

KAAF UNIVERSITY COLLEGE

DEPARTMENT OF NURSING

END OF SEMESTER EXAMINATION

NUTRITION AND DIETETICS (KNUR 206)

SECTION A (50 MARKS)

MULTIPLE CHOICE QUESTIONS; CHOOSE THE BEST ANSWER TO EACH QUESTION. ANSWER ALL QUESTIONS (2 HOURS 30MINS)

1. Factors that control weight include all these except
A. dieting B. Peer influence C. innovations. D. culture

2. Fruits, vegetables and cereals are potent sources of:
A. Antioxidants B. Unsaturated fat C. Saturated fat D. Free radicals

3. The leading source of antioxidants in the U.S. diet is:
A. Citrus fruits B. Spinach C. Coffee D. Egg yolks

4. The essential fatty acids that must be derived from the diet are:
A. Stearidonic acid and eicosatetraenoic acid
B. Eicosapentaenoic acid and docosapentaenoic acid
C. Linoleic and alpha-linoleic acid
D. Gamma-linoleic acid and arachidonic acid

5. All of the following statements about omega-3 fatty acids are true except:
A. They help to maintain healthy triglyceride and high-density lipoprotein
B. They have significantly contributed to the obesity epidemic
C. They are necessary for healthy infant growth and development
D. They play an important role in the production of hormones that govern numerous metabolic and biological processes

6. All of the following may be associated with scurvy except:

- A. Loss of appetite and irritability
- B. Diarrhoea and fever
- C. Tenderness and swelling in legs
- D. First symptom is altered mental status

7. The only fat-soluble antioxidant synthesized in the body is?

- A. Vitamin D
- B. Thiamine
- C. Ascorbic acid
- D. CoQ10

8. Good source of vitamin D include all except:

- A. blueberries
- B. Sunlight
- C. Salmon, tuna sardines and mackerel
- D. Fortified milk and other dairy products

9. One of the fat-soluble vitamins involved in coagulation is:

- A. Vitamin K
- B. Vitamin A
- C. Vitamin D
- D. Vitamin E

10. Products that contain live microorganisms in sufficient numbers to alter intestinal microflora and promote intestinal microbial balance are known as:

- A. Antibiotics
- B. Probiotics
- C. Fruits and vegetables
- D. Digestive enzymes

11. Nondigestible food ingredients that stimulate the growth and activity of certain bacteria in the colon are called:

- A. Insoluble fibre
- B. Probiotics
- C. Prebiotics
- D. Cellulose

12. A deficiency of thiamine (vitamin B1) in the diet causes:

- A. Osteopenia
- B. Beri-beri
- C. Protein malnutrition
- D. Scurvy

13. The USDA Dietary Guidelines for Americans advise:

- A. Limiting carbohydrates to 10 percent of daily calories
- B. Limiting total fat intake to 20 to 35 percent of calories
- C. Limiting protein to 10 percent of daily calories
- D. Limiting intake of fats and oils to 10 percent of daily calories

14. All of the following statements about vitamin B3 (niacin) are true except:

- A. It helps to release energy in carbohydrates, fat, and protein
- B. It improves blood lipid levels
- C. Deficiency causes beriberi
- D. It is involved in the synthesis of sex hormones

15. The average American consumes approximately how much sodium per day?

- A. 2,300 mg B. 230 mg C. 340 mg D. 3,400 mg

16. All of the following are potentially modifiable risk factors for osteoporosis except:

- A. Anorexia nervosa
- B. Chronically low intake of calcium and vitamin D
- C. Chronically low intake of vitamins C and B6
- D. Excessive alcohol consumption

17. Consuming fewer than 40grams of proteins per day may lead to:

- A. Hypoglycemia B. Kwashiorkor C. Marasmus D. Ketosis

18. Characteristics of successful dieters include all of the following except:

- A. Maintaining a daily food journal
- B. Counting calories
- C. Adhering to a strict eating plan
- D. Eliminating all carbohydrates from their diets

19. Iron supplements are frequently recommended for all of the following except:

- A. Women who are pregnant
- B. Sedentary workers
- C. Teenage girls
- D. Post-menopausal women

20. Ancient people saw food to have Powers
A. healing. B. physical C. emotional. D. psychological.
21. In the history of nutrition what was the vitamin deficiency British soldiers suffered from
A. A B. B C. C D. D
22. Which of these foods aids in controlling osteoporosis?
A. Milk B. Kontomire C. orange D. sunlight
23. The science of how the body uses food is
A. Nutrients B. Nutrition C. Food science D. Dietetics
24. The fuel for cell activity is known as
A. Nutrients B. Nutrition C. Food science D. Dietetics
25. Chocolate is an example of
A. nutrient dense food B. energy dense food C. vitamin dense food D. empty calorie food
26. Water is an example of
A. nutrient dense food B. energy dense food C. vitamin dense food D. empty calorie food
27. Water makes up about ----- of the body
A. 50%. B. 70%. C. 60%. D. 80%.
28. An example of inorganic nutrient is
A. vitamin C. B. Vitamin D. C. protein. D. minerals.
29. An example of organic nutrient is
A. vitamin C. B. Vitamin D. C. protein. D. minerals.

30. Which of these is an example of macronutrient?

A. vitamin C. B. Vitamin D. C. protein. D. minerals.

31. The following are all carbohydrates except

A. Starch. B. sugar. C. butter. D. fibre.

32. Which of these is a secondary source of energy for the brain

A. Carbohydrates B. Protein. C. fats. D. vitamins.

33. Which of these is a primary source of energy for the body

A. Carbohydrates B. Protein. C. fats. D. vitamins.

34. Fat soluble vitamins include the following except

A. A B. E C. C D. D

35. The following fall under saturated fats except

A. palm kernel oil B. palm oil C. cocoa butter D. olive oil

36. What makes protein ideal in all food nutrients?

A. Carbon B. nitrogen C. oxygen D. carbon-dioxide

37. Pernicious anaemia is as a result of lack of vitamin B

A. 6 B. 12 C. 3 D. 2

38. Pellagra is as a result of lack of vitamin B

A. 6 B. 12 C. 3 D. 2

39. A set of values that serve as standards for nutrient intakes for healthy persons.

A. DRI B. UL C. EAR D. RDA

40. Intake value sufficient to meet nutrient requirement of 97-98% of all healthy individuals in a group is referred to as
- A. DRI B. UL C. EAR D. RDA
41. Maximum intake level above which toxicity would increase is indicated by
- A. DRI B. UL C. EAR D. RDA
42. Intake value estimated to meet requirement of half the healthy individuals in a group is
- A. DRI B. UL C. EAR D. RDA
43. The passage process of digested nutrients through the walls of the intestines or stomach into the blood or lymph, where they are transported to the cells is
- A. Digestion B. Secretion C. absorption D. Metabolism
44. All the chemical processes by which nutrients are used to support life, including anabolism and catabolism is
- A. Digestion B. Secretion C. absorption D. Metabolism
45. This is the ability to acquire and use energy from the environment
- A. Digestion B. Secretion C. absorption D. Metabolism
46. Basal conditions include the following except
- A. not eaten food for at least 12 hours
- B. a night of restful sleep
- C. no strenuous activity is performed for at least 1 hour before the test
- D. Being tickled by your lover
47. Breakdown of large molecules into simple ones to produce energy is referred to as
- A. Catabolism B. Secretion C. absorption D. Metabolism

48. Food hygiene practices include the following except

- A. The consumption of food and influencing factors
- B. The prevention of food poisoning
- C. Personal hygiene
- D. Cleaning the Kitchen after use

49. The practices and associated attitudes that will determine what, when, why and how an individual will eat when alternatives are available to make a choice is his or her

- A. food pattern B. Food budget C. Food habits D. dieting

50. The science that deals with the process of prevention of decay or spoilage of food thus allowing it to be stored in a fit condition for future use is

- A. food pattern B. Food budget C. Food habits D. food preservation

ANSWER THE FOLLOWING, (TRUE) OR (FALSE). WRITE THE CORRECT ANSWER AGAINST THE QUESTION NUMBER

51. Vitamin B12 is a good source of energy

52. A person can survive longer without water than he can without certain vitamins and minerals.

53. Complex carbohydrates provide one with short term energy.

54. Protein is the body's preferred energy source.

55. Essential amino acids are amino acids that the adult body can synthesize in adequate amounts.

56. Males need more protein than females.

57. Fat soluble vitamins can be taken in excess without any danger.

58. Unsaturated fat is solid at room temperature.

59. The simplest form of carbohydrates is sugar.

60. If an excess amount of protein is ingested, it is converted to waste and is removed from the body.

61. A vegetarian is unable to consume all of the essential amino acids.

62. Excess iron may increase the risk of heart disease.

63. "My Pyramid" is the same for everyone.

64. All protein foods contains all of the essential amino acids.
65. Hippocrates is the father of medicine
66. Nutrients in the body make up 13-31% of the body
67. Protein, fats and carbohydrates are energy yielding nutrients
68. Variety means eating a balanced meals
69. The passage of digested nutrients through the walls of the intestines or stomach into the blood or lymph, where they are transported to the cells is digestion
70. The amount of a food or nutrient that is available for absorption after digestion is called absorption
71. Vitamin containing foods provide health benefits beyond their nutrient contributions
72. Functional foods provide health benefits beyond their nutrient contributions
73. A sore or ulceration in the lining of the stomach is called oesophageal ulcer
74. Spicy foods, Caffeine and Colas can cause ulcers
75. Only about 15% of those infected with H pylori develop ulcers.
76. Chronic use of NSAIDs may cause ulcers
77. Insulin controls blood glucose by promoting the storage of metabolic fuel.
78. Ketones in urine is not enough to diagnose someone of diabetes
79. Hypoglycaemia is a high blood glucose concentration
80. A secretagogue is a substance that causes another substance to be secreted
81. Exercise can improved blood lipids and blood pressure, with subsequent lower cardiovascular risks and overall mortality
82. Wasting is insufficient height gain relative to age
83. Stunting is insufficient weight gain relative to height/losing weight
84. Underweight is insufficient weight gain relative to age
85. Marasmus is used to describe the sickness of weaning.
86. Kwashiorkor can occur in infancy but its maximal incidence is in the 2nd yr
87. Marasmus represents an adaptive response to starvation
88. In Marasmus the body utilizes all muscles before using fat stores
89. Only children who have been weaned from their NG tube can be considered as being in the rehabilitation phase
90. F-75: Usually used during the rehabilitation phase

01. The WHO has recognized it as a ready-to-use-therapeutic food (RUTF) that can reverse malnutrition in severely malnourished children
02. Kwash & Marasmus-Kwash have greater risk of morbidity & mortality compared to Marasmus and underweight
03. The most important consideration when choosing something to eat is your income
04. Environmental Concerns involves use of synthetic fertilizers and pesticides
05. Deterioration or spoilage starts from the time food is harvested, slaughtered or manufactured
06. Salting is the commonest and probably the oldest method of preserving food
07. Hot food should be held at 140 °F or warmer
08. Fasting is when one has no choice, such as a famine
09. In starvation body switches to a wasting metabolism
100. Glucose is the only nutrient used by the brain
