

SURGICAL

1. All the following are classifications of surgery according to urgency EXCEPT:

- A. Emergency
- B. Optional
- C. Planned
- D. Major

2. All the following are parts of Peri-Operative Nursing care EXCEPT:

- A. Physical
- B. Physiological
- C. Psychological
- D. Psycho-economical

3. The following are signs of inflammation EXCEPT:

- A. Heat
- B. Pain
- C. Redness
- D. Rashes

4. The immediate observation done on a patient returning from surgery (post-operation) is...

- A. Level of consciousness
- B. Operated site
- C. Pressure areas
- D. Vital signs

5. The systematic techniques performed by a surgeon prior to operation are:

- A. Gowning, scrubbing & gloving
- B. Gloving, gowning & scrubbing

C. Scrubbing, gloving and gowning

D. Scrubbing gowning & gloving

6. Which of the following is a systemic manifestation of inflammation?

A.Fever

B. Loss of function

C. Pain

D. Swelling

7. In the operating rooms, sterile environment is to be maintained hence all personnel should wear protecting clothing called:

A. Sterile dress

B. Scrub dress

C. Operation dress

D.Theatre Gown

8. Which of the following is NOT used in the theatre?

A. Cap

B.Theatre shoes

C. Gloves

D. Gown

9. The type of surgery that must be done within 24-48 hours to prevent further damage to the patient is called :

A. Elective

B.Planned

C. Optional

D.Urgent

10. Nancy Peterson is scheduled for surgery, he is to go through pre-operative preparation. What is the purpose of preoperative preparation?

- I. Builds up patient's body for surgery
- II. Provide answers to patients and families questions concerning the impending surgery
- III. Offer support and understanding for patient's feelings
- IV. Offer financial support to patient for surgery

A. I only

B. I & II

C. II & III

D. I, II, I, IV

11. The following are advantages of ambulatory surgery EXCEPT:

- A. Convenient to patient
- B. Complications are reduced
- C. Convenient to surgeon

D. There is flexibility in scheduling physician

12. Which of the following is NOT a complication of Surgery?

- A. Infection
- B. Keloid
- C. Pain

D. Phlebitis

13. In the theater which category of staff usually runs errands for the surgery to be successful?

A. Assistant surgeon

B. Circulating nurse

C. Scrub nurse

D. Student nurse

14. Why should we scrub our hands before assisting a surgery in the theater?

A.To reduce the number of organisms on our hands

B. To keep our hands very clean

C. To promote faster wound healing

D. Ensure the sterile hands

15. A patient is taught to perform deep breathing, coughing and splinting exercise before surgery, which of the following is NOT a reason for coughing exercise post-operatively.

A. Allow full aeration

B. Keep lungs clean

C. Promote expectoration after surgery .

D. Prevent hypertension after surgery

16. Which of the following nursing actions would help the patient decrease anxiety during the preoperative period?

A. Explaining all the procedures thoroughly in chronological order

B. Spending time listening to the patient

C. Encouraging sleep and limiting interruptions

D. Reassuring the patient that the surgical staff are competent

17. Which of the following is the primary purpose of maintaining NPO for 6 to 8 hours before surgery? To prevent ..

A. electrolyte imbalance

B.aspiration

C. aspiration pneumonia

D. intestinal obstruction

18. All the following ensure validity of information written consent EXCEPT.

A. The patient legal age with proper mental disposition

B. The consent has been secured within 24 hours before surgery

C. If the patient is unable to write secure consent from a relative

D. The consent is secured before the administration of a drug that alters level of consciousness.

19. Which of the following drugs is administered to minimize respiratory secretions preops?

A. Atropine

B. Diazepam (Valium)

C. Nubain

D. Phenergan

20. Which of the following is experienced by the patient who undergoes spinal anesthesia? The patient experiences.....

A. amnesia

B. consciousness

C. loss of sensation

D. unconscious

21. Which of the following is NOT a complication of Surgery?

A. Infection

B. Keloid

C. Pain

D. Phlebitis

22. In diagnosing Prostate cancers, what is the most appropriate diagnosing measure?

A. Alkaline Phosphate level

B. CT Scan

C. Permission Emission Tomography

D. Prostatic Specific Antigen

23 The primary function of a scrub nurse is to.....

A. Assist with counts and records

B. Coordinate the need of the surgeon

C. Maintain the sterility of the operation

D. Prepare the patient for the recovery room

24. Which of the following primarily prevents post-operative complications

A. early ambulation

B. administration of antimicrobials

C. adequate fluid intake

D. wound dressing

25. A patient is maintained on Nil per OS to prevent

I. Abdominal pain

II. Aspiration

III. Full stomach

IV. Vomiting

A. I ONLY

B. I and IV ONLY

C. II, III and IV ONLY

D. I, II and IV ONLY

26. During the immediate postoperative period the nurse should give the highest priority to.....

A. checking and recording vital signs every 15 minutes

B. maintaining a patent airway

C. observation for haemorrhage

D. recording intake and output

27. Ama, a 5 year old girl had a repair of cleft palate. Which of the following types of surgery should be performed?

A. Ablative

B. Constructive

C. Prophylactive

D. Reconstructive

28. Agbeko who has undergone laparotomy five days ago is due for change of dressing.

The principles behind changing a surgical dressing of a patient is to:

A. Confine the microorganisms to the wound

B. Keep the sterile field free from micro-organisms

C. Reduce the number of opportunistic micro-organisms to a minimum

D. Protect yourself from microorganisms

29. Mr Adjetey Mensah is on admission with prostate cancer. A priority nursing diagnosis for Mr. Mensah would be..

A. Anxiety related to inability to void

B. High risk for infection related to bacteria invasion of the incision

C. Knowledge deficit related to post-operative management

D. Pain related to the surgical incision and bladder spasms

30 Which of the following is NOT a characteristic of malignant tumour.

A. It is enclosed in a capsule of fibrous tissue

B. It is recognised as cirrhosis on histology

C. Many cells undergoing active mitosis can be seen within the tumour

D. The tumour tends to spread rapidly

31 The action to be taken when the nurse suspects that a patient's wound is infected is to

A. Change the dressing aseptically

B. Clean the wound with a bactericidal solution twice daily

C. Observe site of the wound daily

D. Take a swab for bacteriological examination

32. Which part of the theatre is referred to as the "operating field"?

A. Inside the theatre where all equipment are placed

B. the mayo's table with the instruments arranged on it.

C. the patient lying on the table, draped and ready to be operated on.

D. the use of sterile dressing and adhesives

32. When signing a form as a witness, your signature shows that the client:

A. Is fully informed and is aware of all consequences

B. Was awake and fully alert and not medicated with narcotics

C. Was free to sign without pressure and understands the language of the form

D. All of the above

33. A patient who is to receive radiation for breast cancer says to the nurse, "my family said I will get radiation burns" the best response by the nurse would be

A. A localized skin reaction usually occurs

B. Daily application of an emollient will prevent the burns

C. Have they had experience with this type of radiation?

D. It will be no worse than being in a hair dryer

34. A manifestation of cancer of the cervix that will bring the patient to the hospital is

A. Bloody spotting after intercourse

B. Foul smelling discharge

C. heaviness in the abdomen

P. Pressure symptoms on the bladder

35. Obtaining informed consent is the responsibility of the.....?

A. Nurse

B. Nurse assistant

C. Physician

D. Nurse-in-charge

36. Kwame is receiving analgesics after surgery. How often would it be given?

A. As often as patient request for it

D. According to Surgeon's prescription

C. Every 30 minutes

D. Whenever necessary

37. A nurse will do all the following in case a patient has evisceration EXCEPT

A. Call the Surgeon

B. Instruct patient to stay calm

C. Prepare patient for theatre

D. Try and push back contents of abdomen,

38. Gilbert, a 12 years old boy had incision and drainage for injection abscess of the gluteal muscle. Which position should the boy adopt?

A. Dorsal

B. Prone

C. Recumbent

D. Lateral

39 The primary objective in passing NG tube postoperatively in abdominal surgery is

A. Prevent aspiration of the stomach contents

B. Prevent accumulation of gas

C. Prevent stomach from over distension

D. Provide a means of feeding the patient postoperatively

40 A nurse is assessing a patient for constipation. Which of the following is the first review that the nurse should conduct in order to identify the cause of the constipation?

A. activity levels

B. alcohol consumption

C. current medication

D. usual pattern of elimination

41 Which of the following would a nurse use when removing old dressing from a wound?

A. Cheadle forceps

B. Examination gloves

C. Surgical gloves

D. Utility gloves

42 Human papilloma virus is known to be associated with.....

A. cervical cancer

B. Gastric ulcer

C. Hypertoceluler cancer

D. Lymphoma

43. Kofi Peters, a cancer patient was diagnosed as being in grade III of cancer. Which of the following best describes a grade III of cancer. Cells are ...

A. slightly different from normal cells from which the tumour arise

B. more abnormal and are moderately differentiated

C. more abnormal and are poorly differentiated

D. immature and anaplastic

44. In the staging of cancers, what does stage is M4 of cancer mean.

A. Isolated metastasis confined to one organ

B. multiple organ involvement involvement with minimal functional impairment

c. Multiple metastasis confined to one organ with no functional impairment

D. No metastasis

45. A manifestation of cancer of the cervix that will bring the patient to the hospital is

A. Bloody spotting after intercourse

B.Foul smelling discharge

C. heaviness in the abdomen

D. Pressure symptoms on the bladder

46. A patient has been admitted with burns involving the whole face, what type of surgery will be done to restore the face to normalcy?surgery.

A. Ambulatory

B.Cosmetic

C. Diagnostic

D. Simple

47. Yaa Mansah is very much worried about a scheduled hysterectomy, the nurse should therefore

A. Tell her that her surgeon is very competent

B. Change the topic when her fear is obvious

C. Tell her the operation is necessary

D. Give her a chance to express her fear

Choose the descriptions most appropriate from list B to answer questions 14-18

- | | |
|--------------------------|---|
| 48. Contused wound | ANS ... Caused by blunt objects |
| 49. Sarcoma | ANS... Malignant tumour of connective tissue |
| 50. Green stick fracture | ANS... Common in children |
| 51. Metastasis | ANS.. Spread of cancer cells into other parts of the body |

B

- A. Occurs at the ankle joint and foot often displaced outward
- B. Common in children
- C. Dinner fork
- D. Malignant tumour of connective tissue
- E. Caused by blunt objects
- F. Fracture occurring at an angle across the bone
- G. Spread of cancer cells into other parts of the body
- H. Infusion of normal tension with blood plasma
- I. Movement of cells.
