sits alone
 - d. Speaks in short sentences
42. Who developed a psychosocial theory that divided the developmental process into 8 stages?
- ☒ A. Erikson
 - B. Freud
 - C. Maslow
 - D. Rogers
43. What is the term used by Freud to describe the Oedipus complex, which is the child's sexual desire for the opposite-sex parent?
- A. The oral stage
 - B. The anal stage
 - ☒ C. The phallic stage
 - D. The Oedipus complex
44. According to Freud, the unconscious love and sexual desire of male children for their mother is called:
- A. Psychosexual theory
 - ☒ B. Electra complex
 - C. Oedipal complex
 - D. Pleasure principle
45. The discovery that the heritability of the Big Five personality traits is around 40% – 50% suggests that:
- A. The environment plays no role in personality.
 - B. Genes play no role in personality.
 - ☒ C. The environment plays an important role in personality.
 - D. The Big Five traits account for about half of our personality
46. According to Erik Erikson's theory, what is the primary conflict during infancy?
- ☒ A. Trust vs. Mistrust
 - B. Autonomy vs. Shame and Doubt
 - C. Initiative vs. Guilt
 - D. Industry vs. Inferiority
47. In Erikson's psychosocial theory, the resolution of the trust vs. mistrust stage leads to the development of:
- ☒ A. Autonomy

- B. Initiative
 - C. Hope
 - D. Competence
48. Which stage of Erikson's theory occurs during early childhood (ages 3 to 6)?
- A. Trust vs. Mistrust
 - B. Autonomy vs. Shame and Doubt
 - C. Initiative vs. Guilt
 - D. Industry vs. Inferiority
49. According to Erikson, the central conflict of the initiative vs. guilt stage involves:
- A. Establishing trust in caregivers
 - B. Developing a sense of independence
 - C. Exploring and taking initiative in activities
 - D. Achieving competence in academic tasks
50. During which stage of psychosocial development do individuals typically experience the conflict of identity vs. role confusion?
- A. Adolescence
 - B. Early childhood
 - C. Young adulthood
 - D. Middle adulthood
51. Erikson's theory posits that the resolution of the identity vs. role confusion stage leads to the development of:
- A. Intimacy
 - B. Integrity
 - C. Industry
 - D. Independence
52. The main challenge of the intimacy vs. isolation stage in Erikson's theory is to:
- A. Develop a sense of identity
 - B. Establish close relationships with others
 - C. Achieve career success
 - D. Preserve one's integrity
53. According to Erikson, the primary task of middle adulthood is to resolve the conflict of:
- A. Generativity vs. Stagnation
 - B. Integrity vs. Despair
 - C. Autonomy vs. Shame and Doubt
 - D. Industry vs. Inferiority
54. Generativity vs. stagnation is a stage in Erikson's theory associated with which age range?
- A. Adolescence
 - B. Early adulthood
 - C. Middle adulthood
 - D. Late adulthood
55. The central conflict in Erikson's generativity vs. stagnation stage revolves around:
- A. Forming intimate relationships
 - B. Establishing a sense of identity
 - C. Contributing to society and future generations
 - D. Achieving financial success
56. According to Erikson, the final stage of psychosocial development involves the resolution of:

- A. Trust vs. Mistrust
 - B. Identity vs. Role Confusion
 - C. Integrity vs. Despair
 - D. Autonomy vs. Shame and Doubt
57. Integrity vs. despair is a stage in Erikson's theory that typically occurs during:
- A. Adolescence
 - B. Early adulthood
 - C. Middle adulthood
 - D. Late adulthood
58. Erikson's integrity vs. despair stage focuses on the individual's reflection on:
- A. Establishing a career
 - B. Achieving intimacy
 - C. Life satisfaction and meaning
 - D. Financial stability
59. Which concept in Erikson's theory refers to the sense of competence and mastery in completing tasks?
- A. Initiative
 - B. Identity
 - C. Industry
 - D. Intimacy
60. In Erikson's theory, the term "ego identity" refers to:
- A. The conscious sense of self
 - B. The unconscious mind
 - C. Social roles and expectations
 - D. The superego's moral standards
61. According to Erikson, what is the consequence of unresolved conflicts in psychosocial development?
- A. Identity confusion
 - B. Personality disorders
 - C. Psychological distress
 - D. Maladaptive behaviors
62. Which factor did Erikson emphasize as crucial for healthy psychosocial development?
- A. Genetic predisposition
 - B. Environmental influences
 - C. Cognitive abilities
 - D. Physical health
63. Erikson's theory of psychosocial development suggests that individuals progress through stages in a:
- A. Sequential and irreversible manner
 - B. Random and unpredictable pattern
 - C. Hierarchical fashion
 - D. Circular progression
64. Erikson's psychosocial theory emphasizes the importance of _____ in shaping personality and behavior.
- A. Genetics
 - B. Early childhood experiences

- C. Educational attainment
 - D. Socioeconomic status
65. According to Erikson, the resolution of each psychosocial stage contributes to the development of a person's:
- A. Physical strength
 - B. Cognitive abilities
 - C. Emotional resilience
 - D. Moral reasoning
66. Erikson's theory highlights the role ofin influencing psychosocial development.
- Peer relationships
 - Parenting styles
 - Cultural norms
 - All of the above
67. Erikson's concept of "basic trust" refers to the belief that:
- One's actions have consequences
 - People are generally good and reliable
 - The world is a dangerous and unpredictable place
 - Success is determined by luck
68. Which of the following best describes Erikson's view of human development?
- A. Development is primarily determined by biology.
 - ☒ B. Development is driven by unconscious conflicts.
 - C. Development occurs through interactions with the environment.
 - D. Development follows a fixed and predetermined course.
69. Erikson's psychosocial theory has been criticized for its:
- A. Lack of empirical evidence
 - ☒ B. Overemphasis on early childhood experiences
 - C. Inability to account for cultural variations
 - D. Limited focus on cognitive development
70. Which theory of aging proposes that aging is primarily caused by the accumulation of damage to cells and tissues over time?
- A. Evolutionary theory of aging
 - ☒ B. Free radical theory of aging
 - C. Programmed aging theory
 - D. Wear and tear theory of aging
71. According to the free radical theory of aging, what contributes to cellular damage and aging?
- Genetic mutations
 - Accumulation of metabolic waste
 - Oxidative stress from reactive oxygen species
 - Decreased hormone production
72. Which theory of aging suggests that aging is genetically programmed and follows a predetermined sequence of events?
- A. Evolutionary theory of aging
 - B. Free radical theory of aging
 - ☒ C. Programmed aging theory
 - D. Wear and tear theory of aging
73. According to the programmed aging theory, aging is controlled by:
