

## **PATHOLOGY QUESTIONS**

1. What is the key distinction between disease and illness?

A. Disease is caused by supernatural forces, while illness is caused by pathogens

B. Disease is characterized by altered physiological processes, while illness is caused by genetics

**C. Disease refers to an entity with a cause, while illness refers to the reaction or symptoms**

D. Disease is managed in wards, while illness is managed in clinics

2. Which of the following is NOT one of the four cardinal signs of inflammation described by Celsus?

A. Redness (rubor)

B. Swelling (tumor)

C. Heat (calor)

**D. Weakness (debilitas)**

3. Majority of cardiovascular diseases are complicated by the following, except

A. diabetes

B. hypertension

C. obesity

**D. ulcer**

4. All the following are associated with the development congenital heart diseases, except

A. Rubella infection

B. alcohol

C. drugs

**D. obesity**

5. When there is an increase blood flow into the pulmonary circulation exposing the low-pressure, low-resistance pulmonary circulation to increased pressures and volumes leading to right ventricular hypertrophy it is termed as .....shunt.

**A. left to right**

B. right to left

C. atrioventricular

D. none of these

6. What theory postulated that illness resulted from an imbalance between four humors?

**A. Humoral theory**

B. Galenic theory

C. Vitalism theory

D. Mechanism theory

7. All the following can lead to left to right shunt, except

A. arterial septal defect (ASV)

**B. tetralogy of Fallot**

C. ventricular septal defect (VSD)

D. patent ductus arteriosus (PDA)

8. Which term describes the combination of symptoms caused by altered physiologic processes?

A. Disease

B. Illness

**C. Syndrome**

D. Pathology

9. An example of right to left shunt is .....

A. arterial septal defect (ASV)

**B. tetralogy of Fallot**

C. ventricular septal defect (VSD)

D. patent ductus arteriosus (PDA)

10. Malformation leading to a complete obstruction of blood flow is termed.....

**A. Artresia**

B. cyanosis

C. dextrocardia

D. situs inversus

11. The movement of red blood cells from the microvasculature to the site of inflammation is referred to as

A. Emigration

**B. Diapedesis**

C. Exudation

D. Adhesion

12. The leading cause of ischaemic heart disease is .....

**A. atherosclerosis**

B. diabetes

C. hypertension

D. stroke

13. What was the earliest concept of disease based on?

A. Scientific observations

**B. Curse from God or supernatural beliefs**

C. Humoral theory

D. Mechanism of disease

14. Who first described the four cardinal signs of inflammation, including rubor, tumor, calor, and dolor?

A. Hippocrates

**B. Cornelius Celsus**

C. Antony van Leeuwenhoek

D. Galen

15. Ischaemic heart disease can result in all the following, except

A. Asymptomatic

B. Angina

C. myocardial infarction

**D. coarctation**

16. Which theory suggested that life was influenced by vital substances under the control of the soul?

A. Humoral theory

B. Mechanism theory

**C. Vitalism theory**

D. Galenic theory

17. Which term refers to the loss of ease and departure from normal in relation to health and disease?

A. Vitalism

B. Pathology

C. Syndrome

**D. Disease**

18. Cancers may metastasis through these routes, except

A. Lymphatic spread

**B. Nasal spread**

C. Haematogenous spread

D. Body cavities spread

19.

20. All the following are types of angina pectoris, except

A. Stable

**B. continuous**

C. Prinzmetal

D. unstable

21. Which of the following is not an aetiology of cell injury?

A. Hypoxia

B. Ischaemia

C. Senescence

**D. Haemoglobin**

22. The protective factor in women against myocardial infarction is .....

A. Progesterone

B. oxytocin

**C. oestrogen**

D. testosterone

23. ST-segment elevated MI (STEMI) is also referred to as .....

**A. transmural**

B. Subendocardial

C. laminar

D. none of these

24. Who is known as "the father of histology" for his work in using microscopy to study tissues?

A. Antony van Leeuwenhoek

**B. Marcello Malpighi**

C. Hippocrates

D. Vesalius

25. Who introduced the concept of mechanism of disease based on the disequilibrium of four basic humours?

A. Plato

**B. Hippocrates**

C. Aristotle

D. Galen

26. Which of the following is/are characteristics of myocardial infarction?

A. ST segment elevation

B. T wave inversion

C. Deep Q waves

**D. All of these**

27. Which physician developed the first ever microscope and observed male spermatozoa?

A. Hippocrates

B. Vesalius

**C. Antony van Leeuwenhock**

D. Marcello Malpighi

28. The branch of pathology which deals with the study of diseases related to blood is known as?

A. Cytopathology

B. Immunopathology

**C. Haematology**

D. Chemical Pathology

29. Which of the following is NOT a process marking irreversible cell injury?

- A. Release of toxic free radicals
- B. Activation of endonucleases
- C. Inability to reverse mitochondrial dysfunction

**D. Repair of damaged plasma membrane**

30. Which type of necrosis combines features of coagulative and liquefactive necrosis?

- A. Coagulative necrosis
- B. Liquefaction (colliquative) necrosis

**C. Caseous necrosis**

- D. Fibrinoid necrosis

31. What is the main function of antioxidants in the context of cellular injury to?

- A. Destroy damaged cells
- B. Prevent apoptosis
- C. Induce necrosis

**D. Inactivate free radicals**

32. What happens when the functional demand on a cell increases?

- A. Reversible cell injury
- B. Irreversible cell injury
- C. Cellular aging

**D. Cellular adaptation**

33. Which of the following is the principal factor responsible for intrinsic genetic cellular aging?

- A. Consumption of harmful substances
- B. Environmental factors

**C. Telomere shortening**

- D. Telomerase enzyme activity

34. All tumours are made up of parenchyma cells and.....

**A. Supportive stroma**

B. Basal cells

C. Growth factors

D. Malignant tissues

35. Which type of inflammation is usually followed by healing and has a short duration?

**A. Acute inflammation**

B. Chronic inflammation

C. Subacute inflammation

D. Granulomatous inflammation

36. Complete or partial collapse of the lungs is termed as .....

A. Atresia

**B. Atelectasis**

C. Cor pulmonale

D. Stenosis

37. Myocardial infarction can be diagnosed by these serum enzymes, except

A. CK

B. CK-MB

C. Lactic dehydrogenase (LDH)

**D. all of these**

38. The chemical mediator which cause contraction of endothelial cells and increased vascular permeability?

A. Histamine

**B. Bradykinin**

C. Prostaglandins

D. Leukotriene B4 (LT-B4)

39. The formation of granulomas is associated with which chronic inflammation?

A. Chronic non-specific inflammation

B. Chronic suppurative inflammation

C. Chronic

fibrinous inflammation

**D. Chronic granulomatous inflammation**

40. .... is associated with rheumatic heart fever.

A. Staphylococcus

**B. Streptococcus**

C. Corynebacterium

D. None of these

41. Which cells are responsible for releasing protease, elastase, collagenase, and other substances during chronic inflammation?

A. Lymphocytes

**B. Macrophages**

C. Neutrophils

D. Eosinophils

42. Left ventricular hypertrophy is a hallmark of .....

A. stroke

**B. hypertension**

C. ischaemic heart disease

D. MI

43. The process which involves the replacement of injured tissue by fibrous tissue is known as?

A. Regeneration

B. Granulation tissue formation

**C. Repair**

D. Phagocytosis

44. The aspect of pathology concern with the study of derangements in the immune system is known as.

A. Immunology

B. Immunosuppression

**C. Immunopathology**

D. Immune

Dysfunction

45. Which type of immunity is considered non-specific and lacks antigenic specificity?

**A. Natural immunity**

B. Adaptive immunity

C. Specific immunity

D. Humoral immunity

46. Right ventricular dilation and/or hypertrophy is a characteristic of

**A. cor pulmonale**

B. hypertension

C. ischaemic heart disease

D. MI

47. The type of immune response involving the formation antibodies by B cells is related to?

A. Cellular immunity

B. Innate immunity

**C. Humoral immunity**

D. Adaptive immunity

48. What are the main components of specific or adaptive immunity?

A. Neutrophils and macrophages

B. Complement and antibodies

C. T cells and macrophages

**D. B cells and T cells**

49. The type of hypersensitivity reaction characterized by anaphylaxis and rapid onset of symptoms, such as hay fever and asthma?

**A. Type I**

B. Type II

C. Type III

D. Type IV

50. In which type of hypersensitivity immune reaction does tissue injury occur due to cell-mediated immune response without the formation of antibodies?

A. Type I

B. Type II

C. Type I

**D. Type IV**

51. Which of the following microorganisms is responsible for causing tuberculosis?

A. Virus

**B. Bacteria**

C. Fungus

D. Parasite

52. The following are the Fate of cells in irreversible cell injury, except

A. Apoptosis

B. Necrosis

C. Autolysis

**D. Gangrene**

53. What is the primary focus of Forensic pathology and autopsy work?

A. Analyzing biochemical constituents of body fluids

B. Studying diseases of blood

C. Examining tissues removed from living bodies

**D. Investigating organs and tissues postmortem for medicolegal purposes**

54. Healing that occurs when a clean laceration or a surgical incision is closed with sutures is called ..... Healing.

**A. First intention**

B. Second intention

C. Quaternary intention

D. Secondary union

55. Which of the heart valves is frequently involved in deformities?

A. Aortic

B. Tricuspid

C. Pulmonary

**D. Mitral**

56. Which of the following viral infection is characterized by a sudden onset of high fever, chills, myalgia, headache, and jaundice?

A. Influenza

**B. Yellow fever**

C. HIV/AIDS

D. Malaria

57. What is the term for a mass of tissue formed as a result of abnormal, excessive, uncoordinated, autonomous, and purposeless proliferation of cells?

A. Epidermis

B. Metastasis

**C. Neoplasm**

D. Neoplasia

58. Which type of tumour proliferates rapidly, spreads throughout the body, and can cause death?

A. Benign

**B. Malignant**

C. Labile

D. Stable

59. Which route of transmission involves the spread of infection through physical contact or faecal contamination?

**A. Direct transmission**

B. Indirect transmission

C. Airborne transmission

D. Vector-borne transmission

60. Which type of malaria is associated with a distinctive feature of high foetal mortality and low birth weight due to infection of the maternal sinuses of the placenta?

A. Plasmodium vivax

**B. Plasmodium falciparum**

C. Plasmodium ovale

D. Plasmodium malariae

61. Which type of microorganism is responsible for the disease known as "black death"?

**A. Bacteria**

B. Virus

C. Fungus

D. Parasite

62. Which of the following is considered as the key to managing the spread of infection?

A. Strengthening host immunity

B. Eradicating all pathogens

**C. Breaking the chain of transmission**

D. Increasing antibiotic use

63. When the immune system fails to recognise self from non-self it results in

A. Hypersensitivity

**B. Autoimmune diseases**

C. Carcinoma

D. Anaphylaxis

64. *Yersinia pestis* is the causative agent for .....

A. Leprosy

B. Anthrax

C. Typhoid

**D. Plague**

65. All the following are classifications of pneumonia, except

A. lobar

B. lobular

C. interstitial

**D. striated**

66. Infants treated for neonatal ARDS with oxygen and assisted ventilation are likely to develop..... as a complication.

**A. Bronchopulmonary dysplasia**

B. asthma

C. pneumonia

D. none of these

67. Which type of cell injury is characterized by a variety of stresses encountered by a cell due to changes in its internal and external environment?

A. Genetic injury

B. Cellular adaptation

**C. Reversible cell injury**

D Irreversible cell injury

68. Candidiasis is an opportunistic fungal infection that is commonly caused by which species of fungus?

A. Aspergillus fumigatus

B. Cryptococcus neoformans

**C. Candida albicans**

D.Histoplasma capsulatum

69. Which type of infection is characterized by thick, yellow, curdy vaginal discharge and pruritic lesions?

A. Cutaneous candidiasis

B. Systemic candidiasis

C. Oral thrush

**D. Candidal vaginitis**

70. Lack of differentiation in malignant tumours is termed as

A. Dedifferentiation

B. Metaplasia

C. Atrophy

**D. Anaplasia**
